STUDENT OBLIGATIONS

Lecture attendance	Minimum points are 3 (min 6 hours of lectures), and maximum are 6 points (max 12 hours of lectures) for class attendance.
Seminars attendance	Minimum points are 4 (min 8 hours of seminar), and maximum are 6 points (max 12 hours of seminar) for class attendance.
Practicals attendance	Minimum points are 4 (min 20 hours of exercises), and maximum are 6 points (max 30 hours of exercises) for class attendance.
Active participation in seminars and practicals	For exercises and seminar activities maximum points are 10 (35 points out of three grading elements), and minimum are 5 points (min 16 points out of three grading elements): a) prepared for exercises and seminars and b) successful experimental work (total 35, coefficient 0.2857). Five point is for successful preparation for exercises and seminars gained by oral examination. One point is for successful exercises, signed in student notebook. Preparation for exercises and seminars is 10 points (total 20),

	and each successful experimental work is 1 point (total 15 points for 15 exercises).
Final exam	Final written exam has 40 questions (1 question = 1 point). A student must give correct answers to 24 questions in order to gain a minimum of 24 points. Maximum is 40 points.
Examination requirements	Student requirements are defined in the Regulations on the Integrated Undergraduate and Graduate Study of Veterinary Medicine. Given the above, the student must acquire a minimum number of points from all assessment elements in order to take the final exam. Article 45: a student can justifiably be absent from up to 50 % of the lectures; 30% of the seminars and 30 % of the exercises.

OBJECTIVES AND LEARNING OUTCOMES

Course objectives	<p>Microbiology is an important preclinical course where students are prepared for further understanding of lessons in General pathology and pathological morphology, Pharmacology and clinical courses such as infectious diseases and microbial intoxication of animals. Procedures of sterilization, of sampling and sending different materials for further microbiological and immunological tests, simple procedures of microorganism identification, including use of commercial compounds suitable for veterinarians in practice will be offered throughout practical work to students attending the course. Lessons and practices in microbiology offer basic knowledge on morphology, physiology, specific qualities of cultivation and identification, antigen properties, tenacity, relation to antimicrobial substances, pathogenicity of particular microorganisms and methods of aetiological diagnostics as well as possibilities of immunoprophylaxis of infectious diseases.</p>
Learning outcomes	<p>After successfully passing the course student will be able to:</p> <ol style="list-style-type: none"> 1. Understanding the basic principles and techniques for isolation and identification of pathogenic microorganisms, and what diagnostic tests should be performed for their identification; 2. Interpreting the meaning of the results of microbiological examination in the process of etiological diagnosis of infectious diseases; Information of classification the bacteria, viruses and fungi with genera and species important for veterinary medicine; 3. Knowledge about specifics of microorganism grows, virulence properties of microorganism and disease it causes; 4. Understanding what specimens should be collected and get acquainted with preventive and therapeutic strategies.
