UNIVERSITY OF ZAGREB

Address:

University of Zagreb Trg Republike Hrvatske 14, Zagreb Phone: +385 1 4564111 e-mail: **unizginfo@unizg.hr**

The University of Zagreb (Universitas Studiorum Zagrabiensis) is the biggest and the oldest university in Croatia as well as in South-East Europe. The university was founded in 1669 by King Leopold I who issued a decree granting the status and privileges of a university to the Jesuit Academy. The university now consists of 30 faculties, three art academies and the University Centre "Croatian Studies". Over 50.000 students attend study

programmes in fields of Biotechnology, Biomedicine, Social and Humanistic Sciences, Natural Sciences, Engineering and Arts. Complete information can be gotten at the University web site <u>www.unizg.hr</u> (Source: <u>www.unizg.hr/homepage</u>)

GENERAL FACTS ON FACULTY OF VETERINARY MEDICINE – ZAGREB

Source: Bregeš

Faculty of Veterinary Medicine, University of Zagreb was founded in 1919 as a four year college. On 7 December 1924 the school was renamed into the Faculty of Veterinary Medicine and it became a part of the University of Zagreb. Since then it has been the only faculty of that kind in the Republic of Croatia. The Faculty comprises a number of premises; lecture and teaching rooms, computer laboratories and laboratories and facilities where large and small animals are kept. Well equipped infrastructure provides conditions for scientific research, teaching as well as cooperation with the economic sector (agriculture, biotechnology, animal origin food production). Striving to achieve international high teaching standards the Faculty has been successfully evaluated by EAEVE (European Association for the Establishment of the Veterinary Education) since 2002. The changes appointed by the EAEVE expert team are included in the new curriculum. Study programme is aligned with the Bologna structure.

Also, all the ISO 9001 Bureau Veritas criteria concerning the quality control are met and Faculty possess its valid certificate.

Teaching, scientific and highly skilled activities of the Faculty are based on the work of departments and clinics integrated since academic year 2005/06 into four departments: Basic and Pre-clinical Sciences Division, Animal Production and Biotechnology Division, Clinical Division and Veterinary Public Health and Food Safety Division. The fifth department, Management, Chairs and Technical Services besides an office

manager and accounting, also include IT section, Central library as well as Chair of Foreign Languages and Chair of Physical Training.

Since the beginning of the academic year 2005/06 the Faculty of Veterinary Medicine of the University of Zagreb has been implementing the new curriculum entitled University study of Veterinary medicine. The study lasts for six years (12 semesters) – 360 ECTS points.

Experiences at and recommendations by a number of leading veterinary institutions of higher education in the world, particularly of the European Association of Establishments for Veterinary Education (EAEVE), were acknowledged in drafting the new curriculum. Most teaching such as lessons, seminars, practical work and other forms of consultations are performed within the Faculty tract situated in the south east Zagreb.

The premises include 12 buildings with teaching rooms, student practicum, laboratories and computer laboratories. Completely refurbished large lecture room with the most sophisticate equipment offers an opportunity for multimedia and teleconference presentations. Moreover, better working conditions have been achieved due to involment in a framework of IVSA-Croatia (International Veterinary Students Association) and Equus (Veterinary Medicine Student Association) activities by recently remade student premises.

European Association of Establishments for Veterinary Education (EAEVE) http://www.eaeve.org

GENERAL INFORMATION ABOUT THE PROPOSED STUDY PROGRAM

NAME OF THE STUDY PROGRAM

INTEGRATED UNDERGRADUATE AND GRADUATE UNIVERSITY STUDY OF VETERINARY MEDICINE IN ENGLISH

PROVIDER OF THE STUDY PROGRAM

FACULTY OF VETERINARY MEDICINE UNIVERSITY OF ZAGREB

TYPE OF THE STUDY PROGRAM

University study program

LEVEL OF THE STUDY PROGRAM

Integrated undergraduate and graduate study

ACADEMIC/PROFESSIONAL TITLE UPON COMPLETION OF THE STUDY

Doctor of veterinary medicine

SCIENTIFIC AREA OF THE STUDY PROGRAM

Area: Biomedicine and health, field: Veterinary medicine

DURATION OF THE STUDY PROGRAM AND MINIMUM NUMBER OF ECTS CREDITS

The study lasts 6 years or 12 semesters. For each completed year, a student earns 60 ECTS credits. Upon completion of the study, minimum of 360 ECTS credits are earned.

REASONS FOR STUDY IN ENGLISH

The fundamental reason for the promotion of organization and conduct of the study program in English lies in the need to provide a university study in veterinary medicine in English within the University of Zagreb and the Republic of Croatia. Initiation of the first university study of veterinary medicine in the English language in the Republic of Croatia occurs as response to a recognized need, and as preparation for global work environment, for the education of doctors of veterinary medicine in English. We believe that the establishment of the study in English is yet another contribution to the international recognition of the University and our Faculty and that it will prepare students for work in an open international market. Additional interest for enrolment in the study program at the Faculty of Veterinary Medicine in Zagreb comes from students from the non-EU countries and this interest rose especially after Croatia joined the EU.

The importance of starting the study program in English is also found in the regional integration with the European area of higher education (EHEA) since the Veterinary faculties in the region do not have studies in English. The realization of this set goal would position our Faculty as the leading institution of higher education in the region in the field of veterinary medicine. Establishment of the study in English in Croatia would ensure the competitiveness and distinctiveness of the program and a greater mobility of students and lecturers. The objective of the establishment of the aforementioned study is that its scientific and teaching activity primarily contributes to the development of Croatia, but also the region as a whole. The study is designed in a way that it meets the criteria of the curricula of the veterinary faculties which are carried out within the European Union and which are accredited by EAEVE.

The idea to initiate the study of veterinary medicine at the Faculty of Veterinary Medicine, Zagreb has matured for a number of years. Also, one of the reasons for starting the study in English is to encourage parallel conduct of studies in Croatian and English language in order to offer equal opportunities to local students to attend studies in Croatian and English, but also to attract foreign students from the Europe and other continents. The Faculty of Veterinary Medicine, University of Zagreb recognizes the fact that a large number of Croatian citizens and people of Croatian origin live abroad, and it therefore sees a great potential of academic involvement and launch of powerful mechanisms of international exchange and cooperation.

By establishing the study in English, the Faculty of Veterinary Medicine will respond to the needs of Croatian citizens from the region and the world, who have in the last few years shown a steady interest in education at the Faculty of Veterinary Medicine in Zagreb. In addition to Croatian citizens who would like to study from the very beginning in the English language, there are a number of other interested groups.

Thus, the proposed program of study in English could be enrolled by:

1. Candidates who are BSc in natural or biomedical sciences;

2. Candidates who completed at least four years of secondary education abroad, in a country that has an *established* system of external evaluation of secondary education;

3. Candidates who passed internationally recognized SAT Reasoning Test;

4. High school graduates from the Republic of Croatia and Diaspora / international students with a high school diploma;

5. Foreign students using EU mobility program and other exchange programs (e.g. ERASMUS, CEEPUS, AUF and the like)

6. Students who wish to attend courses only in part of the academic year or who would like to attend an elective course.

Today, the Faculty is a public institution of higher education which, as a constituent part of the University of Zagreb (hereinafter: the University), organizes and implements university and vocational studies and develops scientific and professional work in the educational and scientific field of biomedicine and health care, the field of veterinary medicine. The Faculty is a legal entity entered into the Register of Higher Education Institutions and the Register of Scientific Research Legal Entities, kept by the Ministry of Science, Education and Sports of the Republic of Croatia. The current program of study is the fundamental in education in the field of veterinary medicine. We have formed the new program of study in English as a faithful copy of the program in the Croatian language. The number of core and elective courses and three study tracks are completely identical in both study programs.

The diploma is equivalent to the diploma received by students who complete the current Croatian degree program. The program in English has clearly expressed learning outcomes and described qualifications that are stated in the Diploma Supplement (DS).

The program is designed as a combination of basic courses, preclinical and clinical veterinary subjects, which provide a broad education to every doctor of veterinary medicine. During lectures, seminars/tutorials and practicals, students receive the necessary skills and techniques related to the selected studies in English, especially during seminars and practicals in which they acquire practical knowledge directly with the help of university teachers and prominent experts in veterinary practice. In order to easily master the work techniques and get quickly involved in the business practice and professional performance of tasks for which they have been preparing during the study, attention has been given to mandatory practical training of participants during the two final years of the study, which is carried out in appropriate facilities and institutions. This allows employers to meet potential employees while students can have easier insight into their own knowledge, skills and the actual preparation for entry into the world of modern veterinary practice. Upon enrolment in the fifth year of study, students have the option to choose between one of the three study tracks:

- 1. Small Companion Animals (SCA)
- 2. Farm Animals and Horses (FAH)
- 3. Veterinary Public Health (VPH)

The course content in the existing three study tracks within the study program covers numerous current gains and follows developmental dynamics that are distributed in the framework of various academic sub-disciplines. They are designed to encourage the real interest of students for one of the selected fields of veterinary profession as well as their creativity. The selected study track provides them with essential theoretical knowledge and all the essential practical applications and skills in each of the selected segments of veterinary activity, as well as activities that are associated with it. Particular emphasis is placed on building students' competencies through teamwork in small groups. Students thus actively learn how to solve problems, gain experience in team work and conduct of business.

Clinical teaching for all the assigned students starts from the 3rd year of study. Practical training in food hygiene and public health is ensured in slaughterhouses, markets, meat processing factories, dairies as well as laboratories. Laboratory skills, as well as principles of work safety in laboratories are taught from the first year onwards.

Continuous modernization of working and teaching spaces, laboratories and clinics resulted in an increased interest of foreign students, participants in postgraduate specialist studies and in the owners' selection of the Faculty as the location for the treatment of their companion animals and farm animals. The Faculty has so far become well-defined as a regionally recognizable institution in the field of education and professional-clinical work.

The current program of study which is now conducted in Croatian, received Accreditation for the conduct at the Faculty of Veterinary Medicine by the Ministry of Science, Education and Sports of the Republic of Croatia based on the prior positive opinion of the National Council for Higher Education.

Upon completion of the study at least 360 ECTS credits are earned. The study is conducted at the seat of the higher education institution in Vjekoslava Heinzela Street 55, 10 000 Zagreb. Academic degree is stated as: doctor of veterinary medicine. The occupation doctor of veterinary medicine in the Republic of Croatia belongs to the group of regulated professions, therefore the study program is largely harmonized with the provisions of Directive 2005/36/ EC, as well as the Law on regulated professions and recognition of foreign professional qualifications (OG124/09). Pursuant to the above mentioned, the Faculty determined that the study shall be carried out as integrated study, in one educational cycle of six years.

	Total hours of obligatory courses:	0	0	180	180	28
	Biological Traces and Evidences in Forensic Veterinary Medicine	2	7+2	4	0	1
Elective Subject * MIN 2,	Advanced Diagnostics and Therapy of the Diseases of the Digestive System of Dogs and Cats	10	11	4	0	2
	Veterinary Emergency and Critical Care Medicine	0	0	25	0	2
ECTS	MAX 7 ECTS Diseases of Honeybees in Contemporary Production		2	2	5	1
	Fishery	3	4	0	8	1
	Organic Poultry and Game Birds Production	10	10	4	6	2

*for students who want to enroll for more than the minimum of ECTS credits, the offer includes all elective courses from the entire study program

REGISTRATION AND EXAMINATION REQUIREMENTS SCHEME

I SEMESTER		
SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PHYSICS AND	-	
BIOPHYSICS		
MEDICAL CHEMISTRY	-	
ZOOLOGY	-	
BOTANY IN	-	
VETERINARY		
MEDICINE		
ANATOMY WITH	-	
ORGANOGENESIS OF		
DOMESTIC ANIMALS I		
ENVIRONMENT,	-	
ANIMAL BEHAVIOUR		
AND WELFARE		
BASIC STATISTICS IN	-	
VETERINARY		
MEDICINE		
INTRODUCTION TO	-	
VETERINARY		
PHYSICAL EDUCATION	-	

II SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II	-	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I must be completed
BIOCHEMISTRY IN VETERINARY MEDICINE	Pending completion of the course MEDICAL CHEMISTRY*	MEDICAL CHEMISTRY must be completed
HISTOLOGY WITH GENERAL EMBRYOLOGY	-	
ANIMAL BREEDS CHARACTERISTICS	-	
INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY I.	-	
PHYSICAL EDUCATION	-	

III SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PHYSIOLOGY OF DOMESTIC ANIMALS I	MEDICAL CHEMISTRY must be completed	PHYSICS IN BIOPHYSICS, BIOCHEMISTRY IN VETERINARY MEDICINE, ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II, HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed
MOLECULAR BIOLOGY AND GENOMICS IN VETERINARY MEDICINE	BOTANY IN VETERINARY MEDICINE, MEDICAL CHEMISTRY, BIOCHEMISTRY IN VETERINARY MEDICINE and ZOOLOGY must be completed	BOTANY IN VETERINARY MEDICINE, MEDICAL CHEMISTRY, and BIOCHEMISTRY IN VETERINARY MEDICINE and ZOOLOGY must be completed.
BASIC ANIMAL NUTRITION	MEDICAL CHEMISTRY must be completed.	MEDICAL CHEMISTRY must be completed.
ANIMAL BREEDING AND PRODUCTION	Pending completion of BASIC STATISTICS IN VETERINARY MEDICINE and ANIMAL BREEDS CHARACTERISTICS	
HYGIENE AND HOUSING OF ANIMALS	-	
VETERINARY IMMUNOLOGY	-	
ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III	-	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I and ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed.
INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY II	_	INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY I must be completed.

IV SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PHYSIOLOGY OF	Pending completion of PHYSIOLOGY OF	PHYSIOLOGY OF DOMESTIC
DOMESTIC ANIMALS II	DOMESTIC ANIMALS I*	ANIMALS I must be completed.
APPLIED ANIMAL NUTRITION	Pending completion of BASIC ANIMAL NUTRITION*. BIOCHEMISTRY IN VETERINARY MEDICINE must be completed	BASIC ANIMAL NUTRITION and BIOCHEMISTRY IN VETERINARY MEDICINE must be completed.
ANIMAL BREEDING AND PRODUCTION	Pending completion of the course ANIMAL BREEDING AND PRODUCTION from the 3rd semester*	ANIMAL BREEDS CHARACTERISTICS and BASIC STATISTICS IN VETERINARY MEDICINE must be completed.
HYGIENE AND HOUSING OF ANIMALS	Pending completion of HYGIENE AND HOUSING OF ANIMALS from the 3rd	ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE must be
	semester*	completed.
GENERAL MICROBIOLOGY	Pending completion of the course VETERINARY IMMUNOLOGY*	

V SEMESTER	Deviated in a second se	
SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PARASITOLOGY AND PARASITIC DISEASES	PHYSIOLOGY OF DOMESTIC ANIMALS I., PHYSIOLOGY OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II, ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.	All compulsory courses from 1 st – 4 th semester must be completed.
GENERAL VETERINARY PATHOLOGY	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., HISTOLOGY WITH GENERAL EMBRYOLOGY, PHYSIOLOGY OF DOMESTIC ANIMALS I., and PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., HISTOLOGY WITH GENERAL EMBRYOLOGY, PHYSIOLOGY OF DOMESTIC ANIMALS I., and PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.
RADIATION HYGIENE	PHYSICS AND BIOPHYSICS and PHYSIOLOGY OF DOMESTIC ANIMALS I must be completed.	PHYSICS AND BIOPHYSICS and PHYSIOLOGY OF DOMESTIC ANIMALS I must be completed.
PATHOPHYSIOLOGY I	All first year courses must be completed and pending completion of the courses PHYSIOLOGY OF DOMESTIC ANIMALS I and PHYSIOLOGY OF DOMESTIC ANIMALS II*	PHYSIOLOGY OF DOMESTIC ANIMALS I and PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.
PHARMACOLOGY	All first year courses must be completed and pending completion of the courses PHYSIOLOGY OF DOMESTIC ANIMALS I. and PHYSIOLOGY OF DOMESTIC ANIMALS II.*	PHYSIOLOGY OF DOMESTIC ANIMALS I. and PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.
SPECIAL MICROBIOLOGY	VETERINARY IMMUNOLOGY and GENERAL MICROBIOLOGY must be completed.	VETERINARY IMMUNOLOGY and GENERAL MICROBIOLOGY must be completed.

*All classes attended, but final exam(s) yet to be taken

VI SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
SPECIAL VETERINARY PATHOLOGY	Pending completion of GENERAL VETERINARY PATHOLOGY and passed midterms*	GENERAL VETERINARY PATHOLOGY must be completed.
PATHOPHYSIOLOGY II	Pending completion of the course PATHOPHYSIOLOGY I*	PATHOPHYSIOLOGY I must be completed.
CLINICAL PROPEDEUTICS	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.

VII SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
INTERNAL MEDICINE	Pending completion of CLINICAL PROPEDEUTICS.* SPECIAL VETERINARY PATHOLOGY must be completed.	SPECIAL VETERINARY PATHOLOGY and CLINICAL PROPEDEUTICS must be completed.
SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY I.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.
GENERAL AND CLINICAL RADIOLOGY	Pending completion of the course CLINICAL PROPAEDEUTIC, GENERAL VETERINARY PATHOLOGY and SPECIAL VETERINARY PATHOLOGY*.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.
GAME BREEDING AND MANAGEMENT	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.

*All classes attended, but final exam(s) yet to be taken

VIII SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II	Pending completion of the course SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY I from the 7th semester.*	SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY I must be completed.
OBSTETRICS AND REPRODUCTION I	SPECIAL VETERINARY PATHOLOGY and CLINICAL PROPAEDEUTIC must be completed.	SPECIAL VETERINARY PATHOLOGY and CLINICAL PROPAEDEUTIC must be completed.
BIOLOGY AND PATHOLOGY OF BENEFICIAL INSECTS	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.
BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.
TOXICOLOGY	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY, PATHOPHYSIOLOGY I, PATHOPHYSIOLOGY II, PHARMACOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY, PATHOPHYSIOLOGY I, PATHOPHYSIOLOGY II, PHARMACOLOGY must be completed.
METHODS OF PHYSICAL THERAPY AND DIAGNOSTICS	Pending completion of the course GENERAL AND CLINICAL RADIOLOGY, GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY.*	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.

*All classes attended, but final exam(s) yet to be taken

IX SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
INFECTIOUS DISEASES OF DOMESTIC	All courses from years 1 to 3 must be completed, with attendance of the 4th year	-
ANIMALS	courses.	

SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY III	Pending completion of the course SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II in the 8 th semester.*	SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II must be completed.
OBSTETRICS AND REPRODUCTION II	Pending completion of the course OBSTETRICS AND REPRODUCTION I in the 8 th semester.*	OBSTETRICS AND REPRODUCTION I must be completed.
FOOD HYGIENE AND TECHNOLOGY	All courses from years 1 to 3 must be completed, with attendance of the 4th year courses and examinations passed in the following subjects: INTERNAL MEDICINE (7th semester) AND GAME BREEDING AND MANAGEMENT (7th semester)	-
VETERINARY EPIDEMIOLOGY	Pending completion of the course INTERNAL MEDICINE and OBSTETRICS AND REPRODUCTION I.*	-

*All classes attended, but final exam(s) yet to be taken

X SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
INFECTIOUS DISEASES OF DOMESTIC ANIMALS	Pending completion of the course INFECTIOUS DISEASES OF DOMESTIC ANIMALS in the 9 th semester	INTERNAL MEDICINE must be completed.
STATE VETERINARY MEDICINE	Pending completion of the course INFECTIOUS DISEASES OF DOMESTIC ANIMALS in the 9 th semester	All courses in which students have enrolled must be completed.
FOOD HYGIENE AND TECHNOLOGY	Pending completion of the course FOOD HYGIENE AND TECHNOLOGY in the 9 th semester	All courses in years 1-4 must be completed.
FIELD SERVICE CLINIC	All subjects in 1st to 9th semester must have been attended, and the examinations passed in the following subjects: OBSTETRICS AND REPRODUCTION I and SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II	-

XI SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees		
FORENSIC VETERINARY MEDICINE	Pending completion of the course STATE VETERINARY MEDICINE.*	All courses in which students have enrolled must be completed.		
POULTRY DISEASES	Pending completion of the course INFECTIOUS DISEASES OF DOMESTIC ANIMALS.*	INFECTIOUS DISEASES OF DOMESTIC ANIMALS must be completed.		
HERD HEALTH	All courses from years 1 through 5 must be completed.	-		
VETERINARY ECONOMICS	Pending completion of the course VETERINARY EPIDEMIOLOGY.*	VETERINARY EPIDEMIOLOGY must be completed.		
FIELD SERVICE CLINIC	Positive grade of the course Field Service Clinic must be obtained; pending completion of all clinical courses.	-		

XII SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PROFESSIONAL CLINICAL WORK	Pending completion of all courses.	
PROFESSIONAL FIELD WORK	Pending completion of all courses.	
WRITING A MASTER'S THESIS	Pending completion of all courses.	

REGISTRATION AND EXAMINATION REQUIREMENTS FOR STUDY TRACK RELATED ELECTIVE COURSES AND ELECTIVE COURSES

SUBJECT	Registration requirements	Examination requirements
ADVANCED DIAGNOSTICS AND THERAPY OF THE DISEASES OF THE DIGESTIVE SYSTEM OF DOGS AND CATS	Maximum number of students: 35	
ANATOMY OF LABORATORY ANIMALS	Maximum number of students: 30	
	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed. Pending completion of ANATOMY WITH	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I.,
ARCHAEOZOOLOGY	ORGANOGENESIS OF DOMESTIC ANIMALS III. Priority will be given to students who have passed their pre-qualification exams with a grade od very good or excellent when enrolling into a course.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed.
	Maximum number of students: 20	
AUTOCHTHONOUS DAIRY PRODUCTS	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY
BIOLOGY AND CONSERVATION OF MARINE MAMMALS	Maximum number of students: 30	
CARCASS QUALITY AT THE SLAUGHTER LINE	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY
COMPARATIVE ANATOMY OF SKELETAL SYSTEM	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must
DISEASES OF	Maximum number of students: 20	be completed. BIOLOGY AND PATHOLOGY
HONEYBEES IN CONTEMPORARY PRODUCTION	BIOLOGY AND PATHOLOGY OF BENEFICIAL INSECTS must be completed.	OF BENEFICIAL INSECTS must be completed.
	Maximum number of students: 25	
DISEASES AND TREATMENT OF DOGS AND CATS I	Internal Medicine, Surgery, Orthopaedics and Ophthalmology II, General and Clinical Radiology, Toxicology, Obstetrics and Reproduction I must be completed.	SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY III must be completed.
DISEASES AND TREATMENT OF DOGS AND CATS II	Pending completion of DISEASES AND TREATMENT OF DOGS AND CATS I.	DISEASES AND TREATMENT OF DOGS AND CATS I must be completed.
	OBSTETRICS AND REPRODUCTION II must be completed.	
EMERGING INFECTIOUS DISEASES		INFECTIOUS DISEASES OF DOMESTIC ANIMALS must be completed.
ENGLISH FOR ACADEMIC PURPOSES I	Maximum number of students: 35	

ENGLISH FOR				
ACADEMIC PURPOSES II	Maximum number of students: 35			
FISH MORPHOLOGY	Pending completion of the course BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS.	BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed.		
FISHERY	Maximum number of students: 30 BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed. Maximum number of students: 20	BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed.		
FOOD HYGIENE AND QUALITY CONTROL	All courses in years 1 to 3 must be completed, and all 4th year courses attended	FOOD HYGIENE AND TECHNOLOGY must be completed.		
FUNDAMENTALS OF AGRONOMY	ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE must be completed with a minimal grade of very good (4).			
	Maximum number of students: 3			
HYGIENE AND QUALITY OF FISH MEAT	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY		
HYGIENE AND QUALITY OF POULTRY MEAT	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY		
PARASITIC ZOONOTIC DISEASES	Examination requirements: all courses in years 1 to 2 must be completed; fulfilled criteria for signature in the gradebook and completed progress tests.	PARASITOLOGY AND PARASITIC DISEASES must be completed.		
REPTILE MORPHOLOGY	Maximum number of students: 30 Pending completion of the course ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I, ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II and HISTOLOGY WITH GENERAL EMBRYOLOGY.			
PIGEON KEEPING AND BREEDING	ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE AND HYGIENE AND HOUSING OF ANIMALS must be completed with an average grade which is higher than 3.5 in the above mentioned subjects.			
SELECTED CHAPTERS IN AQUACULTURE	Maximum number of students :3 BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed. Maximum number of students :5 - Study Track - Small Companion Animals	BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed.		
SPECIFIC ANATOMICAL STRUCTURES OF THE LOCOMOTOR APPARATUS OF THE HORSE	Pending completion of the course ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I Maximum number of students: 20			
VETERINARY CLINICAL MICROBIOLOGY	GENERAL MICROBIOLOGY, SPECIAL MICROBIOLOGY and VETERINARY IMMUNOLOGY must be completed with an average grade which is higher than 3.5 in the above mentioned subjects.	GENERAL MICROBIOLOGY, SPECIAL MICROBIOLOGY and VETERINARY IMMUNOLOGY must be completed.		
VETERINARY LEGISLATION AND FOOD SAFETY CONTROL	Maximum number of students: 10 All courses in years 1 to 3 must be completed, and all 4th year courses attended	FOOD HYGIENE AND TECHNOLOGY must be completed.		
VETERINARY CLINICAL PATHOLOGY	INTERNAL MEDICINE must be completed.	INTERNAL MEDICINE must be completed.		
	Maximum number of students: 32			

VETERINARY EMERGENCY AND CRITICAL CARE MEDICINE	Maximum number of students: 35	
VETERINARY PUBLIC HEALTH	All courses from years 1 to 4 must be completed, with attendance of the 5th year courses.	FOOD HYGIENE AND TECHNOLOGY, FOOD HYGIENE AND QUALITY CONTROL, VETERINARY LEGISLATION AND FOOD SAFETY CONTROL must be completed.
VETERINARY LEGISLATION AND FOOD SAFETY CONTROL	All courses from years 1 to 3 must be completed, with attendance of the 4th year courses.	FOOD HYGIENE AND TECHNOLOGY must be completed.
ZOONOSES		INFECTIOUS DISEASES OF DOMESTIC ANIMALS must be completed.

ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I

1. GENERAL INFORM	IATION			
1.1. Course teacher	Prof. Martina Đuras	1.6. Year of the study programme	1 st year, 1 st semester	
1.2. Name of the course	Anatomy with organogenesis of domestic animals I	1.7. Credits (ECTS)	7	
1.3. Associate teachers	Prof. Srebrenka Nejedli; Prof. Tajana Trbojević Vukičević; Assist. Prof. Mirela Pavić; Assist. Denis Leiner, DVM; Assist. Kim Korpes, DVM; Assist. Magdalena Kolenc, DVM; Assist. Nikolina Škvorc, DVM	1.8. Type of instruction (number of hours L + S + E + e- learning)	18 L + 64 E	
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine			
1.5. Status of the course	Compulsory 1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)		VEF-LMS	
2. COURSE DESCRIP	PTION			
2.1. Course objectives	The course presents the gr development of organs and in order to ensure basic kn pathology and clinical cour	d organic systems to vete owledge for other discipl	erinary medicine students	
2.2. Course enrolment requirements and entry competences required for the course	The course is taught to first-year veterinary medicine students during the first semester. Non enrolment requirements or entry competences are required.			
2.3. Learning outcomes at the level of the programme to which the course contributes	Following successful completion of the course, students will be able to apply acquired knowledge on gross anatomy and development of the thoracic and pelvic limbs of domestic mammals during preclinical and clinical courses.			
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Following successful completion of the course, students will be able to: 1. list and describe major anatomical structures of the thoracic and pelvic limbs of domestic mammals 2. explain the development of the thoracic and pelvic limb structures 3. apply anatomical nomenclature 4. skilled communicate anatomical information 5. utilize dissection skills 			

2.5. Course content broken down in detail by weekly class schedule (syllabus)	Lectures: 1. Introduction and anatomical nomenclature (1 hour), 2. General anatomy of the locomotor apparatus and basic angiology (1 hour), 3. General anatomy of the nervous system (1 hour), 4. Basic arthrolology (2 hours), 5. Skeleton and joints of the thoracic limb (2 hours), 6. Development of the muscular tissue (1 hour), 7. Extrinsic musculature of the thoracic limb (1 hour), 8. Intrinsic musculature of the thoracic limb (1 hour), 9. Blood vessels, nerves and lymph nodes of the thoracic limb (1 hour), 10. Skeleton and joints of the pelvic limb (1 hour), 11. Extrinsic and intrinsic musculature of the pelvic limb (2 hours), 12. Blood vessels, nerves and lymph nodes of the pelvic limb (1 hour), 13. Distal digital organ (2 hours) Practicals: 1. Directional terms and planes of the animal body (1 hour), 2. Skeleton of the thoracic limb (10 hours), 3. Regions and fasciae of the thoracic limb (1 hour), 4. Girdle muscles of the thoracic limb (4 hours), 5. Muscles of the shoulder joint (3 hours), 6. Muscles of the elbow joint (2 hours), 7. Axilla (3 hours), 8. Muscles of the radioulnar joints, carpal joint and joints of the digits (3 hours), 9. Blood vessels, nerves and lymph nodes of the thoracic limb (3 hours), 10. Joints of the thoracic limb (3 hours), 11. Skeleton of the pelvic limb (8 hours), 12. Regions and fasciae of the pelvic limb (3 hours), 15. Muscles of the stifle joint (2 hours), 16. Muscles of the tarsal joint and joints of the digits (5 hours), 17. Joints of the pelvic limb (3 hours), 18. Blood vessels, nerves and lymph nodes of the pelvic limb (3 hours), 18. Blood vessels, nerves and lymph nodes of the pelvic limb (3 hours), 18. Blood vessels, nerves and lymph nodes of the pelvic limb (3 hours), 18. Blood vessels, nerves and lymph nodes of the pelvic limb (3 hours), 19. Distal digital organ (2 hours)

ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II

1. GENERAL INFORMATION				
1.1 Course teacher	Prof. Martina Đuras	1.6. Year of the study programme	1 st year, 2 nd semester	
1.2.Name of the course	Anatomy with organogenesis of domestic animals II	1.7. Credits (ECTS)	8	
1.3. Associate teachers	Prof. Tajana Trbojević Vukičević; Assist. Mirela Pavić, PhD, DVM; Assist. Denis Leiner, DVM, Assist. Kim Korpes, DVM	1.8. Type of instruction (number of hours $L + S + E + e$ - learning)	20 + 100 E	
1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course		
1.5.Status of the course	Compulsory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	VEF-LMS	
2. COURSE DESC	-			
2.1.Course objectives	The course presents the gross anatomy of domestic animals with embryonic development of organs and organic systems to veterinary medicine students in order to ensure basic knowledge for other disciplines such as physiology, pathology and clinical courses.			
2.2.Course enrolment requirements and entry competences required for the course				
2.3.Learning outcomes at the level of the programme to which the course contributes	Following successful completion of the course, students will be able to apply acquired knowledge on gross anatomy and development of the trunk including the viscera during preclinical and clinical courses.			
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Following successful completion of the course, students will be able to: list and describe major anatomical structures of the trunk including the viscera of domestic mammals explain the development of the viscera apply anatomical nomenclature skilled communicate anatomical information utilize dissection skills			
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Lectures: 1. Skeleton of the trunk: structure and development (1 hour), 2. Body cavities and their serous lining (2 hours), 3. Heart: structure and development (3 hours), 4. Lungs: structure and development (1 hour), 5. Digestive system: structure and development (4 hours), 6. Urinary and genital organs: structure and development (4 hours), 7. Mammary gland: structure and development (2 hours), 9. Blood vessels, nerves and lymphatic nodes of the trunk and viscera (3 hours) Practicals:			

	1. Skeleton of the trunk (thoracic, lumbar and caudal vertebrae, ribs, sternum) (5 hours), 2. Regions of the trunk (2 hours), 3. Mammary gland (4 hours), 4. Respiratory muscles (except diaphragm) (4 hours), 5. Thoracic and pectoral cavities, pleurae and pleural cavities (3 hours), 6. Trachea and lungs (5 hours), 7. Thymus, oesophagus, phrenic nerve, vagal nerve, sympathetic trunk (7 hours), 8. Pericardium and the heart (10 hours), 9. Blood vessels in the pectoral cavity (6 hours), 10. Transversus thoracis muscle, longus colli muscle, diaphragm (5 hours), 11. Abdominal wall, inguinal canal, external male genital organs (10 hours), 12. Peritoneum (3 hours), 13. Intestine (6 hours), 14. Stomach (5 hours), 15. Liver and pancreas (4 hours), 16. Spleen, abdominal aorta, caudal vena cava, portal vein, nervous system of the abdominal cavity (5 hours), 17. Urinary system and adrenal gland (4 hours), 18. Female genital organs (4 hours), 19. Pelvic cavity, accessory genital glands, rectum, internal iliac artery (4 hours), 20. Muscles of the back (4 hours).

	Student obligations are defined with the Regulations on the integrated				
	undergraduate and graduate study of veterinary medicine. From total 100 points,				
	student must acquire a minimum number of points from all elements of assessment				
	in order to pass the subject. The final grade is based on the sum of points (scores).				
	The scoring of individual elements of assessment:				
	Attending lectures and e – learning; a total of 6 points (the lowest number of points				
	that a student should gain from this element is 3 points). Attending seminars; a total				
	of 6 points (the lowest number of points that a student should gain from this element				
	is 4 points). attending exercises (intramural and extramural-farms as a field				
2.8.Student	course); a total of 6 points (the lowest number of points that a student should gain				
responsibilities	from this element is 4 points). Active participation in seminars and exercises				
	(solving exercises in LMS and self-check during the exercises and interpretation of				
	tasks); a total of 10 points (the lowest number of points that student should gain from this element is 5 points). Continuous knowledge shocking (colleguis); a total				
	from this element is 5 points). Continuous knowledge checking (colloquia); a total				
	of 32 points (the lowest number of points that a student should gain from this element is 20 points); during the course 3 colleguia will be organised, the first (1 st)				
	element is 20 points); during the course 3 colloquia will be organised - the first (1 st)				
	has a total of 12 points and a student should gain at least 58% (7 points), while the				
	other two the 2^{nd} and the 3^{rd} have 10 points each and a student should gain at least 5^{50} (6.5 points) ad each colleguium. Final even, written form on LMS platform of				
	65% (6.5 points) od each colloquium. Final exam -written form on LMS platform; a total of 40 points (the lowest number of points that student should gain from this				
	element is 24 points).

At nd of teaching the knowledge of students and independence in work will erified by a final examination.

BASIC STATISTICS IN VETERINARY MEDICINE

1. GENERAL INF	ORMATION			
1.1. Course	Assoc. Professor Sven	1.6. Year of the study	1st	
teacher	Menčik, DVM, PhD,	programme	-	
1.2. Name of the	Basic statistics in	<u> </u>	2,5	
course	veterinary medicine	1.7. Credits (ECTS)	2,0	
1.3. Associate teachers	Full Professor Velimir Sušić, DVM, PhD Full Professor Anamaria Ekert Kabalin, DVM, PhD, Assistant Professor Maja Maurić, DVM, Ivan Vlahek, DVM Aneta Piplica, DVM	1.8. Type of instruction (number of hours L + S + E + e-learning)	8 (L) + 0 (S) + 16 (E) + 6 (e-learning)	
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course	-	
1.5. Status of the course	Compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	20%	
2. COUSE DESCR	RIPTION			
2.1. Course objectives	Adoption of facts about the significance of statistics for veterinary profession, getting theoretical and practical skills necessary for optimal planning and performing statistical observation, as well as data analysis and concluding about principles of events in veterinary medicine. Students will learn about different software system with the aim of achieving new skills related to different program environments during the statistical analysis			
2.2. Course enrolment requirements and entry competences required for the course	-			
2.3. Learning outcomes at the level of the programme to which the course contributes	Acquiring knowledge about the collection, processing and presentation of statistical data sets and their analysis and interpretation. Hypothesis, their evaluation and testing in veterinary medicine. Criteria for the selection of individual tests. Interdependence of characteristics and the possibility of their application in veterinary medicine.			
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successful completion of the course the student will be able to: - identify the types of variables, - interpret the results of basic statistical data processing and analysis, - determine the normality of variables, - select the test to verify the hypothesis, - determine the correlation between two or more variables - familiarize with programming environments for statistical analysis Methodological unit / course content			
2.5. Course content broken down in detail by weekly class schedule (syllabus)	biomedical and animal scien and data analysis. Data en	opment, application in veterina ce, use of computers in statist try and processing in Statisti ., TIBCO, 2017). Variables – t	ics ica

		(max. 20%)			
2. COUSE DESCRIPT					
2.1.Course objectives	Objective of studying biochemistry is exploring the structure and function of the body. Modern biochemistry is in constant interaction with medicine, so the acquisition of knowledge about the biochemical and energetic changes and the regulation of metabolic processes in the body of healthy animals provides a biochemical basis for understanding the physiological processes, as well as the basis for understanding the consequences of disorders of metabolic pathways. Management of certain metabolic processes or change their courses according to our needs and goals is possible only with a good knowledge of biochemical pathways. During practical work in the lab, students will learn about the principles of individual techniques used in the laboratory.				
2.2.Course enrolment requirements and entry competences required for the course	attendance in Medical Chemistry				
2.3.Learning	general understanding of	the biochemical principle	s, the major metabolic		
outcomes at the level of the programme to which the course contributes	pathways, as well as their regulation				
	After successfully passing	g the course student will b	be able to:		
	- to define the structure o	f most proteins, carbobyd	rates and fats in the		
	- to define the structure of most proteins, carbohydrates and fats in the body, and the importance of certain types of chemical bonds in				
2.4.Learning outcomes expected	metabolic processes				
at the level of the	- to explain the correlation of structure and main function of most proteins,				
course (4 to 10	carbohydrates and fats				
learning outcomes)	 to show the sequence of biochemical changes in the major metabolic pathways, explain the effect of the major enzyme systems in catalysis of certain reactions 				
- to analyse the ways of regulation of biological activity					

	 to apply a simple biochemical methods for measuring analytes in biological samples to understand the connection of metabolic pathways and accept the theoretical basis for the selection and evaluation to the results of varuous laboratory measurements to understand changing of metabolic pathways using various treatment procedures 					
2.5.Course content broken down in detail by weekly class schedule (syllabus)	proceduresLectures: 1 Aminoacids, 2. Protein structure, 3 Enzymes, 4. Hemoglobin,5. Collagen, Basics of cell signaling, 6. 2. COUSE DESCR	IPTION					
2.1. Course objectives	2.1. Course Students will be able to distinguish basic systematic categories of plants important and animals within the whole ecosystem. They will get acquainted with morphologic basis of fodder plants from plough-fields and grasslands. They will be					
2.2. Course enrolment requirements and entry competences required for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	The course contributes to higher competences in the field of animal breeding. Assisted reproductive technologies like Artificial insemination, Superovulation, In vitro Fertilization, Embryo Transfer have been introduced to overcome reproductive problems, to increase the offspring from selected female's and to reduce the generation intervals in farm animals. This advanced reproductive technologies provides a powerful tool for rapid change in animal population, genetically. As this technologies will play an important role in future perspective for efficient reproductive performance in livestock, this course presents an important part in education of new generation of students.					

BOTANY IN VETERINARY MEDICINE

	The expected outcomes are: After successful completion of the course the student will be able to: 1. Compare the structure of prokaryotic and eukaryotic cells and enumerate groups of prokaryotes and explain their significance for animal health as well as the role and application of bacteria in the biosphere and life of humans and animals 2. Distinguish basic systematic categories of plants important for veterinary							
2.4. Learning	medicine 3. Differentiate	nedicine . Differentiate morphology group of plants important in animal nutrition and lentify groups of medicinal and honey plants and groups of plants poisonous to

ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE

1. GENERAL INFORMATION						
1.1. Course	Gordana Gregurić Gračner,	1.6. Year of the study				
teacher	DVM, PhD, Associate Professor	programme	1 th			
1.2. Name of the course	Environment, animal behaviour and welfare	1.7. Credits (ECTS)	3			
1.3. Associate teachers	Kristina Matković, DVM, PhD, Full Professor; Mario Ostović, DVM, PhD, Assistant Professor; Ivana Sabolek, DVM, Assistant	1.8. Type of instruction (number of hours L + S + E + e-learning)	L8+ S8+E24			
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course				
1.5. Status of the course	Compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCR	IPTION					
2.1. Course objectives	which students will acquire due knowledge on the concept of animal behaviour and welfare, to ensure such conditions in practice in which the animal will express the behaviour characteristic of its species while feeling well itself. In addition, knowledge about the impact of ground and water on animal health condition, production and reproduction as well as about the influence of animals upon these environmental factors will be acquired in order to preserve proper bio ecologic relationships in the environment. This approach in presentation of particular topics meets the conditions necessary for full understanding and acquisition of knowledge in other courses in preventive veterinary medicine, primarily in the course "Hygiene and Housing of animals", included in further studies in semesters					
 2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to 	Linderstanding the concept of animal behaviour and welfare					
which the course contributes	reproduction as well as to preserve proper bio ecologic relationships in the environment After successful completion of the course the student will be able to:					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	-explain the effect of soil and animals, but also explain the preserve the biological and e -interpreting results of soil an -organize grazing systems fo depending of their species, n -identify physiological and ab -self-judge the benefit of (farr	animal impact on the envi cological relationships in it d water examinations r animals on the basis of c umber and health normal behaviour in dome	ronment in order to t climate-specificity, estic animals			

2.5. 2. COUSE DESCRIPTIO	N							
2.10.Course objectives	Histology is one of the basic subjects of the medical sciences; it studies the structure of human and animal bodies, which can be seen only with the help of optic aids. Etymologically, histology is a science that studies the tissues of a body. However, it explores the complete microscopic and submicroscopic system of the organism. During the study, students of veterinary medicine improve their knowledge from macroscopic anatomy and at the same time, they gain insight into the correlation between the structure and function of organs and organic systems. Knowledge of the normal structures is essential for the recognition of changes in the structure of the tissue, organs and organic systems. Embryology deals with the embryonic development and enables the understanding of complex interrelations in the body of an animal. It is also of practical importance since it explains the emergence of anomalies during							
2.11.Course enrolment requirements and entry competences required for the course	-							
2.12.Learning outcomes at the level of the programme to which the course contributes	This course builds on the knowledge acquired in the anatomy courses. Students will be able to identify, describe, connect, analyze, explain and integrate the macroscopic and microscopic structure of individual organs and systems. It is also the basis for understanding and linking the physiology, pathophysiology and pathology. Students will be able to explain the characteristics of individual cells and tissues that will give a further understanding of physiological, pathophysiological and pathological processes, which is a prerequisite for understanding the pathomorphological changes in the pathogenesis of diseases.							
2.13.Learning outcomes expected at the level of the course	By the end of this course th -recognize and define the b tissues and organs of anima	asic elements of the r						

HISTOLOGY WITH GENERAL EMBRYOLOGY

(4 to 10 learning outcomes)-explain and compare the structure of certain organs in different anir species; -propose the necessary histological method of processing the sample -independently cut off a piece of tissue and fix it correctly for the selechistological method; -use the microscope efficiently for the purpose of analysis and study histological slides; -recognize and analyze the histological slides of various organs and tissues; -examine the relations between the structures and development of domestic animals	e; ected of

that the total number of ECTS	Tests	2,24	Oral 2,80		(other)				
credits is equal to the ECTS value of the course)	Written exam		Project		(other)				
2.10. Grading and evaluating student work in class and at the final exam	Attending lectures (3-6 points) During the "Histology and general embryology" course, students must attend 15 out of 30 hours of lectures in order to gain the 3 minimal points. The maximum number of points from this evaluation element is 6. Checking of attendance at lectures will be done by collection of students' signatures. One hour of a lecture (45 minutes) is equal to 0.2 points. Attending exercises (8-12 points) During the "Histology and general embryology" course students must attend 40 out of 60 hours of exercises in order to gain the 8 minimal points. The maximum number of points from this evaluation element is 12. The checking of attendance at exercises will be done by calling out the students at the beginning of each practical. One hour of practical (45 minutes) is equal to 0.2 points Participation at exercise (5-10 points) Participation is expected of students by asking questions, drawing microscopic slides and by active studying from the given literature. The active participation of each student at the exercises will be evaluated by 1-10 points. A student must gain a minimum of 5 points. The maximum number of points from this evaluation element is 10. Continuous knowledge checking (preliminary exams: first 10-16 points; second 10-16 points) Two preliminary exams will be organized during the course. Both are worth minimum 10 and maximum 16 points. To take the oral exam students must have minimal 10 points from each. In case she/he does not earn enough								

	Final, oral exam (24-40 points)							
	The final exam is oral and it consists of revision and knowledge of histological slides (according to the course goals and outcomes). For each slides (there are 5 of them) a student can gain 8 points max. To pass the exam students must gain at least 24 points. The maximum number of points is 40.							
	The final grade is formed on the basis of the total sum of all five evaluation elements in the course of which the student must gain the minimal number of points from each element. The final mark is expressed quantitatively, by a numeric point-system value and by a grade, adequate to its value in points, from 1 to 5. Students are marked by grade 1 in case they did not master the curriculum successfully, in other words grade 1 means insufficient.							
	In order to take the final, oral exam a student must attend at least 15 lectures lessons (3 points) and at least 40 practical (8 points), show minimal efforts (5 points) and gain the minimal 20 points from the preliminary exams. On that basis the student can gain a total of 36 points. At the final exam the student must have knowledge by which she/he gains 24 points. In the end the minimal number of points gained is $36 + 24 = 60$.							
	Points	Gra	ade					
	do 59	1 (F						
	60-68	2 (E	•					
	69-76	2 ([
	77-84	3 (0	2)					
	85-92 4 (B)							
	93-100	5 (A	۹)					
	In case a student gains the maximum number of points by attending lectures (6), attending exercises (12) and for participation (10), also adding the number of points she/he gained at the preliminary exam (32), the student gains the maximum of 60 points. Showing knowledge and describing five histological slides the student can earn 40 points more, which makes 100 points in the end and is awarded with an excellent grade (5).

course		3), percentage of					
		online instruction					
		(max. 20%)					
2. COUSE DESCRI			· · · ·				
2.1. Course objectives	is to introduce students to the spec veterinary medicine and to develop register. The course is designed to introduc in veterinary medical English in ord and ability to use a wide range of t reading scientific and professional	The course is designed to introduce the students to principles of word formation in veterinary medical English in order to develop participants' understanding, and ability to use a wide range of technical terms. Besides providing training in reading scientific and professional literature the course also aims to enable students to achieve general progress in verbal understanding and Information					
2.2. Course enrolment requirements and entry competences required for the course							
2.3. Learning outcomes at the level of the programme to which the course contributes	By studying the principles of word gaining understanding of terms us students develop competence to i in scientific and technical literature language register of veterinary me develop students oral and written	eed in various fields o dentify, acquire and u e from the field. Beside edical English, the co	f veterinary medicine use information provided des focusing on specific ourse also aims to				
	Having successfully complete	d the course student	will/will be able to:				
	 recognise veterinary 	medicine language re	egistar				
2.4. Learning outcomes			-				
expected at the	 understand principles 						
level of the course	 recognise technical te 	erms from various field	ds of veterinary				
(4 to 10 learning	medicine						
outcomes)		.,	· ·				
	 independently use a compared 	onsiderable number o	r scientific terms in a				
	given context						

	reach basic understanding of the structure of technical and scientific text								
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Introduction to veterinary terminology. English as a means of global communication. Different language registers. General English/professional English (English for Specific Purposes - ESP). Basic features of English in veterinary medicine (specific terminology, specific grammatical structures). Analysis of terms pertaining to veterinary profession: Branches of veterinary medicine; Veterinary education worldwide; Career opportunities (veterinary practice, public health, industries). Dictionaries and vocabulary building: Types of dictionaries; Dictionary skills; Key words. Collocations and idioms. Word formation in specialised veterinary medical terminology: Word elements. Prefixation and suffixation. Compound words. Analysis of the specialized terminology in technical texts. Basic features of scientific text. Topic: Characteristics of living beings. Analysis of the specialized terminology in technical texts. Topic: Organisation of living beings: Cells. Analysis of specialized terminology in technical texts. Topic: Tissues; Organs; Organs systems; Organism.

1.3. Associate teachers	Full professor Ksenija Vlahović, DVM Full professor Maja Popović, DVM, PhD Associate professor Tomislav Gomerčić, DVM, PhD Assoc. Prof Daniel Špoljarić, DVM, PhD	1.8. Type of instruction (number of hours L + S + E + e-learning)	L=15; S=20; E=40					
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate studies	1.9.Expected enrolment in the course	30					
1.5. Status of the course	Compulsory	2 i.e. 10%						
2. COUSE DESCRI	PTION							
2.1. Course objectives	Through the course, students do acquire crucial knowledge and understanding about animal kingdom, which is per se the essence of the study of veterinary medicine. The goal of teaching this course is to acquaint the students of Veterinary medicine with the basic rules of functioning of living world and its relation to the nonliving environment. It enables understanding of the wide range of processes from the transport of matter and energy from the level of cell and organism to the populations of all taxonomic groups of fauna and flora, and their relations on the level of ecosystem and entire biosphere. This is the precondition for any logical understanding of other courses from morphology and physiology to pathology, therapy and prevention of diseases. Additional needs for this knowledge emerge from the ever broadening of spectrum of species treated in the veterinary medicine, an either as patients, husbandry, hunting, collection, or human consumption in any form. Regulations on environmental matters (like various waste disposal) and on international trade							
2.2. Course enrolment requirements and entry competences required for the course	with living organisms are also getting more complex and strict. The subject Zoology is at the beginning of the Veterinary medicine study and the only precondition is that a student can understand, speak and write in English.							
2.3. Learning outcomes at the level of the programme to which the course contributes	 taxonomically classifying every animal to the phylum level, while classifying mammals to the order level interpret basics of evolutionary processes explain the structure and role of cell parts during cell division distinguish types of reproduction, ways and processes of fertilization 							
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 compare stages of embryonic groups of vertebrates knowing abiotic and biotic eco interactions distinguish biomes and phase 	logical factors and mech	nanisms of their					

ecosystems Definitions (systematics, taxonomy, classification), Systematic categories ar binary nomenclature (Linne), Phylogeny and evolution (Darwinism); Phylogenet tree (6 Kingdoms of living organisms: Prokaryotes, Archea, Protista, Animali Plantae, Fungi); Eukaryotes, Cell biology: Features of eukaryote cell. Compariso with prokaryotic cell. Nucleus and nucleus membrane importance. Cell organelle evolution, structure and function: cell membrane, nucleus, endoplasmic reticulur mitochondrion, lysosomes, microtubule, ribosomes, nucleolus, centrosom Animal and plant cell distinctions. Chromosomes: structure and cycle. Protozo Sarcodina, Mastigophora, Ciliata, Eusporozoae, Cnidosporidia. Evolution metazoa: Multicellular animals' appearance and development. Parazoa (Porifer Placozoa). Cell organelles and whole cells specialization. Acelomata: Cnidari			llutants and basic mechanisms of	their interactions in
 Characteristics and division. Mammalia: Orders: Insectivora, Dermotopter Chiroptera, Edentata, Pholidota, Primates, Rodentia, Lagomorphea, Cetace Carnivora, Tubuliedentata, Hyracoidea, Proboscidea, Sirenia, Perissodactyl Artiodactyla. Cell divisions: Cell divisions types – somatic cells division - mitod division – reductive division: meiosis I and II, (Crossing-over, oogenesis spermatogenesis, spermiogenesis) – endomitotic division. Chromosome cycle u mitosis and meiosis. Polykariontia, polyploidy, polyteny – gigant chromosomes. Description and role of each cell division type. Phases analysis Division result. Sex cells: Gametes or sex cells (evolution of sex cells Spermatozoa and egg (structure and function). Eggs classification by quantity ar location of yolk content at all animals by groups). Reproduction, types ar purpose. Nonsexual and sexual reproduction (hermaphrodite, diecic animals Advantages of sexual reproduction. Parthenogenesis, androgenises. Fertilization duration), Phases fertilization: singamy, cariogamy, activation of egg. Each qu three questions for The final student's	Written exam 2.2 Project (other) According to Bologna approach of study process, the work of an student will be evaluated by the following means: For attending a total of 16 lecture hours a student can gain 3 to 6 points, thereby each lesson is worth 0.4 point. For attending a total of 20 seminar hours a student can gain 4 to 6 points, thereby each lesson is worth 0.3 point. A condition is to write one seminar work. For attending a total of 40 exercise hours a student can gain 4 to 6 points, thereby each lesson is worth 0.15 point. A student can be asked or she/he can answer on her/his own at least 6 times. Each correct answer is worth 1.67 points. The student can gain 5 to 10 points. There will be twelve short tests each containing 10 questions, at the beginning of lab exercises. In case a student does not attend the lesson and does not gain 120 units (e.g. she/he gained only 100 or 110 units), the unit value will be recalculated from the number he gained. A student can gain 20 to 32 points, and the unit value for each correct answer is 0.27 (for all 12 tests). The final written exam consist of 50 questions, where a student can gain 15 to 20 points. Each question is worth 0.5 accounting units. The oral exam contains three questions for 9 to 15 points. Each question is worth 5 accounting units. The final student's score is calculated according to the following: Points Grade up to 59 1 (F) 60-68 2 (E) 69-76 69-76 2 (D) 77-84 3 (C)

ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III

1. GENERAL INFORMATION						
1.1. Course teacher	Prof. Martina	1.6.Year of the study	2 nd year, 3 rd semester			
1.2.Name of the course	Duras Anatomy with organogenesis of domestic animals III	1.7.Credits (ECTS)	5.5			
1.3.Associate teachers	Prof. Srebrenka Nejedli; Prof. Tajana Trbojević Vukičević; Assist. Prof. Mirela Pavić; Assist. Denis Leiner, DVM; Assist. Kim Korpes, DVM; Assist. Magdalena Kolenc, DVM; Assist. Nikolina Škvorc, DVM	1.8.Type of instruction (number of hours L + S + E + e-learning)	15 + 63 E			
1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9.Expected enrolment in the course				
1.5.Status of the course	Compulsory	1.10.Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	VEF-LMS			
2. COURSE DESCRIPTI	ON					
2.1.Course objectives	embryonic developm medicine students in	the gross anatomy of dome nent of organs and organic s order to ensure basic know physiology, pathology and cli	systems to veterinary /ledge for other			
2.2.Course enrolment requirements and entry competences required for the course	-	"Anatomy with organogenes organogenesis of domestic a				
2.3.Learning outcomes at the level of the programme to which the course contributes	Following successful completion of the course, students will be able to apply acquired knowledge on gross anatomy and development of the head and neck of domestic mammals and basic gross anatomy of domestic birds during preclinical and clinical courses.					
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Following successful completion of the course, students will be able to: 30 list and describe major anatomical structures of the head and neck of domestic mammals and basic gross anatomy of domestic birds 31 explain the development of the structures of the head and neck 32 apply anatomical nomenclature 33 skilled communicate anatomical information 34 utilize dissection skills 					

	Lectures:							
2.5.Course content broken down in detail by weekly class schedule (syllabus)	 Principles of the skeleton of the head and cervical spine (1 hour), 2. Muscles of the head and neck (2 hours), 3. Mouth, salivary glands, pharynx and the esophagus: structure and development (3 hours), 4. Upper respiratory tract, larynx and trachea: structure and development (2 hours), 5. Development of the nervous system (1 hour), 6. Brain, spinal cord and cranial nerves (2 hours), 7. Eye: structure and development (1 hour), 8. Ear: structure and development (1 hour), 9. Basic gross anatomy of domestic birds (2 hours) Practicals: Cervical vertebrae (2 hours), 2. Skeleton of the head (8 hours), 3. Regions, fasciae and skin muscles of the head and neck (3 hours), 4. Muscles of the head (4 hours), 5. Muscles of the neck and nuchal ligament (6 hours), 6. Ventral neck region and parotid region (3 hours), 7. Buccal region (3 hours), 8. Masseteric region and temporomandibular joint (3 hours), 9. Mouth (3 hours), 10. Pharynx (3 hours), 11. A. carotis externa (2 hours), 12. Intermandibular region (3 hours), 13. External nose and nasal cavity (3 hours), 14. Larynx (3 hours), 15. Eye (4 hours), 16. Vestibulocochlear organ (3 hours), 17. Brain (3 h), 18. Basic gross anatomy of domestic birds (4 hours).

1. GENERAL INFORMATION Anamaria Ekert 2nd 1.1. Course 1.6.Year of the study Kabalin, PhD, Full teacher programme Professor 7 1.2.Name of the Animal Breeding 1.7.Credits (ECTS) course and Production 34 L + 14 S (4 e-Velimir Sušić, PhD, Full Professor learning) + 42 E (permanent) Sven Menčik. PhD. 1.8.Type of instruction 1.3.Associate Assoc. Professor (number of hours L + S + teachers Maja Maurić, PhD, E) Assistant Professor Ivan Vlahek, VMD Aneta Piplica, VMD 1.4.Study Integrated 20 programme undergraduate and 1.9.Expected enrolment in (undergraduate, graduate study of the course graduate, veterinary medicine integrated) 1.10.Level of application of 4.4% 1.5.Status of e-learning (level 1, 2, 3), Compulsory the course percentage of online instruction (max. 20%) 2. COUSE DESCRIPTION The objective of the course Animal breeding and production is to teach students of veterinary medicine how to evaluate and improve genetic basis of 2.1.Course animals. Special attention is focused on genotype-phenotype characteristics which have influence on quality and quantity of animal products, than to the objectives characteristics of animal resistance to diseases and animal organism environment interactions. 2.2.Course enrolment Undergraduate courses: Basic Statistics in Veterinary Medicine and Animals requirements **Breeds Characteristics** and entry competences required for the course Material is divided into three parts that first allow student to acquire knowledge about animal species as a result of its genetic particularities and specific 2.3.Learning environment. Then there are lessons that explain how to estimate genetic basis outcomes at the of particular traits and describe breeding methods that enable us to improve level of the programme to this traits. Finally, in the third part students learn about different production which the systems and the way of using animal genetics to improve quantity and quality course of production and in the same time how production influence on animal health. contributes After successfully completion of the course students will be able to: 2.4.Learning - understand the role of genetic basis in different ways of breeding and outcomes exploiting animals expected at the - apply different methods to improve the genetic basis of animals with respect level of the course (4 to 10 to specific breeding traits learning - identify various animal production systems outcomes) - gather animal health and production data

ANIMAL BREEDING AND PRODUCTION

	- analyse animal health and production data	
	- setting the goals in cooperation with farmer	
	- control advancement according to set goals	
	Methodological unit / course content	Class schedule ("L" lectures + "S" seminars + "E" exercises intramural + "Ef" exercises field)
	Animal breeding - introduction, definition and importance. Animal breeding traits - measurability and economic value. General and special animal breeding traits. Inheritance and variability of animal breeding traits. Phenotype equation. Phenotype/genotype of qualitative and quantitative traits. Phenotypic variability of breeding traits. Genotype determination of qualitative and quantitative breeding traits. Introduction to the various uses of animals - production, work, experiments, pets, sports, recreation. Importance and basic principles of animal production. General and special traits in breeding of cattle, sheep, goats, pigs, poultry, horses and dogs.	L 3 + E 4
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Introduction to genetic improvement of animals by different breeding methods. Breeding population - genetic and genotype structure. Animal improvement by new gene combinations and/or gene frequency change. Methods of animal breeding – pureblood, crossbreeding, bastarding. Biotechnological methods in animal improvement – artificial insemination, multiple ovulation and embryo transfer, cloning, semen sexing, gene tests. Improvements of animal populations - breeding programs, exhibitions, licensing, regionalization, implementation of legal regulations, scientific and professional literature.	L 4 + E 4
	Introduction to genetic improvement of animals by selection. Selection of animals with regard to qualitative traits. Natural and artificial selection of animals. Methods of selection. The frequency of genotypes and genes in the animal populations. The equilibrium of genotypes and genes in the population. Factors that can change the frequency of genotypes and genes in the population. Harmful genes - degeneration, predisposition to diseases. Major genes – muscular hypertrophy, fertility.	L 4 + E 2
	Selection of animals with regard to quantitative traits. Causes of variability of quantitative traits. Statistical indicators in the estimation of quantitative traits variability. Relationship and repeatability of quantitative traits. Quantitative traits and	L 4 + E 4

1	
environmental impact. Heritability. Setting the selection criteria. Selection Differential. Assessment of the effect of selection. Factors that influence effect of selection: herd renewal, generation interval, crossing effects.	
Introduction to evaluation of the breeding value - definition, presentation and interpretation of the breeding value. Differences between genotype and breeding value. Sources of data and the accuracy of the estimation of the breeding value. Methods for estimation of breeding values. Breeding value in different animal species.	L 4 + E 4
Production systems in cattle breeding. Technological basics in the production of cow's milk. Technological basics in the production of beef meat. Herd health and production management in cattle farms.	L 3 + S 2 +E 2 + E(f) 8
Production systems in sheep and goat farming. Technological basics in the production of sheep and goat milk. Technological basics in the production of sheep and goats meat. Herd health and production management in sheep and goat farms.	L3+ S2+E1
Production systems in pig breeding. Technological basics in the production of pork. Herd health and production management in pig farms.	L2+ S2 +E1
Production systems in poultry. Technological basics in the production of chicken meat. Technological basics in the production of chicken eggs for food. Production of other poultry species. Herd health and production management in poultry farms.	L 2+ S 2 + E 2 + E(f) 3
Training and use of horses. Organization of horse mating, parturition, foal and hare raising. Different use of horses.	L 2 + E 2 + E(f) 1
Training and exploitation of dogs. Reproduction, training of young dogs. Different use of dogs. The basics of dogs training. Training of official and therapeutic dogs. Good breeding practice in dogs. Raising cats. Reproduction, breeding and raising young cats. Good breeding practice in cats.	L 2 + E 3
Breeding and exploitation of laboratory animals and rabbits. Mating and raising of laboratory mice and rats.	L 1 + E 1

	Basics of bree common cage

1. GENERAL INFORMATION 1.1. Course Associate Professor Hrvoje 1.6. Year of the study 2nd vear teacher Valpotić programme 1.2. Name of the Basic animal nutrition 3.5 1.7. Credits (ECTS) course Full professor Željko 1.8. Type of instruction 15 L + 30 E 1.3. Associate Mikulec, Assistant Professor (number of hours L + S + teachers Diana Brozić E + e-learning) 1.4. Study Integrated undergraduate programme and graduate study of 1.9. Expected enrolment in (undergraduate, veterinary medicine the course graduate, integrated) Compulsatory 1.10. Level of application of 1.5. Status of the e-learning (level 1, 2, 3), course percentage of online instruction (max. 20%) 2. COUSE DESCRIPTION After successfully passing the exam of course "Basic Animal Nutrition" students will gain basic knowledge in the area of animal nutrition necessary for better understanding the course "Applied Animal Nutrition" which starts the following semester. This means that students are familiar with chemical components of feed. 2.1. Course nutritive values of different groups of feedstuffs, and are able to apply this objectives knowledge. In addition, students will be trained for autonomous organoleptic testing of feedstuffs propriety, their sampling, taking part in different methods of feed analysis and interpretation of the results. 2.2 Course Completed final exam in Medicinal Chemistry. enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to which the course contributes 2.4. Learning Understand basic concepts about nutrients outcomes Have an insight into analytical methods and basic chemical analysis of feed expected at the Estimate the nutritional value of feeds level of the course Understand the variations between feed mixtures and pet food (4 to 10 learning Have knowledge about substances that can contaminate feed outcomes) 1. Goals of nutrition and its role in veterinary medicine. (Development of nutrition and current status in science. Interaction: soil, plant, animal. Feed production.); 2. Chemical analysis of feed (Sampling for analysis. Analytical methods. Basic feed composition. Interpretation of feed analysis.); 3. Water and dry matter (Water in 2.5. Course feeds. Feed water content. Methods for determining moisture.); 4. Protein and content broken amino acid content of feed (Nitrogenous feeds. Biological value of protein. Ideal down in detail by weekly class protein. Digestible protein and amino acids. Crude protein. Methods for schedule (syllabus) determining crude protein in feedstuffs. Protein in ruminant nutrition.); 5. Carbohydrates in feedstuffs. Methods for determining carbohydrates in feedstuffs. Carbohydrate digestion and the influence on nutrition. Carbohydrate fermentation.); 6. Lipids in feedstuffs (Crude fat and methods for determining crude

BASIC ANIMAL NUTRITION

	fat in feedstuffs. Compound lipids. Fatty acids in feedstuffs.); 7. Minerals in feedstuffs (Micro-mineral and macro-mineral elements. Conversion of mineral elements); 8. Vitamins in feedstuffs (Vitamin addition to feeds); 9. Energy metabolism (Energy in feed. Energy fractions in animal system. Importance of energy content in feed formulation.); 10. Feed additives (Classification. Advantages and adverse effects of additive use); 11. Nutrition in different stages of development and production (Maintenance. Growth. Fattening. Work. Reproduction. Gestation. Lactation. Egg production. Wool and mohair production.); 12. Nutritive value of feedstuffs (Dry forages and roughages. Concentrates.); 13. Feed mixtures and pet food (Complete feed mixtures. Premixes. Pet food. Labeling of feed mixtures and pet foods. Legislation concerning feed production.) 14. Factors affecting feed consumption (Taste. Appearance. Hunger. Appetite. Physical form. Mechanisms of feed intake. Inhibition of feed intake. Expected feed intake. Modulation of feed intake.).

2. COUSE DESCRI	PTION	-			
2.1. Course objectives	The course will enable the students acquire skills and knowledge qualifying them to ensure appropriate animal housing to prevent the occurrence of unfavourable conditions of housing environment that may compromise animal health, productivity and reproduction. In addition, students will acquire due knowledge about the methods of animal waste disposal to prevent environmental contamination, and on the role of veterinarian in animal care and transportation to prevent stress situations and health disturbance due to inappropriate transfer from one setting to another one, or because of poor animal hygiene. Sanitation plays a crucial role in preventive veterinary medicine; therefore the course will provide students with due knowledge and skills in the methods, types and effects of disinfection in preserving animal health as well as in the control of pest insects and rodents in the environment to prevent the spread of disease to humans and animals. The objective of the course is to develop competences qualifying students for preservation of biological balance between the environment and the animal while exhibiting appropriate health state through optimal productivity and

INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY II

1. GENERAL INFO	RMATION					
1.1. Course	Dubravka Vilke-Pinter,	1.6. Year of the study	2			
teacher	Ph.D.	programme	_			
1.2. Name of the course	Introduction to English Veterinary Medical Terminology II	1.7. Credits (ECTS)	1			
1.3. Associate teachers		1.8. Type of instruction (number of hours L + S + E + e-learning)	10 hours S + 5 hours E (of which 2 hours e- learning)			
1.4. Study programme (undergraduate, graduate, integrated)	undergraduate	1.9. Expected enrolment in the course	25			
1.5. Status of the course	obligatory	 1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%) 				
2. COUSE DESCRI	PTION					
2.1. Course objectives	The aim of this course is to expand students' knowledge of the specifics of the language register pertaining to the field of veterinary medicine, primarily of technical terminology that is widely present in the professional literature from the field. The course also aims to develop students' understanding of structural patterns and linguistic means used to achieve textual cohesion in scientific literature. Besides providing training in reading scientific and professional literature the course also aims to develop general written and oral language skills.					
2.2. Course enrolment requirements and entry competences required for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	The course aims to develop students' skills to use technical vocabulary specific to the field of veterinary medicine as well academic reading skills in order to enhance students abilities to use relevant literature during their academic studies, and beyond, in the course of their future professional careers. The course also focuses on developing students' overall written and oral competence in English to enable them to communicate efficiently in a professional setting.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Having successfully completed the course student will/wil be able to: effectively recognise a number of technical and scientific terms used in various fields of veterinary medicine independently use a number of scientific terms in a given context understand structure of scientific text recognise various types of cohesive devices used to express relations between text elements actively use some cohesive devices in a text to achieve text cohesion increase scope of general verbal understanding improve overall language and communication skills neded to communicate efficiently in a professional setting

MOLECULAR BIOLOGY AND GENOMICS IN VETERINARY MEDICINE

1. GENERAL INFO	RMATION		
1.1. Course teacher	Full prof. dr. sc. Maja Popović, PhD	1.6. Year of the study programme	2nd
1.2. Name of the course	Molecular biology and genomics in veterinary medicine	1.7. Credits (ECTS)	3,5
1.3. Associate teachers	Prof. Josip Kusak,PhD; Full prof. Ksenija Vlahović, PhD; Prof. Tomislav Gomerčić, PhD; Assoc prof. Daniel Špoljarić, PhD;	5+10+30	
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course	
1.5. Status of the course	Compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	10%
2. COUSE DESCRI	PTION		
2.1. Course objectives	Students will be able to recognize proteomics in veterinary medicin comprehend and check basic law phenotype expression in prokar quantitative phenogenetics of arti about molecular processes of i expression in prokaryotes and anim effects of spontaneous and induce the role and biomedical import molecules involved in the regulation during their embryomic developm methods of molecular biology appl their importance in prevention, diag biotechnology. They will realize p technology for health and welfar environment. To enroll in the course medicine students must first underg Medicine, Medical Chemistry, Bioc	e and biotechnology. They ys of inheritance at the molec yotes and animals, up to ficial selection. They will acq nformative macromolecules hals. They will be able to recogred mutations in animals. They ance of molecular signals a on of cell and life cycle in anim nent. Students will be able to icable in veterinary medicine an gnostic and therapy, as well as i possible risks of applying recor- re of animals and humans, e Molecular biology and genom go the following: Zoology, Bota	will be able to ular level, from qualitative and uire knowledge up to genome nize causes and will acquire with and differential nals, particularly or recognize the nd comprehend in the veterinary combinant DNA as well as for ics in veterinary ny in Veterinary
 2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to which the course contributes 	1. Recognition and understanding of biology and genetics in veterinary 2. Understanding of basic principl tissues.	medicine, public health and for	rensic.
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Understanding of molecular translation of animal information m Understanding health and ecolor animal organisms and cells, biotece enzymes, vaccines, medications) a Understanding genetic disorders 	acromolecules. ogical justification and risk of u hnological preparations (cytoki and genetically modified food o	ising transgenic nes, hormones, f animal origin.

	4. Collecting molecular genetic method for proventive, diagnestic and thereasy of
	4. Selecting molecular-genetic method for preventive, diagnostic and therapy of ill animal.
2.5. Course content broken down in detail by weekly class schedule (syllabus)	1 Historical aspects and future challenges (Past, present and future of molecular biology and genomic within the scope of veterinary medicine and public health, Concept and importance of genomics and proteomics in veterinary medicine); 2 Origin and evolution of animal cells at the molecular level (Molecular basis of animal embryonic organisms development; Comparative approach to the molecular structure of animal cells (mammals and birds) of interest for veterinary medicine; Animal cells as experimental models in veterinary medicine (epithelial, limbal cells, melanocytes, fibroblasts from domestic pig as a model system in biomedical research); 3 DNA, genes and heredity in animals (DNA molecule as a carrier of genetic information; Comparative review of animal karyograms (mammals and birds); Genetic maps of animals (mammals and birds); Application of Mendelian laws of inheritance in veterinary medicine; Sexually related characteristics in animals (colour of fur in "caliko cast", colour of coat in cattle, possessing or non possessing of horns in sheep, colour of feathers in hens etc.); Multiple genes of interest for veterinary medicine; Lethal genes of animals; Population genetics: natural and artificial selection at the level of herd and/or flock for health and productivity traits in species of interest for veterinary; phylogenetic relations (species, subspecies, breeds, geographic varieties) of animals (tholecular levei; Mutations of genomic DNA of animals (Molecular basis of animal cells metabolism; 5 Replication, self-amintenance and rearranging of genomic DNA of animals (Molecular basis of JDNA replication – origin and initiation of the replication.) DNA aprymerase. Replication fork, fidelity of the replication process. Direct damage reversal of DNA. Telomeres and telomerase (multiplying of chromosomal fubosome. Process of translation – hintiation, elongation and termination; Levels of structure of proteins); 8 Expression of genetic information in animals (Gene expression in animals (Edeback inhibition of t

	cytokines, interferons, vaccines of interest for veterinary medicine; Vectors for recombinant DNA. Expression of cloned genes. Detection of nucleic acids. Gene transfer in animals. Transgenic animal cells and organisms – GMO. Molecular genetics in diagnostic of inherited diseases of domestic animals (birds and mammals); Mutagenesis of cloned genes. Production of animal proteins in bacterial cells. Application of gene therapy <i>ex vivo</i> and <i>in vivo</i> in veterinary medicine. Application of reproductive and therapeutic cloning in veterinary medicine); 15 Cellular and molecular methods in veterinary medicine, public health and animal forensic genetics (Application of cellular and molecular methods in veterinary medicine; Hybrid technology. Animal germinal cell cultures. Animal cells culturing. Functional cell tests. Cytometric determination of lymphoid/myeloid cell profiles in peripheral blood and other body fluids of animals. Electrophoresis. Animal genomic DNA isolation. Animal RNA isolation. Methods for analysis of DNA, RNA and proteins. – Southern blot, Western blot, Northern blot. DNA amplification by polymerase chain reaction - PCR. DNA typing. DNA fingerprinting. DNA sequencing. DNA/RNA hybridization. DNA probes. DNA chips. <i>In situ</i> hybridization in immunocytochemistry).

value of the course	Written exam		Project		(other)	
	Written examProject(other)1. lectures attending: During semester a student must attend 15 lecture lessons in order to gain minimal 3 points. The maximum number of points from this evaluation element is 6.2. lab exercises attending: During semester a student must attend 36 exercise lessons in order to gain minimal 8 points. The maximum number of points from this evaluation element is 12. When the student upon the completion of teaching in the first try makes up for nonattendance of an exercise (excused and approved), points are added to the gained ones. If the student makes up for the unattended lessons in further tries the points do not count.3. activity during lab exercises: During the practical part of the lesson (exercises), which is 50 hours of teaching, the student must successfully complete scheduled tasks and receive teacher's signature for the completed assignments. Each neatly done and signed task is worth 0.3 points. During the exercise the student can achieve a total of 4.2 (4) points. During the practical part of the course, the student must achieve a minimum of 5 points and can achieve the maximum of 10 points.4. continuous assessment: During the "Physiology of domestic animals I" course two tests will be organized. The first test comprises general physiology and blood physiology, and the second one comprises muscle and nervous systems physiology. At each test a student must earn minimal 10 points in order to gain 20 points. In case a student does not gain the required point during the course he/she has the right to take three times the makeup preliminary exam, which will be organized.5. final exam: The final exam starts with a student's short analysis of results					
gained from the first four evaluation elements. At the final exam the sanswers the questions in oral form. The final exam comprises the matrix from endocrinology and it estimates the capability of a student to comphysiological processes. The maximum gained number of points at the exam is 40 points. Regardless the gained number of points from the evaluation elements, the student must show minimal knowledge at the exam in order to earn minimal 24 points. In case the student does not at the final part of the exam, the lecturer determines time for re-exam						he material to connect is at the final in the first four e at the final ies not satisfy

	mechanisms of specific body systems; 3. interpret functions of different body systems during different physiological conditions; 4. prepare biological samples for various laboratory analyses; 5. know the concept of modern diagnostic tools and machines (haematological and biochemical analyser, spirometry, ECG, EMG, EEG); 6. analyse and interpret the results of laboratory tests
2.5.Course content broken down in detail by weekly class schedule (syllabus)	 Cardiovascular system (Physiological features of cardiovascular system in domestic animals, physiology of cardiac muscle, heart as a pump, rhythmic excitation of the heart. Cardiac cycle – electric changes, mechanic changes, pressure and volume changes, sound changes; blood flow through heart. Striking volume, minute volume, regulation of heart pumping - auto regulation, humoral, endocrine and nervous regulation, cardiovascular receptors. Electrocardiography (Einthoven's triangle, uni – and bipolar electrocardiography). Energetic of heart pumping. Arterial and venous blood pressure, blood pressure regulation. Measurement of blood pressure and pulse - Valsalvin maneuver. Hemodynamics, peripheral circulation – arterial, capillary and venous blood flow, peripheral circulation negulation, metabolism of substances and liquids in tissues, lymph. Special blood flows: pulmonary, coronary, hepatic, brain circulation jetus blood, transport of oxygen and carbon dioxide in blood. Control of respiration; respiratory centres, factors that influence on respiratory centres. External breathing; inspiration, expiration, respiratory volumes, alveolar ventilation, intrapulmonary pressure and pressure and omnivores. Food taking, swallowing, salivation, regulation of digestion. Physiological features of digestion in carnivores, herbivores and omnivores. Food taking, swallowing, salivation, regulation of dissolve food into small intestine. Vomiting. A. Digestion in ruminants (Basic principles of symbiosis ruminant-micro population, motility; relation water-dry substances, oesophagus, rumination, gasters of viamins, metabolic pathways of low fatty acids, isoertion of subarceria and infusoria in digestion, efficacy of digestion in rumen. Digestion in admars, proteins and fats, ruminohepatic circle of nitrogen, synthesis of vitamins, metabolic pathways of low fatty acids, sportenion, for atohydrates, proteins and fats, ruminohepatic circle of nitrogen, synthesis of vitamins, metabolic pathways of low fatty acid

2.6.Format of instruction:	coenzymes, mechanism of excretion). 11. Metabolism of vitamins (Role of vitamins in metabolic processes, hydro soluble vs. liposoluble vitamins, absorption of vitamins, deposition in the body and vitamins excretion). 12. Antioxidative status (Free radical production during the metabolic processes, mechanism of free radicals action, effect of harm free radical activity, in vivo antioxidants, antioxidative enzymes, nonenzymatic antioxidative molecules, oxidative stress). 13. Bioenergetics (Basic principles of bioenergetics and metabolic rate, brutto energy of food, digestible energy, metabolizable energy, specific dynamic action of food, resting energy metabolism, importance of ATP, efficacy of production processes, biocaloimetry, respiratory quotient and its interpretation). 14. Exercise physiology (Energetic metabolism during exercise. Neuromuscular aspect of exercise. Exercise effect on cardiovascular system. Effect of exercising on breathing system. 15. Physiology of oviposition (Composition of egg, egg formation as enriched egg-cell, oviposition, control of oviposition). 16. Physiology of lactation (Poikilotherms, homeotherms, hibernation, thermoreceptors, organisms defence of hypothermia and hyperthermia). 18. Physiology of skin (Physiological features of skin and mucous membrane, skin glands). 19. Physiology of reproduction (Hormonal regulation, male and female reproductive system, pregnancy). 20. Behaviour in domestic animals, memory and learning (The role of the hormone system in food intake, sexual behavior, parental behavior and learning. Immediate, working and long-term memory). x lectures and the internet and t					le vitamins, cretion). 12. metabolic free radical nenzymatic tics (Basic gy of food, on of food, production tation). 14. exercise. diovascular ysiology of d egg-cell, lactation mogenesis, oregulation organisms gy of skin plands). 19. nd female ic animals, pod intake,

2. COURSE DESCRI	PTION					
2.1. Course objectives	The veterinary immunology course is taught to second-year veterinary medical students via fifteen didactic lectures. Students get familiar with basic immunology knowledge, infectional immunology and allergology, basic knowledge of autoimmune diseases and immunomodulation. Veterinary immunology is an important preclinical course which enables student to understand other courses such as microbiology, pathology, pharmacology, internal diseases and infectious diseases, particularly regards to pathogenesis and infectious diseases diagnostics and hypersensitivity, carrying out of immunoprophylaxis and assessment of immune status. During the study students become familiar with vaccines and their usage, simple immunology diagnostic procedures and use of commercially available vaccines.					
2.2. Course enrolment requirements and entry competences required for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	At the course students of veterinary medicine get familiar with infectional immunology and allergology, basic knowledge of autoimmne diseases and immunomodulation. Veterinary immunology is an important preclinical course which enables student to understand other courses such as microbiology, pathology, pharmacology, internal diseases and infectious diseases, particularly as regards pathogenesis and infectious diseases diagnostics and hypersensitvity, carrying out of immunoprophylaxis and immune status. During the study students become familiar with vaccines and their usage, simple immunology diagnostic procedures and use of commercially available vaccines.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	knowledge of innate immunity mechanisms, inflamation and its role in course of immune respose cells of immune system and their enrolment in immune raction, adaptive immuninty to microbs and parasites, mucosal immunitiy, understand function and role of complement system, cytokines, antigens, dendritic cells, major histocompatibility complex, cells and tissues of the immune system, understand mechanisms od adaptive immunity, antibody syntesis, immunity of fetus and newborn animals, mucosal immunity, use adoptive knowledge about hypersensitivity mechanisms, production and usage of vaccines, adjuvants and their immunomodulatory activity.					

2.5. Course content broken down in detail by weekly class schedule (syllabus)	 Immune system overview: Innate and adaptive immunity (2 hours lectures) Antigens and antibodies (2 hours lectures) Complement system; Cells and Tissues of the Immune System (2 hours lectures) The Major Histocompatibility Complex; Antigen Presentation and Cytokines (2 hours lectures) The Biology of T Lymphocytes; The Biology of B Lymphocytes (2 hours lectures) Hypersensitivity Mechanisms (2 hours lectures) Hypersensitivity Mechanisms (2 hours lectures) Immunotolerance (1 hour lecture) Antigen, antibody (2 hours exercises) Paired sera, titer (2 hours exercises) Agglutination, precipitation (2 hours exercises) ELISA, Complement-fixation test (2 hours exercises) Hemagluttination-inhibition assay (2 hours exercises) Preliminary exam; vaccination (1 hour exercises)

2. COURSE DESCRI						
2.1. Course objectives	The main goal of the course is to familiarize students with communication science as an interdisciplinary and integrative knowledge of its postulates in order to solve and improve their own communication, while the specific aims of the course are the acquisition of communication skills at interpersonal, social and media level, with the acquisition of knowledge of the correct relationship and use of verbal and nonverbal communication. Communication and relationship between veterinarians and patient owners, as well as other public (especially media), are extremely important and have a number of effects on treatment outcomes as well as satisfaction with treatment, compatibility, clinical outcome and quality of life, patient safety, teamwork, cultural sensitivity and reduced the number of complaints about the veterinarians work, and equally affect the presentation of a real image of the profession in public.					
2.2. Enrolment requirements and/or entry competences required for the course	Enrolled integrated study.					
2.3. Learning outcomes at the level of the programme to which the course contributes	Students will be familiar with the anthropological, communicational and psychological approach to multiple levels of communication. In particular, they will be able to properly use verbal communication and learn to properly evaluate and interpret nonverbal communication in different social and cultural environments, with particular emphasis on the relationship between the veterinarian and the client's owner. One of the more sensitive areas of biomedicine in terms of the importance of quality communication is access to communication in severe and incurable diseases, and particularly challenging opportunities for the clients to convey bad news, to recognize his emotional reactions, to listen actively, to include him in communication, to discuss the prognosis and the risk , assist in making a decision or encouraging its acceptance. But no less important is the public reaction to complaints about the profession, mostly in the media. Students will therefore be able to use the acquired communicative knowledge and develop the skills of critical observation, presentation and analysis of contemporary communication dynamics and models, particularly in interpersonal communication, as well as communication in public and the media, and will acquire the knowledge and skills required for public relations.					
2.4. Expected learning outcomes at	Students will be able to: analyze and compare various		,			

the level of the course (3-10 learning outcomes)	correctly interpret the underlying concepts - intrapersonal, interpersonal, verbal, nonverbal, social and media communication; argue the importance of knowing the communication dynamics and challenges of communication in veterinary; to describe the role of verbal and non-verbal communication in everyday and business life and prepare to talk about giving diagnosis and therapy; analyze and interpret the verbal and non-verbal communication of their interlocutors; use the acquired knowledge about the relationship of interpersonal								
	to evaluate the quanalyze and com in discussing the critically analyze diagnostic comm to argue the reas in the everyday a between veterina critical approach	ommunication and communication in the business environment; evaluate the quality of interpersonal communication; nalyze and compare communication relationships in dialogue and persuasion discussing the prognosis of treatment and risk communication; itically analyze and adopt the process of active listening in interpersonal agnostic communication; argue the reasons why it is necessary to know the communication dynamics the everyday and business environment and how to use them in relation etween veterinarian and owner of the client; itical approach to establishing communication with the public and the media analyzing crisis communication strategies.

		instruction (max. 20%)				
2. COUSE DESCRIP	TION					
2.1. Course objectives	Students gain knowledge on basic pathology including general aetiology, circulatory disturbances, cell injury and cell death, discyclia, accommodation processes and hypoxia, organisation processes and healing, inflammation and reparation, tumours and hereditary anomalies. Students learn some basic methods used in modern pathology, like autopsy and taking materials for additional laboratory research, especially emphasising pathohistological					
2.2. Course enrolment requirements and entry competences required for the course	research. Previous passing courses: Anatomy with organogenesis of domestic animals 1,2,3 and Histology and embriology.					
2.3. Learning outcomes at the level of the programme to which the course contributes	At the end of the course students will get knowledge in general pathology for further performing of education in other clinical subjects. The final goal upon the end of the studying is to be able to recognise a pathological process, make a right diagnosis and give the proper therapy, or if the animal perishes to get the right diagnosis in a proper way (by autopsy and other laboratory studies) thus act as a preventive measure for other animals.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	At the end of the course students will: get knowledge in general pathology for further performing of education in other clinical subjects be able to recognise a pathological process be able to make a right diagnosis for a purpose of terapy if the animal perishes to get the right diagnosis in a proper way (by autopsy and other laboratory studies) thus act as a preventive measure for other animals

	Participation at practica		5					10		
2.10. Grading and evaluating student work in class and at the final exam			Every student has the opportunity to carry out two autopsies, success at each is awarded with 0 to 5 points. (0 points= autopsy not carried out; 1 point= autopsy carried out, but insufficient knowledge of theory and technique; 2 points= autopsy carried out, but insufficient knowledge of theory; 3 points= autopsy carried out, good knowledge of theory and technique; 4 points= autopsy carried out, very good knowledge of theory and technique; 5 points= autopsy carried out, excellent knowledge of theory and technique). The range of 5 to 10 points student achieves by combining ie. adding two values earned by autopsies. (eg. student carried out one autopsy at which he/she demonstrated good knowledge of theory and technique [3 points] and another one at which he/she demonstrated excellent knowledge of theory and technique [5 points], that way the student achieves 8 points from participation at exercises).							

Continuous	20 (Written preliminary exam from	32 (Written
knowledge checking	General pathology chapter "Inflammation" 10 points; Practical partial exam from autopsy 10 points)	preliminary exam from General pathology chapters "Inflammation" 16 points; Practical partial exam from autopsy 16 points)
	Written preliminary exam from General pathology chapters "Inflammation", is made out of 32 questions, each point score from the written preliminary exam is awarded with 0,5 point.	
	Practical partial exam from autopsy is conducted by examining practical and theoretical knowledge of autopsy (0-9 points= student didn't demonstrate sufficient knowledge; 10 points= student demonstrated minimal knowledge; 11 points= student demonstrated sufficient knowledge; 12 points= student demonstrated satisfying knowledge; 13 points= student demonstrated good knowledge; 14 points= student demonstrated above average good knowledge; 15 points= student demonstrated very good knowledge; 16 points= student demonstrated excellent knowledge).

PATHOPHYSIOLOGY II

1. GENERAL INFORMATION			
1.1. Course teacher	Prof. Romana Turk	1.6. Year of the study	third
1.2. Name of the	Pathophysiology II	programme 1.7. Credits (ECTS)	6,5
course 1.3. Associate teachers	Prof. Nina Poljičak-Milas, Associate Prof. Mirna Robić, Associate Prof. Maja Belić	1.8. Type of instruction (number of hours L + S + E)	39+6+50
1.4. Study programme (undergraduate, graduate, integrated)	Integrated graduate and postgraduate study	1.9. Expected enrolment in the course	
1.5. Status of the course	obligatory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	
2. COUSE DESCRIPTION			
 2.1. Course objectives 2.2. Course enrolment requirements and entry competences required for the course 	During the course students become familiar with development of pathological events, disturbances of normal function during the development of disease processes, and therefore achieve the basis for logical understanding of symptomatology in diseases and diagnostic procedures. Participation in course Pathophysiology I (lectures, seminars, exercises).		
2.3. Learning outcomes at the level of the programme to which the course contributes	Students are enabled to describe digestive system pathophysiology, describe disturbances in hepatic and biliary function, define disturbances in carbohydrate, fat and protein metabolism, describe renal diseases pathophysiology, describe disturbances in blood and hematological system functions and heart diseases, describe disturbances in respiratory system functions, determine bilirubine concentration and liver enzymes activity and evaluate liver status, perform urinalysis and interpret results, evaluate red and white blood cells count in inflammatory and hematological diseases.		
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After succesful mastering, student will be able to: -describe and explain pathophysiology of digestive tract, liver and biliary system diseases -define metabolic disturbances - describe and explain kidney disease pathophysiology - describe and explain blood and hematological system disturbances and heart diseases - describe and explain respiratory system disorders - deterimne bilirubin concentration, and evaluate jaundice mechanism, determine liver enzymes function and evaluate liver status, determine lipid concentration and evaluate lipid metabolism - perform urinalysis and interpret results - perform hematological analysis and interpret results		
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Disturbances in carbohydrate, fat and protein metabolism 4 hours, pathophysiology of liver and biliary system diseases 6 hours, pathophysiology of hemopoetic system 6 hours, pathophysiology of digestive system diseases 10 hours, pathophysiology of cardiac function and shock 6 hours, pathophysiology of respiratory system diseases 4 hours, pathophysiology of renal diseases 3 hours. Seminars (6 hours): Individual students presentation on specific topics in mechanisms of diseases Excercises: lipid and lipoprotein disorders (2 hours), urine analysis (2 hours), bilirubin metabolism disorders (2		

	hours) clinical enzymology (2 hours), anatomy and physiology of hematopoetic system (2 hours), hematological analyses – blood cells counting (2 hours), determination of sedimentation rate and packed cell volume (2 hours), determination of hemoglobin concentration and calculation of erythrocyte constants (2 hours), determination of reticulocytes count, morphological changes of erythrocytes (2 hours), morphology of developmental stages of leukocytes (2 hours), determination of WBC and morphology changes of leukocytes (2 hours), differential cell count (2 hours), determination of eosinophils count and importance of changes (2 hours), differential WBC count (2 hours), interpretation of changes in total blood cell count in various species (2 hours), blood cells in birds (2 hours), blood cells in reptiles (2 hours), changes in blood cells morphology in neoplastic diseases of hematopoetic system (2 hours), blood cells in laboratory rodents (2 hours), preparation and inspection of bone marrow slides (2 hours), interpretation of laboratory findings (2 hours), preparation for exam (2 hours).

2.10. Grading and evaluating student work in class and at the final exam	Student work in class will be evaluated according to lectures, seminars and exercise attendance and active participation in exercises. That way students can gain minimal 16 and maximal 28 points. Knowledge checking in written form can assure minimal 20 and maximal 32 points. To acces the final exam students have to gain minimal points for attendance and knowledge checking. At the final exam, which will be in oral form, students will have to correctly answer the questions to gain minimal 24 or maximal 40 points. The final grade will be the sum of points gained by each criteria mentioned before. Grading scheme will be as follows: up to 59 points is grade F (insufficient), 60-68 points is grade E (sufficient), 69-76 points is grade D (sufficient), 77- 84 points is grade A (excellent).

2.10. Grading and evaluating student work in class and at the final exam	Participation of students at exercises will be evaluated with short oral tests. Continuous knowledge checking will be done with preliminary written exams which will be organised during the semester at one exercise term. The preliminary exams will be divided in two parts. Students are obliged to pass short oral tests and written exams in order to take the final exam. Regardless of a fact that a student gained the number of points from the first four evaluation elements on the basis of the makeup preliminary exam or not, the same rules are valid for forming the final mark. The final mark is formed on the basis of the total sum from all five evaluation elements: attending lectures, seminars, exercises, participation at seminars and exercises, continuous knowledge checking and final exam.

2.1. Course objectives 2.2. Course enrolment	 Pathogenesis of noninfectious, infectious and congenital diseases. Classification and nomenclature of diseases. Morphology of lesions characteristic for certain diseases. Macroscopic and microscopic recognition of diseases related to the clinical signs of the disease. Previous completion of General veterinary pathology course. 				
requirements and entry competences required for the course					
2.3. Learning outcomes at the level of the programme to which the course contributes	At the end of the course students will get knowledge in pathology of organic systems necessary for further performing of education in other clinical subjects. The final goal upon the end of the studying is to be able to recognise a pathological process, make a right diagnosis and give the proper therapy, or if the animal perishes to get the right diagnosis in a proper way (by autopsy and other laboratory studies) thus act as a preventive measure for other animals.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	By the completion of the course students should be able to: - analyze pathological changes (lesions) and classify them in order to determine specific animal diseases - analyze microscopic slides of basic pathologic processes and most important animal diseases - correlate macroscopic and microscopic changes together with the results of

	 carried out, report turned in + additional autopsy carried out, with demonstration of good knowledge; Histopathology: 0 points= most of the given histological preparations not drawn, 1 point= most of the given preparations are drawn, 2 points=all given preparations are drawn and most of the proper preparation descriptions are attached, 3 points= all given preparations are drawn and all of the proper preparation descriptions are neatly drawn and all of the proper preparation descriptions are attached, 4 points= all given preparation descriptions are neatly drawn and all of the proper preparation descriptions are neatly drawn and all of the proper preparation descriptions are attached ; Exercises-Konverzatorij: 0 points= given programme unit is not acquired, 1 point= the acquired programme unit, 2 points= acquired given programme unit, a points= acquired given programme unit, a points= acquired given programme unit, 	
	(a student must gain 5 points - two from Autopsy, two from Histopathology and one from Exercises-Conversatorium, in order to earn minimal 5 points)	
Continuous knowledge checking	20 (written preliminary exam from Pathology of skin 10 points; practical partial exam from Histopathology 10 points)	32 (written preliminary exam from Pathology of skin 16 points; practical partial exam from Histopathology 16 points)
	Written preliminary exam from Pathology of skin is made out of 32 questions. To pass this test student must reach a minimal score of 10 points, maximum being 16 points. To obtain minimal score student should correctly answer 20 questions, since every correct answer is awarded with 0.5 points (20x0.5=10 minimal points). It is important to notice that incorrect answers on this test are awarded with negative points (every incorrect answer). The total number of points scored at this test is gained by subtracting number of incorrect answers from correct ones. Unanswered questions will be omitted. Practical partial exam from histopathology is carried out by examining students knowledge of the histopathology slides.	

	To pass this part student must reach a minimal score of 10 points, maximum being 16 points.	
Final exam	24	40
(Oral exam)	(0-23 points=insufficient knowledge, 24-27 points=sufficient knowledge, 28- 31 points=good knowledge, 32-36 points=very good knowledge, 37-40 points=excellent knowledge)	
	(a student must show sufficient knowledge in order to gain minimal 24 points)	
TOTAL	60	100

Final exam:

Minimal conditions for passing the first, second, third and fourth evaluation elements are all summed up and they are worth 36 points all together. In order to take the final exam a student must gain the 36 points. The final exam consists of a written and oral part. Written part of the final exam will last for 60 minutes, and consists of two parts. The first part is recognition of macroscopic pathological changes (duration: 20 minutes). In this part, 10 photographs of pathological processes (one photo at 2 minute intervals) will be displayed on the LCD projector. For each photo, two questions will be asked, and the student can get maximum of 0.5 point per photograph (points are awarded in range from 0.25 to 0.5). The second part of the written exam is in the essav form. Each question will have guidelines to clarify what is expected in answers. Students will briefly describe some pathological processes. This part of the exam contains of 4 questions, and each question will be scored with a maximum of 5 points. A minimum of 15 points is required to pass the written exam, while a maximum of 25 points is possible. After scoring the written part of the exam, students who received a minimum number of points (15) have the right to access the oral part of the exam, while those who have a lower number of points receive a negative grade and do not have the right to access the oral part of the exam. Additional oral questions are askeed according to the same principle as the essay type of questions in the written part, and it is possible to achieve a maximum of 15 points in the oral part. The grade of the final exam is the one derived from the points that student has collected from the written and oral part of the exam. The maximum amount of points in final exam is 40.

Final evaluation:

Regardless of a fact that a student gained the number of points from the first four evaluation elements on the basis of makeup preliminary exam or not, the same rules are valid for forming the final mark. The final mark is formed on the basis of total sum from all six evaluation elements, according the following table

Points	Grade
up to 59	1 (F)
60-68	2 (E)
69-76	2 (D)
77-84	3 (C)
85-92	4 (B)
93-100	5 (A)

BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS

1. GENERAL INFO	RMATION				
1.1. Course	Associate Professor Emil	1.6. Year of the study	4 th		
teacher	Gjurčević	programme			
1.2. Name of the course	Biology and Pathology of Aquatic Organisms	1.7. Credits (ECTS)	2.5		
1.3. Associate teachers	Professor Ivana Tlak Gajger Assistant Professor Krešimir Matanović	1.8. Type of instruction (number of hours L + S + E + e-learning)	11+0+25+0		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course	-		
1.5. Status of the course	Obligatory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	level 1		
2. COUSE DESCRI	PTION				
2.1. Course objectives	During lectures and exercises students obtain general knowledge about breeding of aquatic organisms in order to comprehend the importance and role of veterinarians in recognising and controlling aquatic organism diseases. The skills which one must accomplish are proper examination of aquatic organisms, recognition of clinical signs, sampling and sending the materials for laboratory procedures, and also prevention and therapy in aquaculture.				
2.2. Course enrolment requirements and entry competences required for the course	Completed exams in next courses: General Veterinary Pathology, Pharmacology and Special Microbiology				
2.3. Learning outcomes at the level of the programme to which the course contributes	The course is linked to the basic veterinary courses in previous years of study and represents synthesis of previous veterinary disciplines applicable to the biology and pathology of fish and other aquatic organisms. The course prepares students for laboratory and field work in the field of biology and pathology of fish and other aquatic organisms.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Recognize fish species and other aquatic organisms important for breeding Obtain general knowledge about breeding of aquatic organisms Comprehend the importance and role of veterinarians in maintenance of fish health and human health Perform routine diagnostic examination, recognize clinical signs of disease Professional sampling and transport of samples for laboratory examinations Apply therapeutic measures and measures for prevention of disease				
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Apply therapeutic measures and measures for prevention of disease Lectures (11) Introduction (Importance of breeding of aquatic organisms); The aquatic environment (Basic water quality parameters for aquatic organisms); Natural and artificial spawning; Breeding of aquatic organisms; Viral fish diseases (Diseases prevented by Regulations of veterinary medicine and others important for breeding); Bacterial fish diseases (Diseases important for breeding); Parasitic fish diseases (Diseases caused by abiotic factors; Diseases of crabs and molluscs (Diseases prevented by Regulations of veterinary medicine and others important for breeding); Zoonoses.				

	Exercises (25) Systematic of aquatic organisms (Systematic of freshwater and marine fish and other aquatic organisms important for breeding); Anatomy of aquatic organisms (Fish and molluscs anatomy); Clinical examination (External examination and biopsy);							
	Sending of the materials for laboratory examinations; Ichthyosanitary measures; Virological, bacteriological and parasitological procedures (Specified for aquatic organisms).

2. COUSE DESCRI	PTION	•••			
2.1. Course objectives	By attending the Game breeding and management course students will gain the knowledge on peculiarities of natural and intensive breeding of different game species. They will gain the basic knowledge on natural sciences, animal welfare, handling and breeding as well as on legislative, Croatian and EU regulations of the aforementioned activities. The subject curriculum is formed in a way to inspire the bioethical approach to the game breeding, which is based on the newest welfare understanding and traditional game breeding system. Attendants can meet the essentials of selective work in game breeding, the models of intensive breeding of large and small game and guidelines for the game production. In practical part students gain knowledge and competency of game breeding, keeping and management particularly by sex and age determination, estimation of game breeding value, social structure evaluation, breeding technology comprehension (natural and farm breeding of small and large game) with etiologic base and welfare satisfaction at breeding and handling with stress on loading, hunting, binding, dazing, transport, weighing, operator risk determining etc. In that way the attendants will be able to master specialised skills and competence in expert activities of planning, conduction and improvement of intensive and natural				
2.2. Course enrolment requirements and entry competences required for the course	game breeding. To meet course entry competences student must have attended all courses of VI semester and passed the examination in the subjects General Pathology and Special Pathology				
2.3. Learning outcomes at the level of the programme to which the course contributes	 Implementation of intensive farming technology on wildlife species Designing and sizing of breeding capacity Application of bioethical principles in the breeding planning and implementation Planning and implementation of natural and intensive game farming Design and implementation of health surveillance in game breeding Meeting the welfare of game by types of farming Capture and restraint of wildlife, individually and collectively Risk assessment in manipulation with wildlife species The organization and implementation of game transportation Preparation in game breeding 				

GAME BREEDING AND MANAGEMENT

2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Development and Implementation of Game management plan and Game protection plan Modeling of intensive farming of large and small game species Design of a farm for breeding large and small game Design and implementation of Hunting management plan Planning and design of game management and technical facilities Operation and maintenance game management and technical facilities Nutrition and winter feeding of game Introducing and rewilding of reared game Estimation of the economic and rearing value of game and form game 					
	Keynote lecture - 1 hour Wildlife Management I - 1 hour	Presentation of the curriculum, organization of lectures and exams; defining concepts - wild animals, game, wildlife and protected species, hunting management; models of farming. Game and hunting by the Hunting Act, ZOL, types of hunting grounds; Establishing redistribution of fields and forests; Population dynamics and rearing age, game planning in the natural rearing of game species				
	Wildlife Management II - 1 hour Selection - 1 hour	Components of HMP, glossary, definition of the hunting ground evaluation, determination hunt- productive area and hunt-management capacity Funds of game – reproductive and total stock, growth and accretion, gain coefficient according to the type of hunting grounds and solvency. Selection work in the breeding cultivation of large game, the basic principles, selection according to the gender, selection by age categories.				
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Arrangement and maintenance hunting ground - 1 hour Detriments on game and form game - 1 hour	Technical arrangement of hunting ground, hunting management and technical facilities. Damage to wildlife and damage from wildlife, game road kills; measures of detriments prevention; detriments on game by nature				
	The principles of selection in game breeding, estimate age and gender - 2 hours	Selection in natural rearing of game, identification of game age categories, perspective and non perspective male and female, quality selection models and their adjustment to breeding goal, culling types, Practical work - selection in red deer, fallow deer, roe deer and mouflon population. Estimation of age.				
	Practical work in hunting ground – 6 hours	 Setting up and dismantling electrical fences Measures for technical arrangement of hunting grounds (HM and T objects) Hygienic sanitation and maintenance of the HG and T facilities IR cameras for wildlife cartography Survey of the field, drive counting 				
	Natural rearing of game and HMP - 2 hours	Practical: determining hunt productive area and prudential grades; calculation of the breeding stock, increment and culling, Determining hunt management capacity; fund development of big and small game species

INTERNAL MEDICINE

1. GENERAL INFOR	MATION				
1.1. Course teacher	Assoc. Prof. Marin Torti,	1.6. Year of the study	IV		
	PhD, DVM	programme	10		
1.2. Name of the course	Internal Medicine	1.7. Credits (ECTS)	16		
1.3. Associate teachers	Prof. Damjan Gračner, PhD, DVM, Prof. Nada Kučer, DVM, PhD, Prof. Nikša Lemo, PhD, DVM, DECVD, Prof. Vesna Matijatko, DVM, PhD, Assoc. Prof. Mirna Brkljačić, PhD, DVM, Assoc. Prof. Ivana Kiš, PhD, DVM, Assoc. Prof. Marin Torti, PhD, DVM, Assist. Prof. Martina Crnogaj, PhD, DVM, Assist. Prof. Jelena Gotić, PhD, DVM, Assist. Prof. Darko Grden, PhD, DVM, Assist. Prof. Iva Šmit, PhD, DVM, Tea Dodig, DVM, Maša Efendić, DVM, Ines Jović, DVM	1.8. Type of instruction (number of hours L + S + E + e-learning)	L90 + E120		
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course	10		
graduate, integrated) 1.5. Status of the course	compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIP	TION	-			
2.1. Course objectives2.2. Course enrolment requirements and entry competences	Diagnosis and treatment of the diseases of gastrointestinal, cardiovascular, respiratory and urinary system, as well as diagnosis and treatment of neurological, endocrine, hematopoietic, neoplastic, and skin diseases in domestic animals. Basics of veterinary emergency and critical care medicine. Anatomy of domestic animals, physiology of domestic animals, pathophysiology of domestic animals, pharmacology, clinical propedeutics.				
required for the course					
2.3. Learning outcomes at the level of the programme to which the course contributes	During studying internal medicine students acquire and consolidate their medical logics based on medical premises gained in study of preclinical subjects. Such an approach enables forming of experts disposed to new knowledge and independent on stereotypes. They check their approach by laboratory diagnostic aids. Upon acquisition on teaching matter a student will be able to examine the patient, interpret the clinical signs and detect symptoms of disease from the history, establish a proper problem list and differential diagnoses list, decide on the use of laboratory parameters to confirm the diagnosis and finally determine the proper treatment of the diagnosed diseases at the level of general veterinary medicine. Thereby, a student is well prepared and trained to take part in attending the further clinical courses, as well as those belonging to public veterinary health.				

2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Students will be able to establish a diagnosis based on disease history and clinical examination. Students will have adequate knowledge to make a list of differential diagnoses and to decide which advanced clinical methods should be used to establish a final diagnosis. Students will be able to interpret the results of various findings. Students will be able to select an adequate treatment according to symptoms and diagnosis. Based on the trend of various findings students will be able to modify the treatment. Based on aforementioned outcomes, students will be able to establish a prognosis.
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Skin diseases. Inflammatory diseases of the skin. Pruritus. Allergies. Otitis externa. Dermatology of cats. Immune-mediated skin diseases. Burns, hypovitaminoses, endocrine imbalances. Hematopoietic system diseases and clinical pathology. Anaemia. Polycythaemia. Leukopenia, leucocytosis, leukaemia. Coagulopathies, haemorrhagic diatheses. Blood types, blood transfusion. Interpretation of laboratory results – metabolites. Gastrointestinal system diseases. Clinical signs and diagnostics of digestive system diseases. Mouth, pharynx, and oesophagus. Gastric dilatation volvulus. Gastritis, gastric ulcer. Inflammatory bowel disease. Enteritis, colitis, ileus, constipation. Hepatic diseases – nepatitis, portosystemic shunts, hepatic lipidosis. Pancreatic diseases – acute and chronic pancreatitis, exocrine pancreatic insufficiency. Urinary system diseases. Clinical signs and diagnostics of urinary tract diseases. Acute renal failure. Chronic renal failure. Lower urinary tract inflammation, urolithiasis, FLUTD, urethral obstruction in cats. Cardiovascular system diseases. Clinical heart diseases. Valvular diseases. Cardiomyopathies. Arrhythmias. Pericardial diseases. Respiratory system diseases. Diagnostics of endocrine diseases of larynx and trachea. Bronchitis. Pneumonias. Pneumotnorax, pleural effusions. Endocrine diseases. Diagnostics of endocrine diseases. Diabetes insipidus. Hypothyroidism, hyperthyroidism. Hypoadrenocorticism, hyperadrenocorticism. Diabetes mellitus. Diabetic ketoacidosis and other complication of diabetes. Insulinoma and other hormonally active tumours. Nervous system diseases. Paraneoplastic syndrome. The most frequent tumours – lymphoma, mast-cell tumour, melanoma, hemangiosarcoma, marmmary gland adenocarcinoma. Life quality assessment and palliative care of patient with malignant tumours. Veterinary emergency and critical care medicine. Triage and CPR. Respiratory diseases. Shock. Selected emergencies in small animal medicine. Critical care. Diseases of ruminants. Alimentary indigestions. Trau

Swine diseases. Anaemia in piglets, hypoglycaemia in piglets, multiple degeneration of muscles and myocardium in swine. Peptic ulcer. Specific vitamin and mineral deficiencies.
Equine diseases. Clinical signs, diagnostic work-up and treatment of equine diseases. Equine cardiology: overview of most common equine heart diseases. Recurrent airway obstruction (equine asthma) and other respiratory diseases. Colic. False colic and urinary tract diseases. Exercise (paralytic) myoglobinuria and equine atypical myopathy.
Neurology of large animals. Dermatology of large animals. Small mammal diseases. Selected diseases of ferrets: insulinoma, FADC, lymphoma, cardiomyopathies. Selected diseases of rabbits and rodents (malocclusion, gastric stasis, pneumonias, urolithiasis, vestibular disease).

2. COUSE DESCRIP	ΓΙΟΝ				
2.1. Course objectives	Within the course framework, the hormonal regulation of the sexual a clinical signs of sexual cycle and Students will also be thoroughly fa ovulation, fertilization, nidation pregnancy diagnostics and pat parturition, physiology and pathology	cycle of domestic anima the artificial insemination amiliarized with oogenes and placentation, as hology of pregnancy	als, including phases, of domestic animals. sis, the mechanism of well as pregnancy, and the phases of		
2.2. Course enrolment requirements and entry competences required for the course	Students are required to previously complete the courses of the General Veterinary Pathology and Special Veterinary Pathology. They should be able to take the animal's history, restrain it in a safe way and perform a general clinical examination. The student should be able to propose diagnostic examinations and understand the principles of the therapeutical approach which could be performed on the gynaecologic patient. Also, students should have basic knowledge of sexual hormone structure and function, anaesthesiology protocols and aseptic and antiseptic principles.				
2.3. Learning outcomes at the level of the programme to which the course contributes	To be able to independently take the gynaecologic history and perform gynaecological / andrological examinations (including udders) of female and male animals, including rectal palpation and ultrasound checking, in order to define the animal's reproductive status. To be able to timely perform artificial insemination, understand the principles of semen collection and insemination dose, and perform basic semen tests. To be able to properly assist labour and apply obstetrical methods in case of need.				

OBSTETRICS AND REPRODUCTION I

	To check post-parturient animal and determine if the puerperium of the animal is running physiologically; and if not, to be able to assess the proper therapeutic approach.						
	To asses general conditions at the farm level which influence optimal animal reproduction and milk production, overall animal production at the farm level, animal welfare and safety of animal products.						
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	to explain the neurohormonal regulation of sexual cycles of domestic animals; to independently perform andrologic and gynaecological examinations of domestic animals; to clearly distinguish phases and clinical specificity of the sexual cycle of domestic animals; to apply proper methods of pregnancy diagnostics and artificial insemination; to be acquainted with the physiology and pathology of puerperium; to be acquainted with the physiology and pathology of the mammary gland; to identify and explain the stages of parturition.						
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Introduction to the hormonal regulation of the sexual cycle; sexual cycle specificity in cows and heifers; sexual cycle specificity in mares; sexual cycle specificity in sows; sexual cycle specificity in sheep and goats; sexual cycle specificity in bitches and queens; oogenesis and folliculogenesis; hormonal regulation of ovulation; fertilization and embryo nidation; placentation; physiology of pregnancy, pregnancy diagnostics; physiology of delivery; spermiology; artificial insemination; physiology and pathology of puerperium; physiology and diseases of mammary gland.						
2.6. Format of instruction:	☑ lectures ☑ independent assignments 2.7. Comments: ☑ seminars and workshops ☑ multimedia and the internet 2.7. Comments: ☑ on line in entirety ☑ laboratory ☑ work with mentor						
2.8. Student responsibilities	☐ field work (other) Students are obliged to attend at least 30 lecture hours and 73 hours of practicals. A minimum of 5 (max. 10) points must be gained during practicals, which consists of the completion of a minimum of 3 (max. 6) positively evaluated assignments imposed by teacher and based on active participation during practicals (signed off by the teacher), 1 (max 2) field assignment and 1 (max 2) positive answer on short oral exams.						
2.9. Screening student work (name	Class attendance	0.75	Research		-	Practical training	
the proportion of ECTS credits for	Experimental work	-	Report		-	Activity	2.75
each activity so that the total number of	Essay Tests	- 4	Seminar essay Oral exam		- 5	(other) (other)	
ECTS credits is equal to the ECTS value of the course)	Written exam	-	Project	-	(other)		
2.10. Grading and evaluating student work in class and at the final exam	By attending lectures the student gains 3-6 points (60 lecture hours; each lecture hour equals a 0.1 coefficient). Students must attend at least 30 lecture hours. By attending practicals the student gains 8-12 points (105 exercise hours; each exercise hour equals a 0.11 coefficient). Students must attend at least 73 exercise hours. The activity at the exercises is evaluated with 5-10 points; the activity will be evaluated through short oral exams, field tasks and practical assignments. There will be a progress test performed during the semester consisting of 10 questions and performed in written form.						

	The progress test brings 32 points (e being the minimum required to pass term is compulsory (missing the main 3 additional progress test terms w students. (A passing grade for) the progress test final exam. However, the progress test grade book. If the student fails the pro- whole course over again. Anaesthesia maesthesia. ation. Healing and aused by electricity,		
2.2. Course enrolment requirements and entry competences required for the course	Upon gaining of provided skills and knowledge a student is capable of taking history, treating and restraining the animal in a safe and a human way, teaching the others the same techniques, and performing the whole clinical examination. The student is ready to give his/her opinion of the other additional diagnostic examinations which are to be done on the surgical patient. In postoperative period a student can determine the way of treatment (pain control, treatment with antibiotics, physical therapy and other was of treatment). By this programme a student acquires knowledge of performing the				

	surgical and anaesthesiologic protocol and taking records in the book of a patient in a way understandable to his/her profession and the public. He/she is well educated to apply correctly the principles of sterilization of surgical equipment and principles of aseptic surgery. The student is capable to apply safely the sedimentation, local and general anaesthesia and to estimate and control the pain. He/she is ready to recognise states indicating appropriateness of euthanasia and make it in a human way understanding the emotional state of the owner. The student can apply techniques of first aid 25 points (first exercises – thematic – participation is not evaluated, second exercises – thematic – participation is not evaluated, third exercises – 5 points max, fourth exercises -5 points max., fifth exercises – thematic –participation is not evaluated, seventh exercises -5 points max., eighth exercises – 5 points max., ninth exercises -5 points max.) = keeping records of anaesthesiologic protocols in an orderly manner
	25 points (first exercises – thematic – participation is not evaluated, second exercises –thematic – participation is not evaluated, third exercises – 5 points max, fourth exercises -5 points max., fifth exercises – thematic –participation is not evaluated, sixth exercises – thematic –participation is not evaluated, seventh exercises -5 points max., eighth exercises – 14 points max., ninth exercises -5 points max) = active participation in the work with patients
	The number of points students must gain in order to earn minimal 5 points is 37,5. Participation of students at exercises will be checked continuously.
2.3. Learning outcomes at the level of the programme to which the course contributes	To be able independently take history, treating and restriing animal in safe and a human way and performing the whole clinical examination. To be ready to give his/her opinion of the other additional diagnostic examinations which are to bed one on the surgical patient. To be able to determine the way of treatment in postoperative period (e.g. pain controle, treatment with antibiotics, physical therapy and other what was recquired). To be able to perform the surgical and anesthesiologic protocol and taking records in the book of a patient in a way understandable to his/her profession and the public. To able to applay correctly the principles of sterilization of surgical equipment and principles of aseptic surgery. To be able to applay safely the sedimentation local and general anesthesia an d to estimate and control the pain. To be albe to reciognase states indicating appropriatiens of euthanasia and make it in human way understanding the emotional state of the owner.
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	to take history, treating and restraining the animal in a safe and human way and perform the whole clinical examination; to propose the other additional diagnostic examination which are needed to get objective status of the surgical patient; to determine the way and content of treatment in postoperative period of patient; to perform to surgical and anasthesiologic protocol and taking record in the book of patient in a way understandable to his/her profession and the public; to applay safely the sedimentation, local and general anaesthesia and to estimate the control od the pain; to recognise states indicating appropriateness of euthanasia and make it in a human way undestandable to the emotional state of the owner; to applay techniques of first aid giving in case of bleading, wounds, burns and congelations;

	to perform techniques involving workup and bandaging the wounds, imobilisation and arresting bleading; to assist during surgical procedures, honering the principles of asseptic surgery; to be able to conservatively and surgically workup small wounds; to be acquainted with basic techniques of stiching of organs and thessues and to choose adequate stiching material;						
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Introduction to surgery, organisation of work at the clinics. Premises and equipment of the surgical clinics; Surgical instruments; Procedure, approach, inhibition and refutation of surgical patients; History and surgical propedeutics; Principles of surgical asepsis and antisepsis. Sterilization and disinfection; Introduction to anaesthesiology. Premedication and sedation. Anaesthesia classification. Local and regional anaesthesia. Intravenous anaesthesia; Inhalatory anaesthesia; Shock: Diagnostics and treatment; Therapy with liquids and acid-base equilibrium; Disorders of coagulative mechanism and haemostasis; Injuries and wounds; Definition, aetiology and classification. Healing and basic principles of treatment; Surgical procedures of burns, congelation and injuries caused by electricity, radiation and chemicals; Surgical techniques of knotting; Materials for stitching; Bandages, compresses, drainage; Infections and the use of antibiotics in surgery; Essential reconstruction surgeries (stitches, lobes, grafts)						
2.6. Format of instruction:	x lectures x independent 2.7. Comments: seminars and assignments assignments 2.7. Comments: workshops multimedia and the internet assignments on line in entirety laboratory aboratory partial e-learning x work with mentor field work (other)						
2.8. Student responsibilities	attending lectures attending exercises participation at exercises continuous knowledge checking final exam

2.10. Grading and evaluating student work in class and at the final exam	Upon gaining of provided skills and knowledge a student is capable of taking history, treating and restraining the animal in a safe and a human way, teaching the others the same techniques, and performing the whole clinical examination. The student is ready to give his/her opinion of the other additional diagnostic examinations which are to be done on the surgical patient. In postoperative period a student can determine the way of treatment (pain control, treatment with antibiotics, physical therapy and other was of treatment). By this programme a student acquires knowledge of performing the surgical and anaesthesiologic protocol and taking records in the book of a patient in a way understandable to his/her profession and the public. He/she is well educated to apply correctly the principles of sterilization of surgical equipment and principles of aseptic surgery. The student is capable to apply						

safely the sedimentation, local and general anaesthesia and to estimate and control the pain. He/she is ready to recognise states indicating appropriateness of euthanasia and make it in a human way understanding the emotional state of the owner. The student can apply techniques of first aid giving in case of bleeding, wounds, burns or congelations. The techniques involve workup and wrapping of wounds, immobilisation and arresting bleeding. He/she can conservatively and surgically workup small wounds. He/she is acquainted with basic techniques of stitching of organs and tissues and with the choice of stitching materials. 25 points (first exercises – thematic – participation is not evaluated, second exercises –thematic – participation is not evaluated, second exercises -5 points max., fifth exercises – thematic –participation is not evaluated, second is not evaluated, sixth exercises – thematic –participation is not evaluated, second seventh exercises -5 points max., eighth exercises – 5 points max., ninth exercises -5 points max.) = keeping records of anaesthesiologic protocols in an orderly manne.
25 points (first exercises – thematic – participation is not evaluated, second exercises –thematic – participation is not evaluated, third exercises – 5 points max, fourth exercises -5 points max., fifth exercises – thematic –participation is not evaluated, sixth exercises – thematic –participation is not evaluated, seventh exercises -5 points max., eighth exercises – 14 points max., ninth exercises -5 points max) = active participation in the work with patients
The number of points students must gain in order to earn minimal 5 points is 37,5. Participation of students at exercises will be checked continuously.
During semestar three (3) preliminary exams will be organized. Preliminary exames will be held during practical exercises. Each preliminary exame contains eleven (11) questions. Each correctly answered questions is worth one (1) point. Student must accomplish 21 points from all three (3) preliminary exames. But each individual preliminary exam should have minimum 7 correct answers. With this element of graduation maximum of 32 points could be accomplished student that did not achieve minimum of 7 points per each preliminary exame, can apply for makeup exam which includes material from all thematic exercise and will be hold after the end of semester.
Student that manages to solve makeup exam with more than halve correct answers has opportunity to aces to the final exam.
The continuous knowledge checking will beperformed in formo f 3 entireties:
 The surgical asepsis and surgical instruments (4. and 5. chapters of the textbook " The veterinary surgery and anaestesiology" edited by Matičić & Vnuk, in further text "Textbook") The stitching materials and basic techniques of stitching of organs and tissues (the 6. and 7. chapter of the "Textbook") And finally the bondages, compresses and drainage and infection of surgical patients, containing antimicrobe prophylaxis (chapter 8. and 18. of the "Textbook")
Within this element of valuation it is possible to obtain maximum 32 points, (24 points x coefficiant 1.3333)

	point-system value and by a grade adequate to its v	ry, orthopaedi lent 1,3333). e questions the cersises time. hose points. he minimal nu- le signature of he course: "S hat student can uous knowled ined only with make up for e sed absence. third and forthe the all togethe of results gail at a student can be 5 question exam (Studen canswer. 1. GENERAL INFORMATION Assist. Prof. Andrija Musulin 1.6. Year of the study 4 1.1. Course teacher programme 1.2. Name of the Surgery, Orthopaedics and 5.5 1.7. Credits (ECTS) course Ophthalmology II Dražen Matičić, Full Professor, 30+0+45 PhD, DMV, Prof Boris Pirkić, PhD, DMV; Dražen Vnuk, Full Professor, PhD, DMV Prof Mario Kreszinger, PhD, DMV Tomislav Babić, Assoc, Professor, PhD. DMV 1.8. Type of instruction 1.3. Associate Nika Brkljača Bottegaro - Assoc. (number of hours L + S + teachers Profwssor. PhD, DMV E + e-learning) Ozren Smolec, Assoc. Professor, PhD, DMV Mako Pećin, Assist, Professor, PhD. DMV Andrija Musulin, Assist. Professor, PhD. DMV 1.4. Study Integrated undergraduate and programme graduate study of veterinary 1.9. Expected enrolment in (undergraduate, medicine the course graduate, integrated) compulsory 1.10. Level of application of 1.5. Status of the e-learning (level 1, 2, 3), course percentage of online instruction (max. 20%) 2. COUSE DESCRIPTION Objective is to introduce the student with the basic knowledge in 2.1. Course ophthalmology, abdominal and thoracic surgery, and oncology of domestic objectives animals. Upon gaining of provided skills and knowledge a student is capable of recognising particular diseases of head and neck in small and large animals (dehornisation in bovine) and starting the basic treatment. The student is acquainted with the diseases of chest, bases of their treatment and stabilisation of the patient with the chest diseases as well as with indication for referring such patients to referral clinics. He/she is trained to recognise particular types of hernia and basis of their treatment. The student is acquainted with indications for castration in particular animal species, with the way of performing the castration and post castration complications. He/she can 2.2. Course recognise diseases of digestive system and of urinary and sex organs in dogs enrolment and cats, undertake the stabilisation of the patient and estimate indication for requirements and its referring to a referral clinic. The student is acquainted with the basic entry competences laparotomy in ruminants and possibilities of treatment of diseases of digestive required for the system. He/she can recognise diseases of abdomen in horses evident in course colica, approach a team treatment of the colica, undertake the stabilisation of the patient and estimate indication for a surgical treatment and its referring to a referral clinic. A student is acquainted with basic postulates of surgical approach and techniques of treatment of oncologic patients, and with a necessity of multidiscipline consideration of treatment modality. Upon gaining of knowledge and skills the student will be able to recognise diseases of eye in small and large animals treated during the teaching lessons, to start the treatment and treat them in emergency case, to estimate indication for a surgical treatment and for its referring to a referral clinic. 2.3. Learning In the 8th semester students broaden their knowledge and skills gained in the outcomes at the previous semester in order to improve the quality of their competence.

DISEASES AND TREATMENT C	OF DOGS AND CATS I
--------------------------	--------------------

1. GENERAL INFORM	IATION			
1.1. Course teacher	Assist. prof. Hrvoje Capak	1.6.Year of the study programme	5th year	
1.2.Name of the course	Diseases and Treatment of Dogs and Cats I	1.7.Credits (ECTS)	3,5	
1.3.Associate teachers	Prof. Dražen Matičić, Prof. Boris Pirkić, Prof. Dražen Vnuk; Assist. Prof. Marko Pećin, Assist. Prof. Andrija Musulin, Petar Kostešić, PhD, Valentina Plichta, DVM, Mirta Vučković, DVM, Marija Mamić, DVM Assoc. Prof. Jelena Šuran Prof. Andreja Gudan Kurilj, Assoc. Prof. Jelena Šuran Prof. Andreja Gudan Kurilj, Assoc. Prof. Marko Hohšteter, Assist. Prof. Ivan-Conrado Šoštarić - Zuckermann, Lidija Medven Zagradišnik, PhD, Doroteja Huber, PhD, Ivana Mihoković, DVM Prof. Damir Stanin, Assoc. Prof. Zoran Vrbanac, DACVSMR, DECVSMR; Assoc. Prof. Zrinka Štritof, Assist. Prof. Josipa Habuš, Assist. Prof. Vladimir Stevanović, Matko Perharić, PhD Assoc. prof. Hrvoje Valpotić, Assist. Prof. Diana Brozić	1.8.Type of instruction (number of hours L+S+E+ e-learning)	Exercises 45 hours	
1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9.Expected enrolment in the course	15-20	
1.5.Status of the course	Obligatory elective1.10.Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIPT				
2.1.Course objectives	SURGERY ORTHOPEDICS AND OPHTHALMOLOGY Students widen their ophthalmology knowledge and skills acquired in eighth semester. Practical exercises are focused at ocular examination (tonometry, biomicroscopy and fundoscopy), and also students can observe nasolacrimal canal irrigation in dogs. Students start during exercise practical dentistry course. First, they repeat oral cavity anatomy and physiology. Afterward, they learn dentistry instruments and equipment and principles of dentistry			

	diagnostic. They will be able to recognize which condition they can treat and which they have to send to referral clinic. Students will know and principles of periodontal diseases. After listening of this subject, students will know to determine and mark each tooth and to examine oral cavity. They must recognize and treat some diseases, primary cremor dentium, paradontosis and gingivitis. Principles of teeth extraction will be presented. Students had anesthesia in seventh semester, but they have also clinical cases where it is necessary to perform anesthesia to the end of study. In this subject, critical points of canine and feline anesthesia, preanesthetic exam of patients and anesthesia of emergency patient will be presented. Student will be ready to perform less complicated cases of anesthesia under supervision of teacher. Basic principles of fracture management and practical work with implants at plastic models of bone will be presented. Students will have basis to attend specialised osteosynthesis course in the future.
	INFECTIOUS DISEASES OF DOGS AND CATS
	Students will widen acquired knowledge about differential diagnosis and infectious disease treatment in dogs and cats. Students will also learn to perform objective diagnosis of infectious diseases by simple methods available at daily basis. Students will also learn about new drugs, registered for treatment of infectious diseases (immunomodulatory drugs and antiviral drugs) and general prophylaxis and immunoprophylaxis.
	PATHOLOGY
	The most often dermatological diseases and skin tumors will be presented to students and the importance of cytological an pathohistological diagnosis in final diagnosis will be focused as factor for determination of prognosis and therapeutic efficiency. Tumor and skin biopsy samples collecting will be repeated as important step to achieve diagnosis.
	RADIOLOGY (X-ray, Computed Tomography) AND ULTRASOUND
	Students will be able to recognize and describe the most often diagnosis of bones and joints, and thoracic and abdominal diseases using different diagnostic imaging modalities (radiography, basic CT and ultrasonography).
	CLINICAL PHARMACOLOGY
	Students will repeat acquired knowledge of pharmacology at clinical cases and it will be also add some chapters which were not sufficiently studied in colegium Pharmacology. The focus will be put on rational use of antibiotic and antiparasitic and correct drug use in cats.
2.2.Course enrolment requirements and entry competences required for the course	Enrolled tenth semester
2.3.Learning outcomes at the level of the programme to which the course contributes	
2.4.Learning outcomes expected at the level of the	-to perform ocular examination and determine indication of nasolacrimal canal irrigation

-to diagnose and treat specific diseases of oral cavity
-to conduct less demanding anesthesia in dogs and cats
-to recognize specific implants for osteosynthesis and to know indication for their use
-to recognize specific histopathological samples of dermatological diseases and the most often tumors in dogs and cats
 to perform objective diagnosis of infectious diseases by simple methods available at daily basis and to treat infectious diseases using of different drugs
-individual approch to general prophylaxis and immunoprophylaxis
-to recognize the most often diagnosis of bones and joints, and thoracic and abdominal cavity diseases using different diagnostic imaging modalities
-to rational use antibiotics and antiparasitics and to use correctly drugs in cats
-to evaluate nutritional status, food and feeding procedure and to correct meal during dietary management of specific disease
SURGERY ORTHOPEDICS AND OPHTHALMOLOGY (16 hours)
1.Tonometry 2.Biomicroscopy and fundoscopy 3. Nasolacrimal canals irrigation in small animals 4. Anatomy and physiology of oral cavity 5.Instruments and equipment for dentistry 6. Diagnostic in dentistry and interpretation of radiographs of oral cavity 7.Basic of periodontal diseases 8. Principles of teeth extraction 9.Special consideration about canine and feline anesthesia 10. Anesthesia of emergency patients 11. Principles of osteosynthesis- practical approach
INFECTIOUS DISEASES OF DOGS AND CATS (6 hours)
 1.Infectious gastroenteritis of dogs and cats 2. Retroviral infections of dogs and cats (new therapy modalities) 3. Rapid diagnostic assay in dogs and cats 4. Imunomodulators and antiviral agents 5. General prophylaxis of infectious diseases 6. Imunoprophylaxis
RADIOLOGY AND ULTRASOUND (6 hours)
1.Fractures, arthrosis, elbow dysplasia, OCD, hip dysplasia, pattelar luxation and spondylosis deformans 2. Diaphragmatic hernia, pneumonia, mitral insuficiency, dilatative cardiomiopathy, hypertrophic cardiomiopathy in cats 3. Metastasis, pyometra, gravidity, hernia, ileus, urolithiasis, intraabdominal tumors
PATHOLOGY (6 hours)
1.Citology in dermatology 2. Definition of morphology of primary and secondary skin lesions 3. Patomorphology and patohistology of the most common dermatologic diseases: atopic dermatitis, bacterial, viral and parasitic dermatitis 4. Tumors definition and morphology (histopathologic examination, tumor grading and tumor margins) 5. The most common skin tumors (histiocytoma, mast cell tumor, lymphoma) 6. The mammary gland tumors (incidence, pathohistologic tumor classification and determination of malignancy grade

	CLINICAL PHARMACOLOGY (5 hours)					
	1.Treatment of staphylococcal dermatitis 2. Treatment of caninie otitis externa 3. Antiparasitic drug in dogs- principles of use 4. Use of antibiotics in cats- the most common problems 5. Pharmacotherapy in cats (problems with NSAID use in cats, insecticids in cats- piretrins)					
	CLINICAL N	UTRITION	I OF DOGS AN		S (6 hours)	
	1.Evaluation of nutritional status (body condition, laboratory tests) 2.Food evaluation (quantity, different types) 3,Evaluation of feeding 4. Meal correction 5. Dietary management of special diseases 6. Basic principles of feeding in different age phases					
2.6.Format of instruction:	lecturesindependentseminars andassignmentsworkshopsmultimedia andx exercisesthe interneton line in entiretylaboratorypartial e-learningwork with mentorfield work(other)		2.7.Comments:			
2.8.Student responsibilities	Class attend	lance, activ	ve participation	in exer	cise, tests, written exam	
2.9.Screening student work (name	Class attendanc e	18%	Research		Practical training	
the proportion of ECTS credits for each activity so that	Experimen tal work		Report		Active participation in exercise	10%
the total number of ECTS credits is	Essay		Seminar essay		(other)

	exam	40%	Project		(other)	
	minimal 11 p each exercis	as to attend points. The se. A attend indance in index sign	maximal value dance of one h exercise (minii ature.	e is 18 p our of e	(totally 45 hours) to colle points, if a student attend xercise brings 0,4 point b hours) is criterium for	
2.10. Grading and evaluating student work in class and at the final exam	Active participation in exercise is continuously evaluated during 12 practical exercises with grades from 1 to 5. Maximal value is sum of grades during 12 exercises (12×5) 60 and for this maximal value student can collect 10 points. Student must collect minimally sum of 30 to collect 5 points. $10/60 = 0,1667$. Sum of grades must be multiplied with coefficient 0,1667 to calculate final score for active participation in exercise. Student which did not collect minimal sum of grades can not collect index signature and must attend next year subject gain.					
	Tests					
	Student can collect in continuous assessment maximal 32 points. Student must collect minimal 20 points to be able to attend final exam, but not to collect index signature. The continuous assessment test is consisted of 32 questions. One correct answer is one point. Questions are from Pathology (8), Clinical pharmacology (8), Clinical nutrition (8) and Radiology and					

	ultrasound (8). Time of continuous assesment test will be arranged with subject coordinators.				
	Final exam The final exam can get maximally 40 points to student. A written form of exam is consisted of 40 questions (30 Surgery orthopedics and ophthalmology and 10 infectious disease). Each correct answer gets 1 points to student. Student must collect minimal 24 points or 60% of answers from one subject (18 from Surgery orthopedics and ophthalmology and 6 from infectious disease). In the case that student did not collect minimal value from one subject, student will attend next time only to exam from this subject.

2. COUSE DESCRIPT	2. COUSE DESCRIPTION					
2.1.Course objectives Subject is offered as elective in tenth semester involved in specialized education in track "Farm animals and horses". The content is presented to students mainly in the form of seminars and exercises and is supplementation to completed fundamental preclinical and general clinical education. Practical exercises are held on clinical patients and on the stud farms. Students are trained to diagnose and treat the most common						

	problems and diseases in horses. This course qualifies involved students
	with competent knowledge in the field of equine medicine.
2.2. Course enrolment requirements and entry competences required for the course	Enrolled tenth semester.
2.3. Learning outcomes at the level of the programme to which the course contributes	The course contributes to higher competences in the field of equine medicine, continuing education and extended program of integrated undergraduate and graduate board of reproduction and breeding management, internal diseases, surgery, orthopaedics and ophthalmology, of diagnostic imaging, infectious diseases, equine veterinary pathology, nutrition and dietetics, clinical pharmacology and toxicology and parasitology. This course presents an important part in the education of a new generation of students since they will obtain knowledge and skills in equine medicine on a more elaborate level than so far.
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	REPRODUCTION AND OBSTETRICS Monitoring of follicular dynamics in mares by ultrasound examination, hormonal examination and getting know with hormonal references during cycle of mare. Optimal time of mating and insemination in mare. Artificial insemination of mares with fresh, chilled diluted and frozen semen, different regimes (treatments) for applications of hormonal preparations (light and progestagen treatments, prostanglandins in oestrus cycle, use of GnRH, hCG) - advantages and disadvantages; Endometrium evaluation (cytology, bacteriology, biopsy). Swabbing technique and evaluation of cytological result, sending and analysing method followed by EU conditions, endoscopic examination of uterus. Specifics of Andrology examination in stallions, special spermiology, collection and evaluation of stallion semen. Early ultrasound and laboratory diagnosis of pregnancy, monitoring of fetal development using Doppler, diagnostics and reduction of twins, diagnosis and monitoring of high-risk pregnancy; Irregularities in the structure of the sexual organs (congenital and acquired). Embryonic loss, abortions, twin pregnancy, endometritis and endometriosis, functional disorders of ovarian function and ovulation; Vitality foal determination at birth (APGAR), intensive care of new-borns, foal watch and nursing of orphaned foals, procedures and treatment of new-borns with weak vitality, procedures and treatment of new-borns with expand their knowledge in gastrointestinal diseases (endoscopic approach, colics, colitis X, ulceration of the digestive tract), respiratory diseases. Diseases of cardiovascular system, diseases of blo

intravenous and local anaesthesia in the field conditions. Emphasis will be put on diagnosis, surgical decision and preoperative management approach to urgent equine colics discomfort. Students will learn how to asses pain in horses and how to choose an appropriate analgesia protocol during postoperative care. Students will be able to perform postoperative care and recognise complications after colic surgery. In purpose of performing lameness diagnostics, it is essential to gain knowledge of clinical examination of the lame horse, diagnostic analgesia, and special methods of lameness diagnostics (ultrasound, CT, MR, arthroscopy, tenoscopy, nuclear scintigraphy and kinetic and kinematic analysis). Also, the students will master pathogenesis, diagnostics and treatment of soft tissues, joint and bone lesions of the limbs and axial
skeleton in sport horses. In the ophthalmology course students will be acquired with the most common eye diseases, ocular examination techniques and treatments. In equine dentistry students will be acquired with principles of examination of the oral cavity, performing prophylactic teeth floating procedures in the
field condition and treatment of basic pathological diseases in the oral cavity. INFECTIOUS DESEASES
During the practical work students will learn how to obtain the most suitable clinical samples required for objective diagnostic procedures of infectious diseases of horses. Furthermore, they will be provided with information about referral diagnostic methods and referral laboratories for particular infectious disease of the horses. The acquired knowledge will prepare students for correct interpretations of the diagnostics tests results and knowledge about general prophylaxis will give to them sustained knowledge
for implementation of control measures in prevention of infectious diseases. Finishing the course students will be also able to make appropriate immunization schedules for horses. RADIOLOGY AND ULTRASOUND During practical work students will be trained for independent radiography
of the extremities in horses and setting radiographic diagnosis. PARASITOGY
Students are introduced to the development, morphology and determination of internal parasites as an etiological factor in the development of clinical signs in the most common invasive diseases of horses. They are also trained to perform a parasitological examination and determine the most common horse parasites in which prevention and treatment are an integral part of animal health care. In those invasive diseases for which diagnosis is
possible in a specialized laboratory, they are able to properly take the material after the suspicion and deliver it to a specialized laboratory with all the necessary information. PATHOLOGY – SELECTED CHAPTERS
Students will expand their knowledge of the horse necropsy technique and recognition of pathological changes in diseases that are relatively common in horses and foals. CLINICAL PHARMACOLOGY
During the conservatorium students will be introduced to the typical diseases of this noble species of animals and the possibility of their treatment. CLINICAL TOXICOLOGY
Students will be able to recognize poisoning, approach the treatment of poisoned animals, assess the success of treatment and to sample material for diagnostic tests in an appropriate manner, primarily for toxicological analysis.

	NUTRITION AND DIETETICS IN HORSES
	Introducing future veterinarians with feeding as an important factor in
	preventing the emergence of a significant number of diseases and as a
	possible additional therapy in the treatment of the sick horses.
	OBSTETRICS AND REPRODUCTION
	1. Breeding management of mares: Oestrus and its detection,
	Endocrinology of the equine oestrous cycle. Monitoring of follicular dynamic
	in the mare with ultrasound examination. Optimal timing of mating and
	insemination in mare. 2. Assesment of mare fertility,. Contagious equine
	metritis: Recommendations for disease prevention and control during the
	breeding season. Examination and swabbing mares and stallions for CEM
	3. Assessment of stallion fertility and breeding activity. Collecting and
	evaluating stallion semen. 3. Artificial insemination in mares with diluted,
	chilled and frozen semen: timing and techniques. 4. Management of the
	postpartum mare 5. Gynaecological surgery in mares 6. Pregnancy
	diagnosis - early ultrasound examination and resolving problems during
	pregnancy 7. Infertility in mares: embryonic loss, twin pregnancy,
	endometritis and endometriosis, ovulation failures 8. Neonatal care 9. Foal
	illnesses.
	SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY
	1. The first aid approach to to equine trauma; 2. Application of sedation,
	general intravenous and local anaesthetics in field conditions: 3. Acute
	abdomen (diagnsis, surgical decision, preoperative management); 4.
	Postoperative care and complications related to abdominal surgery; 5.
	Application of manipulative tests and diagnostics analgesia in lameness
	diagnostic: 6. The most common diseases and treatment of equine limbs 7.
	Treatment of soft tissues diseases: tendons, ligaments, bursae; 8. The
2.5. Course content	basic principles in treatment of palpebral and corneal injuries and inflammation of the uveal tract 9. The basic of equine dentistry and dental
broken down in	prophylaxis.
detail by weekly	INTERNAL MEDICINE
class schedule	1. Gastrointestinal diseases (gastrointestinal endoscopy; diagnostic and
(syllabus)	therapeutic approach to equine colic, colitis X; gastric and duodenal ulcers
	in horses and foals). 2. Respiratory diseases (tracheal aspirate-indications,
	techniques and interpretation; bronchoalveolar lavage; obstructive
	pulmonary disease; exercise induced pulmonary hemorrhage;
	bronchodilatators and corticosteroids in aerosol form; immunomodulators in
	respiratory diseases therapy). 3. Diseases of cardiovascular system
	(arrhythmias; congenital cardiac defects; valvular diseases; endocarditis;
	pericarditis). 4. Diseases of blood and blood forming organs (anemia;
	polycythemia; thrombocytopenia; hemostasis; vasculitis; lymphoproliferative
	and myeloproliferative diseases). 5. Urological diseases (urolithiasis). 6.
	Dermatological diseases. 7. Neurological diseases (painful back, vestibular
	•
	 syndrome). INFECTIOUS DISEASES 1. Review of the incidence of infectious diseases of horses and making of differential diagnosis based on epizootiological data and clinical symptoms; 2. Procedures in of horse infectious diseases diagnostics – sampling of adequate diagnostic material for microbiological, molecular and immunological diagnostic methods; 3. Treatment of infectious diseases of the horses; 4. General prophylaxis of infectious diseases of the horses - immunization schedules. RADIOLOGY AND ULTRASOUND 1. The procedures of radiological and ultrasound diagnosis. Diagnosis of pathological conditions of the distal phalanx. 2. Diagnosis of navicular

1.4.Study programme (undergraduate, graduate, integrated)	intergrated	1.9.Expected enrolment in the course			
1.5.Status of the course	obligatory	1.10.Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIPTION	-		•		
2.1.Course objectives	In addition to the general aim and tasks, the education of future doctors of veterinary medicine has a special aim. It is the task of lecturers to teach the students how to perform independently all expert activities, and to apply the scientifically verified standards of hygiene and technology within the frameworks of the veterinary inspection and evaluation of food safety and quality. Of course, this is possible only by means of education in the field of application of process methods (technology) in the production of food products of high quality and hygiene standards, all in the context of improvement of veterinary public health.				
2.2.Course enrolment requirements and entry competences required for the course	A condition for attending the course: attended and passed all couses in the first three years of study. Attended all courses from the fourth year of study and passed exams in the subject: Internal Medicine (VII semester) and Game management and breeding (VII semester).				
2.3.Learning outcomes at the level of the programme to which the course contributes	Course Food Hygiene and Technology is an important segment of veterinary public health, which allows students to engage with the acquired knowledge in tasks and activities of veterinarians in the area of food inspection, official controls and systematic monitoring of the safety of food of animal origin. Students are trained to carry out veterinary inspections and controls of food, from its production, processing and transport.				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	processing and transport. By the completion of the course students should be able to: - explain the structure, purpose and methods of veterinary inspection, control and monitoring of production, processing and distribution of food of animal origin - identify hazards and risks in the production and distribution of food of animal origin - interpret the results of food quality assessment and food safety - distinguish the type of food according to the production process - define acceptability factors of food for human consumption - incorporate legislation in the preparation and analysis reports in the field of hygiene and technology of food of animal origin				

FOOD HYGIENE AND TECHNOLOGY

	avaluate production bygione precedures in the facility and process
	- evaluate production hygiene procedures in the facility and process control indicators
2.5.Course content broken down in detail by weekly class schedule (syllabus)	 Lectures: I. Introduction; Food hygiene and veterinary public health. 2. Slaughter processing. 3. Animal welfare in slaughterhouses. 4. Meat biochemistry and meat conditions. 5. Risk based meat inspection (MSAS). 6. Biological hazards - foodborne microorganisms and parasites. Alimentary infections and intoxications. 7. Biological hazards - sampling and analyses, standards, assessment. 8. Chemical-toxicological hazards in food chain. 9. Chemical-toxicological hazards in food chain – sampling and analyses, standards, assessment. 10. Prerequisite programmes. 11. HACCP. Official controls. 13. Meat quality and meat preservation. 14. Additives. 15. Carcass grading and meat processing. 16. Thermally processed meat products. 17. Thermally non-processed meat products. 18. Food fraud. 19. Milk and dairy products (trends in milk production, udder health, milking, legislation, controls). 20. Veterinary controls in milk production (hygiene, dairy microbiology and zoonoses, mastitis, quality and health requirements). 21. Chemical composition of milk (sensory and physico-chemical properties of milk, types of milk, nutritional value of milk and dairy products (transport, processing). Heat treatment and microbiological risks. 23. Hygiene and technology of production of dairy products (transport, processing). Heat treatment and microbiological risks. 23. Hygiene and technology of production and packing of milk and dairy products. Additives. 25. Hygiene and technology of cheese production. HACCP in milk production. 26. Veterinary inspection of fish. Quality and freshness assesment of fish, crabs and shellfish. Strunning of fish. Parasitic invasion in fish. Patogenic microorganisms. 27. Composition and quality of fish, crabs and shellfish. Strunning of fish, crabs and shellfish. Strunning of fish, crabs and shellfish. Strunning of fish. Parasistic invasion in fish.
	 Water holding capacity, Meat pigments Meat freshness assessment Microbiological examination of food. Interpretation of results. Microbiological cleanliness of surfaces.
	- Determination of pork fat quality - Antimicrobial resistance of food bacteria

	 Additives and spices. Sensorial, chemical and microbiological analysis of meat products Milk freshness and fat content Density of milk. Milk adulteration Hygienic quality of milk Sensorial, chemical and microbiological analysis of dairy products Eggs Fish and fish products HACCP Microbiological standards Field work at pig, cattle and poultry slaughterhouse Field work at meat, milk and egg processing facilities

1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9.Expected enrolment in the course	At least 50% of lectures and 67% of exercises
1.5.Status of the course	Compulsory	1.10.Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	
2. COUSE DESCRIPTION			
2.1.Course objectives	Study of Infectious diseases of domestic animals includes perception of occurrence, spreading and eradication of infectious diseases, diagnostics and application of measures and procedures in prophylaxis of infectious diseases in order to eradicate them. Cognition on natural focus of infectious diseases, infection containers and causative agents of zoonoses are particularly important in animal health maintenance as well as for lives of stock breeders and veterinarians working with animals. Students are to gain practical knowledge on diagnostics of infectious diseases occurred at one or more animal species by epizootiological, clinical, microbiological, serological, pathalogicoanatomical and therapeutic method, as well as by biological experiment. In that way attendants are enabled to be single-handed in practice and to comprehend all the procedures taken elsewhere as support in objective diagnostics. In case of infection it is important for a veterinarian to be competent in using the right procedure while taking the samples for diagnostics and to use the statutory prophylactic measures.		
2.2.Course enrolment requirements and entry			

competences required for the course	Attended and passed all courses from 1 st , 2 nd and 3 rd year of study; attended all courses from 4 th year of study			
2.3.Learning outcomes at the level of the programme to which the course contributes	The course Infectious diseases of domestic animals will give understanding of infectious disease outbreaks, transmission and control, diagnostics and preventive and control measures. Emphasis will be given to natural focal infectious diseases, reservoirs and zoonotic pathogens in order to preserve animal health, as well as health of farmers and veterinarians. Students should acquire knowledge and practical skills in diagnostics of infectious diseases of animals only using epizootiological, clinical, microbiological, serological, pathological and therapeutic methods, as well as biological experiments.			
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	therapeutic methods, as well as biological experiments. After successful overcoming of course student will be able to: - recognize factors which are conditioning infection, spreading and completion of infectious disease - diagnose infectious disease or to declare suspicion to infection - select the most appropriate samples and sampling for objective diagnosis of infectious disease - understand and evaluate laboratory test results - select further procedure with infected animal/s - perform etiologic treatment - perform legislation measures for control/eradication of infectious disease - recommend and install control and prevention measures for infectious diseases which are not regulated by the law			
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Curse content IX semester Hours Lecture topics 2 Introduction to epizotoilogy 2 Infection, Macro-organism defence mechanisms, Development of active immunity 2 Source of infection 2 Routes for spread of infectious diseases, Port of entry for pathogens 2 Susceptibility to infection 2 Prevention of infectious diseases 2 Immunoprofilaxis 2 Classification of infectious diseases; Stages of an acute infectious disease 2 Canine viral and bacterial gastroenteritidies I 2 Feline immunodeficiency virus infection, Feline leukaemia virus infection, Feline infectious peritonitis 2 Feline parvovirus infection, Feline respiratory disease, Feline infectious anaemia 2 Canine distemper, Infectious canine hepatitis, Canine infectious respiratory disease, Canine herpesvirus infection

1.4.Study programme (undergraduate, graduate, integrated)	Integrated Undergraduate and Graduate University Study of Veterinary Medicine in English	1.9.Expected enrolment in the course	25				
1.5.Status of the course	Compulsory	1.10.Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	-				
2. COUSE DESCRIPTIO	N						
2.1.Course objectives	within the course framework, the students will get acquainted in detail with the pathology of pregnancy and parturition, with causes, clinical picture, diagnostics and therapeutic approach of infertility in domestic animals. Students will also be thoroughly familiarized with pathology of mammary gland in companion animals, principles of contraception, including pregnancy termination, causes, diagnosis and therapy of common diseases of the new-born animals and basic principles of assisted reproduction methods.						
2.2.Course enrolment requirements and entry competences required for the course	Students are required to have pending completion of the course of Obstetrics and Reproduction 1 as an enrolment requirement. As the entry competences they should be able to take the animal's gynaecologic history, perform a gynaecological clinical examination and recognize clinical signs of reproductive cycle, pregnancy, parturition and puerperium. Also to perform a clinical examination of the mammary gland and apply basic principles of clinical examination of males and laboratory semen tests.						
2.3.Learning outcomes at the level of the	-						

OBSTETRICS AND REPRODUCTION II

programme to which						
the course contributes						
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	to explain the irregular ovarian function in domestic animals; to relate the impact of feeding and keeping animals on their reproduction; to use knowledge about inflammatory conditions of uterus and its diagnostics; to check parturient animal and define the pathology of parturition status, propose the proper obstetrical method and/or gynaecological surgery as a method of proper therapeutic approach. to diagnose congenital and acquired abnormalities of the reproductive organs that could cause infertility; to independently choose a method of assisting the difficult parturition; to understand the approach to pregnancy termination.					
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Obstetrics and treatment of dystocia in domestic animals, Infertility in bovine, Infertility in mares, Infertility in sheep and goats, Infertility in swine, Infertility in dogs and cats, Neoplasia of mammary glands, Contraception and pregnancy termination, Pseudopregnancy of bitches and queens, Fibroadenomatous hypertrophy of queens, Veterinary neonatology, Assisted reproduction in veterinary medicine.

2.10. Grading and evaluating student work in class and at the final exam	By attending lectures the student gains 3-6 points (30 lecture hours; each lecture hour equals 0.1 coefficient). Students must attend at least 15 lecture hours. By attending practicals the student gains 8-12 points (45 hours of practicals; each practicals hour equals 0.11 coefficient). Students must attend at least 30 hours of practicals. The activity at the practicals is evaluated with 5-10 points; the activity will be evaluated through short oral exams and practical assignments. There will be a progress test performed during the semester consisting of 10 questions and performed in written form. The progress test brings 32 points (each question equals 3.2 points), 20 points being the minimum					

	required to pass. Taking the progress test during the main term is compulsory (missing the main term needs to be justified). 3 additional progress test terms will be announced, as per agreement with students. A passing grade for the progress test is a requirement in order to register for the final exam. However, the progress test is not a requirement for a signature in the grade book. If the student fails the progress test 4 times, he/she needs to take the whole course over again. In case he/she doesn't take the progress test or fails it 4 times, an additional term is possible if the student representative writes an official request to the respective Vice Dean. The Course leader makes the final decision. In order to take the final exam, a student must gain a minimum of 16 points by attending lectures and practicals and through activities during practicals, and at least 20 points from continuous knowledge assessments.						
	The final exam consists of 10 oral q points (a minimum of 24 points to pa from the above-mentioned elements 1 being a fail.	ss). The total s is expressed in	sum of poir n the final r	nts achieved

2. COUSE DESCRIP	TION				
2.1.Course objectives 2.2.Course enrolment requirements and entry competences required for the	Course ctivesThe course goals are to introduce basics of small and large animal orthopaedics and basics of small animal neurosurgery in order to prepare students for diagnostic procedures and treatment.Course olment uirements and y competencesUpon gaining of provided skills and knowledge a student is capable of orthopaedics diseases of large animals with enrolment in treatment of toes and hooves diseases.				
2.3.Learning outcomes at the level of the programme to which the course contributes	In the 9 th semester students broaden their knowledge and skills gained in the 7 th and the 8 th semester in order to improve their competences.				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Student can recognise diseases of muscles, tendons and ligaments, and determine the basic treatment. The student is acquainted with the diseases of joints, basics of their treatment and indication for referring patients to a referral clinic. He/she is acquainted with diagnostics and basic ways of treatment the fractures in small animals. The student is trained to give the first aid to a				

	patient, immobilize the fracture and recommend other options of treatment. The students are acquainted with the diagnostic and basic treatment of lameness, diseases of muscles, tendons and tendon sheaths in large animals. He/she is able to recognise paralyses and paresis in pets and large animals and estimate indication for referring patients to a referral clinic. The student is acquainted with diagnostics of hoof and toes diseases in large animals and is trained to treat simple cases and indicate possible need to refer the patient to a referral clinic. He/she is acquainted with the basics of hoof corrections, types of horseshoes and with the basic techniques of toes corrections. The student is trained to perform basic neurological examination, diagnostics of a fracture and luxation of vertebrae and estimate the indication for referring the patients to a referral clinic. The student is trained to diagnose diseases of intervertebral					
	-				column and is able to o I clinic.	estimate
2.5.Course content broken down in detail by weekly class schedule (syllabus)	indication for referring the patents to a referral clinic. Lectures: 1.Orthopaedic examination of small animals 2.Diseases of muscles, tendons and ligaments 3.Diseases of muscles, tendons and ligaments 3.Diseases of lameness in large animals 5.Diagnostics of lameness in large animals 6.Diseases of muscles, tendons and tendon sheaths 7.Paralyses and paresis 8.Diseases of hooves 9.Diseases of hooves 9.Diseases of hooves 10.Types of horseshoes and correction of hooves 11.Correction of toes 12.Neurological examination 13.Fractures and luxation of vertebrae 14.Diseases of intervertebral disc 15. Degenerative diseases of vertebral column Exercises: Practical training – small animal orthopaedic exam Practical training – small animal neurologic exam Practical training – large animal orthopaedic exam Practical training – large animal orthopaedic exam Practical training – correction of hooves Practical training – correction of hooves					
2.6.Format of instruction:	X lectures X seminars and workshops X exercises On line in entirety partial e-learning field work			d 2.7.Comments: Each student has 7 hours of seminar . Thematics will be in the field of recent horse orthopaedics.		
2.8.Student responsibilities			`			
2.9.Screening student work (name the proportion of ECTS credits for each	Class attendance Experimental work Essay	0,94	Research Report Seminar	0.1	Practical training activity	0,5
activity so that the	Essay		essay	0,1	(other)	

total number of	Tests	1,76	Oral	2,2	(other)		
ECTS credits is equal to the ECTS value of the course)	Written exam		Project		(other)		
value of the course	to the ECTS of the course Written exam Project (other) Participating actively at the exercises students can gain 75 points max., v brings them 10 points in final. Points for performing the following tasks: 25 points = keeping records in the book of a patient in an orderly manner 25 points = keeping records of anaesthesiology protocols in an orderly manner 25 points = active participation in the work with patients The number of points students must gain in order to earn minimal 5 poir 37,5. Student's participation at the exercises will be checked continuous! During the semester a student must attend 25 exercise hours (out of tota hours) in order to gain minimal 8 points during the semester. The max number of gained points from this evaluation element is 12. During seme a students will have 7 hours of seminars. Student is obligated to attend 5 h out of 7 hours of seminar and is obligated to present at least one (1) sem essay topics to complete course. During the semester there will be three (3) preliminary exams organised a time of exercises each containing eleven (11) problems or questions. B correctly solved problem or correctly answered question is worth one (1) p A student must gain the total of 21 points from 3 preliminary exams (minin from each preliminary exam) in order to earn minimal 20 points. The max number of points a student can gain from this evaluation element is 32 points						
2.10. Grading and evaluating student work in class and at the final exam	A student who does not gain minimal 21 points during the seme student preliminary exam has a right to take a makeup preliminary exam cov units from all programme exercises. The makeup preliminary exam						
	Before the final exam students will have chance to make up for exercises and the makeup preliminary exam in case of their excused absence. Also student must have at least one presentation of seminar (essay).						
	Minimal conditions for passing the first, second, third and forth evaluation element are summed up and they are worth 36 points all together.						
	The final exam starts with a student's short analysis of results gained from the first four types of activities of attending lecture. Questions in the final exam will be put in a way that a student can answer in written and oral form. In the written form there will be 5 questions (20 points), 3 of which must be answered correctly (12 points) in order to take the oral exam. Every question has 4 subquestions and every right answered subquestion values 1 point. Therefore written exam has 20 points in total (5x4). The maximum number of points that can be gained at the final exam is 40 points, where 4 points = 1 correct answer. The student must show at least a sufficient knowledge at the final exam, with no regard to gained number of points from the first four evaluation elements, which could be higher than 36. The minimal number of points a student must gain at the final exam is 12 (12 points minimal at written as well at oral exam). Minimal number of points on written exam					hal I form. Ist be question oint. mber of s = 1 e at the ur hber of at	

	together with oral exam must be 24 (40 max.) points. If st minimum 12 points on written exam one can not take oral does not gain minimum 12 points in oral exam, one fails. does not satisfy at the final part of the exam, the lecturer re-examination.	l exam. 2. COUSE DESCRIP	-				
2.1.Course objectives	The aim of the course is to get students acquainted with importance of veterinary activities through legal acts of the Republic of Croatia related to the area of animal health protection, implementation of veterinary public health measures, improvement of animal reproduction, veterinary protection of the environment, procedure for testing and placing on the market of veterinary medicinal products and inspection supervision in the veterinary field. Also, to students will be introduced the responsibilities, obligations and duties of natural and legal persons in relation to the protection of animals, including the protection of their life, health and welfare, the manner of handling animals, animal protection requirements (the keeping and raising of animals, when transporting them, using them in experiments, at the time of slaughter or humane killing). After completing this course students will be able to correctly interpreted, used, and finally				
2.2.Course enrolment requirements and entry competences required for the course	implemented law and sub-law regulations in the area of veterinary activity. Attended the course of Infectious Diseases in 11th semester.				
2.3.Learning outcomes at the level of the programme to which the course contributes	 ability to interpret, use, and implement of formal and material legislation of General Administrative Procedure Act, Veterinary Act, Livestock Act, Act on Veterinary Medicinal Products, Food Act, Animal protection Act and subordinate regulations / legislation based on above mentioned 				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 interpret, apply and implement the formal legislation of the area of the General Administrative procedure the Veterinary Act, the Veterinary Medicinal Products Act, the Food Act, the Animal Protection Act and subordinate legislation based on the above and equivalent regulations of secondary legislation of the European Union; know the procedure and manner of issuing the record and decisions in the administrative procedure related to veterinary activities; knowledge of the following procedures in veterinary medicine: veterinary checks and controls on farms, farms, livestock fairs and other facilities issuing animal health certificates, certificates for consignments of products of animal origin and feed; conducting compulsory marking of animals and keeping prescribed records on the identification and registration of animals of the 				

STATE VETERINARY MEDICINE

movement, on the implementation of stipulated measures for the detection, prevention, control and control of infectious or parasitic diseases,
 take diagnostic material from animals, samples of products of animal origin and animal waste matter for the purpose of examining the health status of animals, i.e. the sanitary safety of products of animal origin recognize the suspicion of an infectious or parasitic disease of interest to the Republic of Croatia and the EU; knowledge of the responsibility and obligations of natural and legal persons with regard to animal protection and protection of their health
Lectures (15)
 Introduction to the state veterinary medicine. Main fields of veterinary activities: animal health protection measures, implementation of veterinary public health measures, improvement of animal reproduction, veterinary protection of the environment, control of zoonosis and prevention of the occurrence of listed diseases. Terminology used in veterinary medicine i.e. veterinary activities.
 The legal order - European Union (EU), EU treaties, Fundamental values of the European Union, The institutions of the EU; The legal order of the European Union, The legal sources of Union law (Regulations, Directives, Decisions), The legislative process in the EU; The World Organisation for Animal Health (OIE)
 Current Union legislation on Animal Health; Listed diseases; Animal keepers and Operators, Veterinarians, Competent Authority; Official laboratories; Disease notification and Reporting system; Surveillance
 Eradication programmes Category B and C diseases; Suspicion of certain diseases; Official confirmation of certain diseases; General criteria for the granting of disease-free status
 Disease control measures for category A diseases; Contingency plans and simulation exercises; Use of veterinary medicinal products for disease prevention and control; Disease control measures in the event of suspicion; Disease control measures in the event of official confirmation of an outbreak
 Administrative Procedure; Administrative and inspectional supervision; Veterinary inspector and border veterinary inspector; Authorised veterinarian
 Animal protection; Fundamental provisions on animal protection; Prohibited conduct for the purpose of animal protection; Performing procedures on animals; Protection of animals at the time of killing
 Veterinary activities implementation system; Establishment and removal from the register; Veterinary surgery and veterinary station; Authorised veterinary organisations; Control bodies; Veterinary practice; Veterinary hospital and veterinary clinic; Veterinary pharmacy; Croatian Veterinary Institute; Reporting on veterinary activities; Veterinary staff; Croatian veterinary chamber; Expenditure in the veterinary field
Seminars (30)
 Identification and non-comercial movment of dogs, cats and ferrets
 Identification and registration of bovine animals; Identification and registration of pigs (eartags, animal passports, holding registers) – student presentations
 Identification and registration of ovine and caprine animals; Identification and registration of of equidae (eartags, animal passports, holding registers) student presentations
 Registration of establishments and certain types of operators; Record- keeping obligations; Traceability requirements; Movement of consignments within the Republic of Croatia; Certificate of health condition and place of origin of the animal; Veterinary check of holdings, Veterinary checks of

	 consignments; Movement of consignments within the European union General requirements for movements; Supplementary animal health requirements Introduction of consignments from third countries; Border inspection post Veterinary checks upon introduction; Refusing the introduction of a consignment; Controls on personal consignments; TRACES - Trade Control and Expert System CITES (The Convention on International Trade in Endangered Species o Wild Fauna and Flora)-international trade of protected animal species Disease control measures for category A diseases – student presentations Eradication programmes Category B and C diseases – studen presentations Protection of wild animals; Protection of pet animals; Protection of animals in zoos; Protection of abandoned and lost animal (shelters-establishment activities, animals in shelters) Animal protection during keeping and breeding Animal welfare on the farm – student presentations Animal welfare during transport; Slaughter and stunning- studen 						animal health spection post; duction of a CES - Trade ed Species of l species presentations s – student ion of animals establishment,
2.6.Format of instruction:	 presenta Animals or users animals Veterinary me pharmacovig ☑ lectures 	presentations • Animals used for scientific purposes; Authorisations of breeders, sup or users; Laboratory animals; Conditions for working with experim animals; Experiment – Project Veterinary medicinal products (testing of VMPs, placing of VMPs on the mapharmacovigilance); Medicated feed; Residues of veterinary medicinal products (testing of veter					lers, suppliers experimental on the market, cinal products

2. COUSE DESCRI	PTION						
	INTERNAL DISEASES						
	procedures and interpret to diagnose most common and cats, and to recog treatment. Knowledge a capable to work in institu- and cats. Acquired know	ating clinical and laborate on diseases from the area nize disease states that and skills gained at this utions that are dedicated t	apable of conducting clinical bry data, which enables them a of internal medicine of dogs demand further specialistic course will make students to maintaining health of dogs basis for further specialistic				
	OBSTETRICS						
	After completing this course, the students will be capable to diagnose and tree gynecological diseases of dogs and cats. Furthermore, they will be capable perform common gynecological surgical procedures. Knowledge and sk gained at this course will make students capable to work in institutions that a dedicated to maintaining health of dogs and cats. Acquired knowledge sufficient to enable further education through specialistic or doctor education						
2.1 Course objectives	PARASITIC DISEASES						
	After completing this course, students will be well acquainted with diagnost and determination of endo- and ectoparasites, as well as the algorithm diagnostic procedures. The students will be capable of perform parasitological examination and determine the most common parasites of d and cats which can produce clinical illness in dogs and cats, but in humans well. They will be able to construct prevention schemes and procedures. W the diagnostic of parasitic diseases demands expert laboratory or procedur the students will be capable to adequately sample necessary material a prepare required documentation for these tests.						
	CLINICAL TOXICOLOGY						
	After completing this course, the student will be able to recognize poisoning, to apply nonspecific as well as specific treatment of the poisoned patient, adequately sample material for further toxicologic diagnostics, and correctly asses the success of treatment.						
2.2 Course enrolment requirements and entry competences	Listening requirement: Passed the course Diseases and Treatment of dogs and cats I. Passed exam: Obstetrics and Reproduction II. Requirement for taking the exam: Passed exam: Diseases and Treatment of dogs and cats I.						

required for the course	
2.3 Learning outcomes at the level of the program to which the course contributes	Improved level of knowledge of less known diseases and improved diagnostic and therapeutic procedures as well as differential diagnostics in the area of small animal internal diseases, parasitology, obstetrics and toxicology.
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Students will be able to differentiate between larger number of internal diseases and acquire larger therapeutic capabilities from the area of internal medicine Students shall improve differential diagnostics of less common gynecological disease and be able to perform routine surgical interventions in area of gynecology of dogs and cats Students will be able to recognize and treat toxicological diseases of dogs and cats Students will be able to recognize and treat parasitic diseases of dogs and cats
2.5 Course content broken down in detail by weekly class schedule (syllabus)	Internal diseases: 26 hours: gastroenterology 3 hours, respiratory diseases 2 hours, oncology 3 hours, nephrology 3 hours, neurology 3 hours, emergency and critical care 3 hours, cardiology 3 hours, dermatology 3 hours, endocrinology 3 hours. Obstetrics: 6 hours: examination and gynecologic propaedeutics 2 hours and gynecologic operations 4 hours. Toxicology: 5 hours: interactive work-up of clinical cases of poisoning. Parasitology: 8 hours: interactive work-up of parasitological clinical cases with differential diagnostics of parasitic diseases and therapy. INTERNAL DISEASES 1. Propedeutics of dogs and cats: sampling, diagnostic procedures, therapeutic procedures; 2. Clinical laboratory diagnostics: interpretation of haematological blood results, interpretation of biochemical blood results, cavity effusions; 3. Emergency veterinary medicine and intensive care: triage and ABC resuscitation, shock, access to a dyspneic patient, acute abdomen, monitoring of critical and intensive patients; 4. Cardiology: principles of diagnosis of heart disease, diseases of the heart valves, cardiomyopathy, arrhythmia; 5. Respiratory diseases: respiratory obstruction syndrome in brachycephalic breeds, tracheal collapse, chronic bronchitis in dogs, chronic bronchitis/asthma in cats, laryngeal paralysis; 6. Gastroenterology: principles of diagnosis of diseases of the digestive system, principles of therapy of diseases, of the digestive system, acute pancreatitis, inflammatory intestinal diseases; 8. Urinary tract diseases: diagnosis of urinary tract diseases, acute renal failure, chronic renal failure, obstruction of the urethra; 9. Neurology: principles of diagnosis of neurological diseases, epilepsy, vestibular syndrome; 10. Endocrinology: hyperadrenocorticism, hypoadrenocorticism, hypothyroidism, diabetes mellitus; 11. Oncology: Principles of diagnosis of neoplastic diseases, principles of cytostatic therapy and cytostatic protocols for the most common neoplastic diseases, paraneoplastic syndrome, lymphoma.
	OBSTETRICS

	1. Reproduction and obstetrics propedeutics (vaginoscopy, endoscopic vaginoscopy, vaginal cytology); 2. Obstetric surgery (ovaryectomy, ovaryhysterectomy, cesarean section).					
	PARASITOLOGY					
	1. Most common parasites of the gastrointestinal tract of dogs and cats – taking samples, of fecal examination, parasite determination and treatment (isosporosis, giardiosis, toxocarosis, ancylostomosis, trichurosis, dipilidiosis, teniosis); 2. Preparing and sending the samples to laboratory for analysis; 3. Dehelmintization program in cubs; 4. Dehelmintization of adult animals; 5. Blood and tissue parasites – dirofilariosis, babesiosis (taking samples, parasitological diagnostics, treatment, prevention, vector control); 6. Leishmaniosis (clinical treatment, taking and sending samples to laboratory for analysis, treatment, prevention, vector control); 7. Ectoparasites as agents of pruritus and/or dermatitis (lice, fleas, <i>Notoedres</i> -mange, <i>Sarcoptes</i> -mange, demodicosis, <i>Otodectes cynotis</i> , cheyletiellosis); 8. Clinical treatment, parasitological examination of the skin and ear canal, determination of parasites; 9. Treatment and prevention.					
	CLINICAL TOXICOLOGY 1.Clinical toxicology and your first case; 2. Clinical cases of poisoning of do and cats (case reports – PowerPoint presentations in the form of conversatories) with pesticides (organophosphate compounds, carbamates anticoagulants, dipyridyls, pyrethrins and pyrethroids, metaldehyde); 3. Clir					
	cases of poisoning of dogs and cats with heavy metals (lead, zinc); 4. Clinica cases of poisoning of dogs and cats with ethylene glycol (antifreeze), sodium chloride; 5. Clinical case reports (PowerPoint conversatory presentations): poisonous snakes and stings from Hymenoptera.

2. COUSE DESCRIPTION	L	(110.2070)	
	INTERNAL DISEASES		
	After attending this course, the candidate acquires skills and knowledge enables him/her to employ clinical methods and interpret clinical laboratory findings necessary for getting an accurate diagnosis of r frequently occurring internal diseases in farm animals. Likewise, candidate should also be able to recognize conditions that require fur specialist attention. Knowledge and skills acquired by attending this con make the candidate qualified for work in institutions dealing with he preservation in farm animals. Acquired knowledge is also considered a g foundation for taking further continuing education in specialist discipline		
	SURGERY, ORTHOPEDICS AN	ID OPHTHALMOLO	DGY
2.10.Course objectives	Surgery, orthopedics and ophthalmology within this educational cour comprises diagnostic procedures and treatment methods which are carr out in specific farm conditions, at the same time bringing into acco- feasibility of those procedures as well as economic consideration Considering that, farm animals are rarely treated in conditions provided Clinic for surgery, orthopedics and ophthalmology, one of our primary go is to familiarize students with methods of diagnostics and treatment that the be employed in field and farm conditions. Some of elective procedur especially those carried out in general anesthesia, will be demonstrated working conditions at Surgery, Orthopedic and Ophthalmology Clin Students will be able to approach to farm animals in field conditions protecting their own health at the same time, and to act in a manner to would provide beneficial effect on health of their patients. Consider numerous risks associated with performing, general anesthesia in fi conditions (especially in ruminants), the students will master methods sedation and all forms of local anesthesia. Basics of diagnostic procedur		his educational course thods which are carried bringing into account onomic considerations. conditions provided by one of our primary goals and treatment that can of elective procedures, will be demonstrated in Ophthalmology Clinic. s in field conditions by to act in a manner that r patients. Considering eral anesthesia in field will master methods of

in ophthalmology and orthopedics that could be employed in field conditions will also be presented to those attending this course, and students will be able to correctly assess the situation and bring the decision about feasible treatment. With previously acquired knowledge in internal diseases of the digestive tract, students will be qualified to correctly decide about selecting the right method and performing surgical treatment in abdominal cavity of farm animals. In addition, students will gain a special set of skills and knowledge needed for managing external and internal injuries, as well as to treat lesions acquired secondary to localized infections. Finally, it is very important for the students to acquire knowledge that makes them qualified to perform various elective surgical procedures that are not directly associated with pathological conditions, and yet are of considerable economic importance and should be specifically performed by doctor of veterinary medicine.

OBSTETRICS

During this course, the students will be familiarized with specific features of mammary gland and lactation in certain domestic animals. They will be also familiarized with basics of farming management in swine reproduction. This includes indicators of breeding efficiency of sows, puberty in gilts and boars, as well as their introduction to reproduction. The students will be gualified to perform artificial insemination in swine without supervision, and will be familiarized with providing care to suckling pigs until they are weaned. Furthermore, the objective of this course is to familiarize students with disorders in swine reproduction and measures that should be employed for their prevention and control. Students of this thematic unit will be taught about basic technics and methods employed during artificial insemination procedure. Practical classes will be held on phantom dummy, where students will be in opportunity to apply their theoretical knowledge. During attending this course, students will be familiarized with basic diagnostic tools for early pregnancy diagnosis and procedures employed for infertility treatment (estrus synchronization, treatment of ovarian cysts and other conditions causing infertility). Students will also be familiarized with physiology and pathology during puerperium in cattle, and will be trained for handling puerperal period without supervision.

INFECTIOUS DISEASES

Students will have the opportunity to expand their regularly acquired knowledge about differential and objective diagnosis of infectious diseases in cattle. They will acquire knowledge that makes them gualified for interpretation of laboratory findings required for objective diagnosis of infectious diseases in cattle by methods officially dictated by legislations of Republic of Croatia. Students will also be informed about possibilities of conducting general prophylaxis and immunoprophylaxis in cattle held in intensive farming conditions. Students will have the opportunity to expand their regularly acquired knowledge about differential and objective diagnosis of infectious diseases in sheep and goats. They will acquire knowledge that makes them qualified for interpretation of laboratory findings required for objective diagnosis of infectious diseases in sheep and goats by methods officially dictated by legislations of Republic of Croatia. Students will also be informed about possibilities of conducting general prophylaxis and immunoprophylaxis in sheep and goats held in intensive farming conditions. Students will have the opportunity to expand their regularly acquired knowledge about differential and objective diagnosis of infectious diseases in swine. They will acquire knowledge that makes them qualified for

interpretation of laboratory findings required for objective diagnosis of infectious diseases in swine by methods officially dictated by legislations of Republic of Croatia. Students will also be informed about possibilities of conducting general prophylaxis and immunoprophylaxis in swine held in intensive farming conditions.
RADIOLOGY AND ULTRASOUND
Students will be trained to correctly perform radiologic examination of foot regions and to interpret findings in most frequently occurring pathological changes.
PARASITOLOGY
Following completion of this course, students should be able to take a sample of feces in a correct manner and to examine the specimen for the presence of parasitic developmental stages. They would be also able to perform skin inspection and to correctly take a sample for examination, as well as to master technics of various forms of antiparasitic therapy.
SELECTED CHAPTERS IN PATHOLOGY
By practical approach, students will be more closely familiarized with issues in performing necropsy in farm animals. In this way the students will be familiarized with pathomorphological changes that are associated with significant and more frequently occurring diseases in cattle, swine, sheep and goats and will be instructed how to differentiate one disease from another, as well as which tissues should be sampled and then sent for additional diagnostic tests in order to reach the final diagnosis. Special emphasis will be placed on pathomorphological changes and differential diagnosis in ruminants, considering that students during their regular classes in "General pathology and pathological morphology" usually have lesser number of necropsies performed on ruminants then those performed on swine.
POULTRY
Acquiring knowledge about the ways of production in all production categories of poultry, with main objective to preserve health within the population.
FARM ANIMAL WELFARE
Students will acquire knowledge about proper treatment of animals in production, which is considered very important in ensuring animal welfare.
ANIMAL NUTRITION
Students will acquire knowledge of preventing nutritional errors, which are often cause of metabolic diseases, and learn about characteristics of nutritional therapy in farm animals.
PHARMACOLOGY
At the very end of their formal higher education, students will have mastered the treatment of certain diseases of farm animals, especially because they will be able to see things in whole after everything they had been taught during the study. Special emphasis will be placed on how to properly dose drugs in group therapy by applying them in food and water for treatment and

	prevention of frequently occurring diseases in certain species of farm animals.
	TOXICOLOGY
	By acquired knowledge students will be qualified to recognize poisoning, to treat affected animal, be able to assess results of the treatment, and to properly sample material required for diagnostic tests, primarily for toxicological analysis. Moreover, students will be able to estimate possible losses caused by animal poisoning and to evaluate the results of chemical and toxicological analyses in case of presence of toxic residues ("Book of regulations").
2.2.Course enrolment requirements and entry competences required for the course	Students should be able to take the animal's history, restrain it in a safe way and perform a general clinical examination. The student should be able to propose diagnostic examinations and understand the principles of the therapeutic approach which could be performed on the farm animals patients.
2.3 Learning outcomes at the level of the programme to which the course contributes	Mastering the concepts in diagnosis and treatment of diseases of farm animals.
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Independently perform all diagnostic and therapeutic procedures that include diseases of farm animals. Taking material for all types of laboratory tests. Perform all maternity procedures that can be performed well in the conditions of fieldwork (e.g. Mastitis Test, review the sterility, assisting in parturition, cesarean section). Perform all surgical procedures adapted to conditions of fieldwork (e.g. diagnosis of lameness, castration of male patients, puncture of fluctuating swellings, enterotomy, gastrostomy, laparoruminotomy, abomase displacement surgery, hoof correction). Mastering pharmacodynamics clinical aspects, diagnosis and treatment of parasitic diseases of farm animals, diagnosis and treatment of poultry kept in farm conditions, zoohygiene farm animals, important aspects of the dissection of farm animals, farm animal toxicology.
	INTERNAL DISEASES
2.5 Course content broken down in detail by weekly class schedule (syllabus)	Organic diseases. 1. Digestive tract diseases (acid indigestion, alkaline indigestion, abomasum dislocation, acute ruminal tympany, traumatic indigestion, oesophago-gastric ulceration in swine, abomasum ulceration, altered positions of the intestines; bowel obstruction, peritonitis); 2. Diseases of the respiratory tract (hyperemia and pulmonary edema, pneumonia); 3. Cardiovascular diseases (endocarditis, pericarditis); 4. Diseases of the hematopoietic system (anemia, leukemia, leukopenia); 5. Urinary tract diseases (cystitis, renal failure/insufficiency, pyelonephritis); 6. Nervous system disorders (differential diagnostics); 7. Diseases of the integumentary system (skin diseases in ruminants and swine)
	Metabolic diseases. 8. Metabolic profile blood work 9. Ketosis and lipoidosis, 10. Diseases associated with vitamin and trace mineral deficiency; 11. Osteodystrophy and tetany; 12. Medical management at the farm (measures for disease prevention, monitoring to establish prevalence of various problems and disorders on the farm, making vaccination and disease treatment protocol)
	SURGERY, ORTHOPEDICS AND OPHTHALMOLOGY
	1. Approaching to farm animals, methods for distraction and restraint; 2. Applying sedation and local regional, infiltration and superficial anesthesia in farm animals within medical facility, and especially in field conditions. 3.

Ophthalmological examination in farm animals; 4. Preforming certain procedures in abdominal surgery on farm animals (herniotomy, laparoruminotomy following Weingarth, laparoruminotomy following Goetz, surgical treatment of abomasum dislocation, castration by employing bloodless and surgical method); 5. Management of external and internal injuries and consequences of localized infections on available animals; 6. Lameness diagnostics in farm animals; 7. Functional hoof correction in small and large ruminants; 8. Diseases of cattle horns and decornuation; 9. Procedures of economic value performed in swine (tail docking and teeth clipping in piglets).
OBSTETRICS
1. Diseases of the mammary gland (specific features of mammary gland and lactation in specific farm animals, with special emphasis on small ruminants in farm breeding); 2. Management of swine reproduction; 3. Artificial insemination (techniques of artificial insemination and measures for its successful employment in field conditions); 4. Fertility management in dairy cows (measures for improvement of fertility in farm conditions, early diagnosis of pregnancy by rectal palpation and ultrasound examination, infertility treatment, estrus synchronization, treatment of ovarian cysts and endometritis along with other conditions causing infertility). 5. Puerperal period and introduction of young females to reproduction
INFECTIOUS DISEASES
1. Infectious diseases of cattle in intensive farming (diagnostics and differential diagnostics of cattle infectious diseases in intensive production, measures performed for general and specific immunoprophylaxis, for infectious diseases, for cattle in intensive production). 2. Infectious diseases of goats and sheep in intensive farming, measures performed for general and specific immunoprophylaxis for infectious diseases in goats and sheep in intensive farming, measures performed for general and specific immunoprophylaxis for infectious diseases of swine in intensive farming, measures performed for general and specific immunoprophylaxis for infectious diseases of swine in intensive farming, measures performed for general and specific immunoprophylaxis for infectious diseases in swine in intensive production).
RADIOLOGY
1. Mobile radiographic devices. 2. Radiographic techniques for filming distal portions of the body. 3. Radiologic analysis and interpretation of findings associated with hoof pathological entities on thoracic and pelvic limbs
PARASITLOLOGY
1. Gastrointestinal nematodes in cattle, sheep and goats; 2. Scabies in domestic ruminants; 3. Lung nematodes in domestic ruminants, 4. Diseases caused by protozoa in domestic ruminants; 5. Tapeworm and liver fluke infestations in domestic ruminants; 6. Other diseases caused by ectoparasites in domestic ruminants; 7. Parasitic diseases of swine
SELECTED CHAPTERS IN PATHOLOGY
1.Special aspects of employing necropsy as a diagnostic method in farm animals; 2. Familiarizing with pathomorphological features associated with more important and frequently occurring cattle diseases; 3. Familiarizing with pathomorphological features associated with more important and frequently occurring swine diseases; 4. Familiarizing with pathomorphological features associated with more important and frequently occurring diseases in sheep and goats.
1

	POULTRY					
	1. Poultry and wildfowl production system (breeding of the parent fle reproduction, hatcheries, chick rearing for different purposes); 2. Pour integration system (health protection, prevention of diseases of vari- etiology, breeding technology for gaining genetic features, which we protect the animal from incubation through period of production); 3. Meth for artificial insemination in poultry.			2. Poultry of various hich would		
	FARM ANIMA	L WELFARE

2.10. Grading and evaluating student work in class and at the final exam	By attending lectures, the student gains 3-6 points (13 lecture hours; each lecture hour equals a 0.46 coefficient). Students must attend at least 7 lecture hours. By attending practicals the student gains 4-6 points (47 exercise hours; each exercise hour equals a 0.12671 coefficient). Students must attend at least 33 hours of practicals. By attending seminars the student gains 4-6 points (30 seminar hours; each exercise hour equals a 0.133 coefficient). Students must attend at least 21 hours of seminars. The activity at the exercises and seminars is evaluated with 5-10 points; the activity will be evaluated through short oral exams, field tasks and practica assignments. There will be a progress test performed during the semester consisting o 20 questions (clinical pharmacology and toxicology, nutrition, radiology welfare, pathology, parasitology, infectious diseases, poultry) and performed in written form. The progress test brings 32 points (each question equals a 1.06 points), 20 points being the minimum required to pass. Taking the progress test during the main term is compulsory (missing the main term needs to be justified). 3 additional progress test terms will be announced, as per agreement with students. (A passing grade for) the progress test is not a requirement for a signature in the grade book. If the student fails the progress test 4 times, he/she needs to take the whole course over again. In case he/she doesn't take the progress test or fails it 4 times, an additional term is possible if the student representative writes an official request to the respective Vice Dean. The Course leader makes the final decision. At the final exam the student can score between 24 and 40 points. A minimum of 24 points must be achieved with the correct answers to 60% of the questions from each area. The knowledge test is written and consists of 30 questions from all areas (internal, obstetrics, surgery) and one correct answer brings 1,333 points.		ad at least 7 e hours; each ttend at least r hours; each d at least 21 10 points; the and practical consisting of n, radiology, poultry) and 06 points), 20 as test during pe justified). reement with nent in order requirement ogress test 4 case he/she m is possible spective Vice 40 points. 2.13 Quality assurance methods that ensure the acquisition of exit competences	Regular classes' attendance-checking, continuous student activity assessment during the entire semester; continuous knowledge checking (progress tests), regular student consultation, students' questionnaire.
2.14 Other (as the proposer wishes to add)	

1. GENERAL INFORM	IATION						
1.1 Course teacher	Prof Krešimir Severin	1.6 Year of the study programme	6				
1.2 Name of the course	Forensic veterinary medicine	1.7 Credits (ECTS)					
1.3 Associate teachers		1.8 Type of instruction (number of hours L + S + E + e- learning)					
1.4 Study programme (undergraduate, graduate, integrated)	Integrated	1.9 Expected enrolment in the course	10-30				
1.5 Status of the course	Compulsory	1.10 Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	1, 10%				
2. COUSE DESCRIPT	ION						
2.1 Course objectives	Forensic veterinary medicine course is conceived in a way to introduce the student in this special field of veterinary medicine. Teaching presents students that all veterinarians deal with this part of legal medicine, not only experts in this veterinarian discipline. The goal of the course is to train students for legal medical judging of disputable cases related to animals and animal products, indicate the important procedures at a crime scene (Site visits and fieldwork) and what are the preconditions for ensuring credible material evidence. Student acquires the knowledge how to create forensic veterinary expertise and how to present their expert explanations by providing findings and opinions through the veterinary expertise and/or statements to the court or other body which seeks these services. Also students will be trained to determine pain, suffering, fear and injuries that have occurred during animal neglect, abuse or cruelty. Finally, students will be given the knowledge about responsibilities of veterinary staff during the performance of veterinary activities and most common type of						
 2.2 Course enrolment requirements and entry competences required for the course 2.3 Learning outcomes at the level of the programme to which the 	veterinary public health newly acquired ones in use in veterinary medic	knowledge of veterinary r h, animal production and bi h the field of forensic veteri cine	otechnology with nary medicine to				
which the course contributes	staff in dealing on reque legal and natural perso

and judgment diseases and disorders in forensic veterinary medicine.		
		and judgment diseases and disorders in forensic veterinary medicine.

Veterinary certificate (exercise in compiling and analyzing specific
court cases). General principles of judgments of organic, infectious and
parasitic diseases. Practical training on court and other cases. Most
important animal diseases and their forensic significance: Internal
diseases - diseases of the respiratory and circulatory system (Chronic
Obstructive Pulmonary Disease (COPD)/Heaves, Pneumonia,
Pulmonary edema, Aortic rupture, Traumatic pericarditis, etc.) of the
digestive system (Equine colic, Gastric dilatation and volvulus, Bloat,
Acute and chronic hepatitis and Hepatic cirrhosis, etc), metabolism
disorders (Ketosis, Azoturia syndrome, Nutritional myopathy of
equides, etc.), urinary tract (Acute and Chronic renal failure,
Pyelonephritis of cattle, etc.), nervous system (Hydrocephalus internus
chronicus acquisitus et oedema cerebri, Epilepsy, etc.).
Surgery (surgical procedures – Male castration, Gastric dilatation
volvulus, Equine colic, Bone fractures, etc.), orthopedics (diagnostic of
lameness – Laminitis, Navicular disease, etc.) and ophthalmology
(Moone blindness, Cataracta, ect.).
Reproduction and obstetrics – diseases related to Pregnancy (Embryo
and Fetal mortality), Parturition (Difficult parturition), Puerperium
(Foetal retention, Endometritis, Prolapse of uterus, ect.), diseases of
the mammary glands (Mastitis, etc.). Infectious diseases - infectious
diseases of domestic animals (Malignant edema, Pasteurellosis,
Leptospirosis, Brucellosis, Aujeszky's disease, Tuberculosis, Tetanus,
etc.), horses (Equine infectious anemia, Equine viral rhinopneumonia,
Strangles, etc.), cattle (Malignant catarrhal fever, Paratuberculosis,
Enzootic bronchopneumonia of cattle, etc.), pigs (Progressive atrophic
rhinitis, Enzootic pneumonia, Classical swine fever, etc.), sheep
(Infectious foot rot in sheep), dogs (Distemper), rabbit (Myxomatosis).
Parasitic diseases - skin (Acariasis), respiratory system
(Metastrongylosis, Protostrongylosis), gastrointestinal system
(stomach and intestine - Ostertagiosis, Trichostrongilidoza, Ascarosis,
Parscarosis, Strongyloidosis, Coccidiosis, Echinococcosis,
Cysticercosis, Trichinellosis; liver - Dicrocoeliosis, Fasciolosis)
circulatory system (Babesiosis, tajlerioza), other tissues
(Leishmaniasis) and bee disease (Nosema, Acariosis, Varroasis).
IV. Site visits and fieldwork / Crime scene investigation:
Organization and management of the site. Liabilities in professional
conduct of official persons (responsibility of police officers, court official
persons, veterinary inspectors and veterinary staff) when collecting
material evidence of biological origin under the provisions and
principles of formal and substantive legal acts. Specific investigation at
the scene. Recognizing, collecting, labeling and security / protection of
biological traces and items that may serve as evidence (Chain of
Custody - Chain of Evidence). Equipment and environmental
conditions. Procedure of establishing and working laboratories for
identification of biological traces (level of reliability regard to credibility
of the material evidence). Collecting and securing procedures for
material traces of biological origin (animal-various tissues, blood, urine,
animal products). Investigation activities on the scene (clinical
examination live animals, necropsy, analysis of blood traces,
entomological analysis).
V. Identification of vertebrates: The scope of application of the
identification of vertebrates in forensic veterinary medicine.
Classification of biological traces in respect to origin and requirements
of veterinary medicine. Animal as a victim, witness and perpetrator.
Specificity of identification requirements in case of protection and
conservation of endangered species (CITES), issuance of certificate of
pure breeding and Pedigree of breeding animals, analysis in inspection
control of animal products or animal feed origin. Identification check (in
internal trade or across the borders of the Republic of Croatia). Species

	identification, individual identification. Determination of animal origin (parental), parentage determination, population identification. Selection of identification methods according to their specificity and sensitivity in procedure requirements and sample quantity and quality. VI. Conditions contrary to animal welfare: Animal neglect (overfeeding, inadequate feeding, malnutrition, starvation, dehydration, inadequate conditions for keeping animals and inadequate animal care). Cruelty to animals (animal abuse, killing and torturing). Classification according to the type of insult: physical, psychological and sexual abuse. Injuries as a consequence of cruelty. Animal hoarding-Diogenes Syndrome (obsessive animal collecting). Munchausen syndrome. Animal fighting. Illegal animal killing and slaughter. Inadequate conditions of animal breeding and transportation. VII. Forensic veterinary toxicology: Defining the field of forensic toxicology. Investigation procedures related to poisoning. Veterinarian's duties and legal liabilities. Collaboration with the relevant authorities in animal poisoning cases. Ecotoxicology - court and other cases (environmental pollution, biological indicators). Overview of prohibited substances and methods in sport animals. Competition doping control procedure (prohibited list of chemicals, process of determining responsibility in the case of a positive finding). VIII. Behavioral Problems of Domestic Animals : Practical training on court and other cases related to: aggression, cribbing (aerophagia, windsucking), stall walking and weaving/ stall kicking, head shaking in horses; aggression, intersuckling in cattle. IX. Responsibilities of veterinary profession: Definition of responsibility of veterinarians, veterinary organizations, veterinary inspectors, persons engaged in animal transport and animal attendants for damages associated with animal transport).

FIELD SERVICE CLINIC

1. GENERAL INFORM	MATION				
1.1 Course teacher	Full prof. Nikica Prvanović Babić, PhD, DVM	1.6 Year of the study programme	6 th		
1.2 Name of the course	Field Service Clinic	1.7 Credits (ECTS)	6,0		
1.3 Associate teachers	Multidisciplinary and case oriented nature of this subject would include variable team of clinical veterinary surgeons, depending of case load. Clinical surgeons would involve all teaching staff from Clinic for obstetrics and reproduction, Clinic for internal deseases, Clinic for surgery, orthopaedics and ophthalmology and Department for microbiology and infectious deseases with clinics. In absence of full prof. Prvanović Babić, PhD, DVM course leader as her replacement would be asst. prof. Darko Grden, PhD, DVM.	1.8 Type of instruction (number of hours L + S + E + e-learning)	0+0+60+0		
1.4 Study programme (undergraduate, graduate, integrated)	integrated	1.9 Expected enrolment in the course			
1.5 Status of the course	obligatory	1.10 Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIPT					
2.1 Course objectives	In addition to the general objectives and tasks of educating future veterinary surgeons, a special objective within this course to enable students to do professional work in the diagnosis, curing and prevention of animal diseases in the field.				
2.2Course enrolment requirements and entry competences	Attended all cases I - X.	semester			

required for the course								
2.3Learning outcomes at the level of the programme to which the course contributes	Acquiring the skills needed to perform the independent veterinary practices in the field condition.							
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	clinical examination in conditions patients or cadavers which would tests. Perform all obstetrical proce conditions of fieldwork and routine all aspects of clinical reproductive	Independently perform all diagnostic procedures including methods of clinical examination in conditions of field work. Taking samples from the live patients or cadavers which would enable material for all types of laboratory tests. Perform all obstetrical procedures that can be performed well in the conditions of fieldwork and routine gynecological and andrological exams for all aspects of clinical reproductive practice. Perform all surgical procedures adapted to conditions of fieldwork and thorough clinical examination of all kinds of internal deseases on farm.

2. COUSE DESCRIP	TION				
2.1 Course objectives	The aim of the course is to acquire knowledge on occurrence and spreading, clinical detection, pathological changes, diagnostics and treatment of diseases as well as preventive procedures needed for field				
2.2 Course enrolment requirements and entry competences required for the course	work.				
2.3 Learning outcomes at the level of the programme to which the course contributes	Student will successfully interconnect gained knowledge from fields of technology, nutrition, hygiene and diseases of poultry what will serve them to successfully perform prevention and cure in the field.				
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Recognize poultry diseases of infectious and noninfectious ethiology Knowing basics of technology principals and poultry health protection be able to independently organize health control on poultry holdings in defined area independently estimate serology and other diagnostic procedure results and recommend and apply immunoprotection measures Independently apply basic principles of treatment and other procedures with aim to protect and control specific diseases, especially zoonosis. Perform necropsy and select appropriate samples for further diagnostic procedures. 				
2.5 Course content broken down in	Lectures: 1 Introduction to intensive poultry breeding (Poultry breeding in world and Croatia, improvement trend of differences between farm and				

detail by weekly	extensive way of poultry breeding, application of organic and "free range"
class schedule	breeding, poultry production in relation to other animal productions),
(syllabus)	Preventive principles in wider terms (Choice of genetic basis as
	precondition for a successful production, genetic resistance, adaptability to
	newly appearing environmental circumstances, genotypic ambient
	combinations, chromosome deviations, lethal defects and genetic factors
	of dying, oligenic determined diseases and deformities, domestication, mistakes in nutrition as precondition of disease appearance, production
	technology, housing as precondition for animal production and welfare),
	Preventive principles in narrower terms (Immunoprophylaxis, multiplying
	of causative agents and ways of spreading, immunity of bird (specific and
	unspecific), immunity defects, factors damaging immunity, vaccination,
	treatment as preventive measure, stress conditions (environment, nutrition,
	social stress, incubation), adaptability syndrome, metabolic changes of
	immunity, stress alleviation, diagnostics as preventive, hygienic, sanitary
	and administrative measures and welfare of poultry), 2 Viral diseases-
	paramyxovirosis, 3 Orthomyxovirosis, rhinotracheitis of turkey, 4 Infectious bronchitis, infectious laryngoitracheitis, fowlpox, 5 Infectious bursal
	disease, chicken infectious anaemia, 6 Marek disease and other
	lymphoprolipherative diseases (leucosis/sarcoma complex and
	reticuloendotheolisis), 7 Adenovirus infections, avian encephalomyelitis, 8
	Turkey Coronavirus enteritis, picornavirus infections, reovirus infections, 9
	Bacterial zoonoses, 10 Salmonella and other Enterobacteria infections, 11
	Pasteurellosis and related diseases (The most important bacterial diseases
	specific for poultry and feathered game, especially the ones which can
	endanger the human health at the same time. Systems of bacterial disease
	transmission and their role in aetiological complex of multi causal diseases, and procedures for prevention of such disease outbreaks. Ways of
	treatment without use of harmful medicaments), 12 Fungal and protozoan
	diseases (Aspergillosis, candidiasis, dactyloriosis, favus, coccidiosis), 13
	Metabolic diseases, diseases of skeleton and muscles, Ascites-
	hydropericard
	Seminars: 1. Immune system of poultry, immunosuppression and Gumboro
	associated diseases (Inclusion body hepatitis, Gangrenous dermatitis,
	Haemorrhagic enteritis of turkey, necrotic enteritis, ulcerative enteritis), 2.
	Pathogenesis of respiratory diseases (structure of the respiratory system,
	pathogenesis of respiratory diseases, Paramyxovirus infections different
	from PMV-1) and prevention of lymphoprolipherative diseases, 3. Other
	viral infections (avian nephritis, astrovirus infections, transmissible viral proventiculitis, rotavirus infections, Arbovirus infections) and viral
	infections of waterfowl (Duck viral hepatitis, Duck viral enteritis,
	Haemorrhagic nephritis enteritis of geese, Parvovirus infection of
	waterfowl, Circovirus infection of waterfowl, hepatitis B), 4. Mycoplasma
	infections (Mycoplasma gallisepticum , Mycoplasma meleagridis,
	Mycoplasma iowae, Mycoplasma synoviae) and other bacterial infections
	of respiratory system (bordetellosis, Infectious Coryza, Gallibacterium
	anatis), 5. Other bacterial infections (Prevention of salmonella, Listeria
	infections, Enterococcus infections, Erysipelas, Stphylococcosis, Pseudomonas infections, Avian Intestinal Spirochetosis, Probiotics and
	prebiotics in diseases prevention in poultry, Microbiome), 6. Mycoses and
	mycotoxicoses (Dactylariosis, Cryptococcosis, Zygomycosis and toxicoses
	caused by trichothecenes, ochratoxins, aflatoxins, fuminosins,
	fusarochromanone, cyclopiazonic acid, oosporein, citrinin, zearalenon,
	moniliformin, rubratoxin, ergotism), diseases caused by mistakes in
	nutrition, metabolic and developmental diseases (Diseases cause by water

	scarcity, unbalanced electrolytes, diseases caused by avitaminosis, syndrome of sudden death, cannibalism, feather pecking, "round heart" and aorta rupture at turkey) 7. Parasitic diseases (Cestodes, Trematodes, Nematodes, Trichomoniasis, Histomoniasis (Blackhead), Hexamitiasis, external parasites and pests), 8. Field cases, 9. Field cases, 10. Field cases, Exercises: 1 Introduction to poultry necropsy, 2 Necropsy, 3 Necropsy, 4 Necropsy, 5 Necropsy, 6 Hatchery egg cull analysis, 7 Bacteriology lab, 8 Virology lab, 9 Principles of vaccination and blood sampling, 10 Molecular lab, 11 Biosecurity 12 Field trip – broiler farm, 13 Field trip – egg layer farm, 14 Field trip - hatchery

2. COUSE DESCRIPTIO						
2.1 Course objectives	FOOD HYGIENE AND TECHNOLOGY Dates of veterinary public health in the wider sense of the word can be defined as a veterinary practice in the protection of human health (or as in veterinary public health). In the administrative, however, the sense of veterinary public health can be defined as a veterinary practice in the implementation of regulations in the field of veterinary and health surveillance of foods, especially with regard to the protection of human					

health against diseases of animals and their raw materials and products can be transmitted to humans. The main task of Veterinary Public Health is coordinating the participation of veterinary medicine in the practice of public health and preventive medicine. Security strategy in function of processing and transport and quality control of foods is possible on the basis of the HACCP concept (Engl. Hazard Analysis Critical Control Points), ie, risk assessment and critical control points. In the context of ensuring safety and quality of food is particularly important role of good manufacturing practice (GMP concepts) within the SQA-concept, which includes the quality, safety and acceptability of foods on the market. In the management of product safety priority should be given to the active mediation before the inspection. To familiarize students with facilities for processing meat and other foods, as well as storage systems, cooling and freezing for the purpose of education in the field of health and safety factors and improving the quality of food of animal origin. The aim of veterinary-sanitary control is the protection of human health, preventing the spread of infectious and parasitic diseases of animals and the protection of the economic interests of consumers. The goal of the veterinary-sanitary control in the production, processing, storage and transport of foods eliminated from consumers dangers that may arise eating rotten and health harmful, or faulty medical supplies. Foods are an ideal environment for the proliferation of microorganisms and can be carrier of various diseases, particularly zoonoses, but also those that are just transferred store. May include specific causes of bacterial poisoning people and the microorganisms that its biochemical activity can lead to the creation of various toxic substances. It follows that the hygienic quality of the total valuation basis foodstuffs. The aim is to familiarize students with the regulations governing the proper conduct of veterinarysanitary activities in this segment (Veterinary Act, Food Act, Consumer Protection Act and the regulations which are based on these laws).

ANIMAL HUSBANDRY

Getting acquainted with modern methods used in evaluation of sustainability of certain production systems. Gathering knowledge about genetic basis of characteristics that are most important for quality of animal products. Gathering knowledge about the possibilities of changing genetic basis which is responsible for the animal product quality characteristics.

NUTRITION

Explain the influence of chemical composition and amount on characteristics of animal products. Define approved possibilities of manipulation with the quality of animal products by interventions in feeding. Inform students with EU legislative concerning the using of feedstuffs and feed additives. Feed additives in Croatian legislative (NN 26/98). The concept of food chain in modern world. Explain which deleterious substances could enter food chain and adversely effect human health. Inform students with current scientific advances in GMO field.

ANIMAL HYGIENE, ENVIRONMENT AND ETHOLOGY

Adverse impact of certain factors (the way of accommodation, size of space, rough handling during transfer, inadequate way of separating calves from their mother, cutting tails and teeth, inadequate transport, etc.) on the welfare of animals in group systems (occurrence of stress, pain, suffering) and measures and methods for their prevention. Health aspects related to microbiological contamination of water - hydro infection, inorganic and organic compounds, occurring in water disinfection, MDK. Modern processes and alternative methods of disinfectants new

	generation, the basic rules of disinfection and factors affecting performance. Treatment and disposal of the waste and animal fecal matter in order to prevent and control diseases, particularly zoonoses. The use of modern insecticides to combat pests that molest and transmitters of a number of infectious and parasitic diseases, particularly zoonoses. Mechanical and physical measures to prevent the entrance of rodents in enclosed rooms. Choice of means to combat rodents. Precautions against possible contact and the harmful effects of toxins in foods of animal origin.
	ZOONOSES Gaining knowledge about the importance of zoonotic foodborne. Repetition of previously acquired knowledge in general epidemiology. Understanding the specifics of the spread of infectious diseases through products and raw materials of animal origin depending on their agent. Gaining knowledge about the basics of diagnosis of infectious diseases, as well as the implementation of measures to prevent the spread and prevention of zoonoses spreading food.
	PARASITOLOGY Parasitology and parasitic diseases enables students for understanding the biology, morphology and determination of endoparasites as a ethiological factor of foodborn zoonoses. The student will be capable: to distinguish and make identification of each group of parasites and each parasite and their developmental stages among the group; understanding the epidemiology of parasitic diseases and pathogenesis caused by parasites and parasitic developmental stages; developing laboratory and diagnostic skills in the preparation and examination of a range of specimens for diagnosis and identification of parasites and their developmental stages; demonstrate knowledge and practical skills in therapy and control of foodborn parasitic diseases.
	PHARMACOLOGY and TOXICOLOGY Residues of veterinary drugs (pharmacologicaly active substances) in food animals, milk, eggs and honey. Determination of withdrawal time folowing the procedure (algorithm): NOEL (no observable effect level), ADI (acceptable daily intake), MRL (maximum residue limits) and dinamic of depletion of residues from target tissue. Categorisation of pharmacologicaly active substances and auxiliary materials in two groups (regarding MRL). Residua and sublethal effects of xenobiotics and some esential compaunds. Laboratory instrumental analysis in the context of veterinary public health, contaminants and resida of chemicals, monitoring and validation of methods. Legislation.
2.2 Course enrolment requirements and entry competences required for the course	The requirement for routing: Passed courses Hygiene and Food Technology and courses Quality Control and hygienic Quality of Food; Veterinary Legislation in Food Safety
2.3 Learning outcomes at the level of the programme to which the course contributes	Acquired knowledge and skills are deepen until the specialist knowledge in the field of food security and enable students to work independently in the control and monitoring of biological, chemical and physical contaminants in raw materials and products and in the food chain. In addition, students are introduced to the concepts of production control (HACCP) and prerequisite programs. Also students connect knowledge in the field of animal hygiene, animal husbandry and nutrition, and put them in the context of the food chain. Special attention is given to the zoonosis control and monitoring of residues of veterinary drugs in the food of animal origin.
2.4 Learning outcomes expected at the level of	- knowledge-term veterinary public health and the modern conception of veterinary control in the production and trade of food, explain the role of

the course (4 to 10	veterinary medicine in the protection of human health and evaluate the
learning outcomes)	hygienic, technological and veterinary requirements for building and
······································	equipping facilities for the production of food and the production and sale
	of foods according to national and EU standards; identify hazards and
	risks in the production and distribution of food of animal origin
	- propose appropriate measures to improve the yield and quality of
	products in a specific animal production system and evaluate and
	propose the most appropriate way of exploiting breeding animals
	considering their fentypic genotypic characteristics
	-knowledge of xenobiotics and essential substances that may be present in animal foodstuff and through adverse effects on human health and
	connect the adverse effect on reproduction with certain xenobiotics, to
	link the occurrence of neoplasia with adverse effects, to connect
	immunotoxicity with adverse effects of individual xenobiotics or more
	- identify suspected zoonosis that primarily transmitted through products
	and raw materials of animal origin and to identify important risk factors in
	the transmission of zoonoses through products and raw materials of
	animal origin
	- choose the method of sampling materials and diagnostic procedures to
	objectively diagnose zoonoses transmitted through products and raw
	materials of animal origin - apply the procedures of general prophylaxis to protect against zoonoses
	transmitted through products and raw materials of animal origin, to
	assess the risk of disease in humans and recommend measures for the
	control and prevention of zoonoses transmitted through products and raw
	materials of animal origin
	- understand the biology, development, pathogenesis and paths of
	parasitism caused by foods of animal origin.
	- independently assess the benefit of economically exploitable animals for
	food production based on conditions in individual technological stages of production
	- propose appropriate sanitation measures in order to preserve the health
	of animals and humans and select the appropriate veterinary care waste
	in order to protect the environment and prevent the occurrence of
	diseases of animals and humans
	- conduct laboratory diagnosis and interpret the findings.
	FOOD HYGIENE AND TECHNOLOGY
	1. Significance and sphere of veterinary activity in public health
	(Definition of the veterinary public health. Veterinary activity in the field of
	public health. Food hygiene and control systems according to the concept "from farm to table". Directives of the EU relative to the veterinary
	requirements in the production and trade of foodstuffs). The structure and
	activity of the Veterinary and Food Safety Office
	4 h lectures + 2 h seminars + 4 h field exercise
	2. Modern concepts of the veterinary-sanitary control in the production
	and trade of foodstuffs (Risk assessment in the function of ensuring the safety and quality of food. Risk management in the area of food safety.
2.5 Course content broken down in detail	Risk communication. Application of HACCP concept in the production
by weekly class	facilities. Prerequisite programs (GMP, GVP, GHP) in the strategy of food
schedule (syllabus)	and nutrition safety. Quality deregulation in the application of good
	manufacturing practice).
	4 h lectures + 2 h field exercises
	3. Management of foodstuff quality and safety (Quality management
	systems in the food industry. Quality assurance. Approach to marketing
	management. Trends of organisation of the foodstuff production and
	control (monitoring) from the aspect of production and quality control management. Production management and organisation of the quality
	control of foodstuffs from the aspect of their safety, quality and
	acceptability.
	2 h seminars

 4. Hygienic-technological and veterinary-sanitary conditions of construction and arrangement of food production facilities (Facilities for slaughter of ungulates, equidiae, poultry and rabbits. Facilities for treatment and cutting of meat of slaughter animals and game. Cooling and freezing plants, and facilities for storage of foodstuffs of animal origin. Facilities for meat processing and production facilities for foodstuffs of animal origin. Facilities for meat processing and production facilities for foodstuffs of animal origin. Milk processing facilities). 2 h lectures + 8 h field exercises 5. Biological, chemical and physical contaminants in the nutritional chain. (Risk evaluation. Risk and risk assessment in epidemiology. Risk assessment methods - qualitative and quantitative approach. Risk and supervision, targeted supervision, risk-based supervision. Microbiological risk assessment. Risk management. "Hidden risks" . Contamination of foodstuffs with enteric pathogenic bacteria and residues of harmful substances in animal products. Health safety of foodstuffs under the conditions of industrial production and modern procedures of processing and preservation with abundant use of additives) 4 h lectures + 2 h exercises + 2 h seminars 6. Alimentary infections and intoxications (Bilogical risks. Food-borne spoilage microorganisms).
9 h lectures + 4 h seminars 7. Food production in family farms (Production of foodstuffs in family farms, legal regulations, and veterinary-sanitary control. Ecological production). 1 h lectures 8. Food fraud
2 h lectures + 2 h seminars
ANIMAL HUSBANDRY 1. Risk factors and their relationship in different animal productions systems (the definition of certain risk factors in intensive, extensive and ecological production; methods for analysis the relationship between risk factors in animal production; elimination of risk factors in animal production). 2 h lectures
 Genetic basis of animals and its impact on quality of animal products (methods of population and molecular genetics in quality evaluation of animal products);
2 h lectures 3. Methods and effects of selection of animals concerning quality of meet, milk eggs and other products (the definition of breeding and selection goals concerning quality of animal products) 2 h lectures
NUTRITION 1. Influence of animal nutrition on the quality of animal products (meat quality; milk quality; egg quality; functional feed and nutraceuticals); Feed additives (approved feed additives; forbidden feed additives); 2 h lectures
2. Deleterious substances in animal products (microorganisms; mycotoxins; heavy metals; hormones; pesticides; biogenic amines). Genetically modified feed (types of genetically modified feed; using of genetically modified feed) 2 h lectures + 2 h seminars
ANIMAL HYGIENE, ENVIRONMENT AND ETHOLOGY 1. Economic well-being usable animals for food production (the impact of environmental and breeding and technological factors on animal welfare)

2 h le 2. The hygiene of drinking water (drinking water quality and health r legislation) 3. Disinfection in public health (types, methods and implementation of the disinfection measures to safeguard human ar animal health), 2 h le 3. Veterinary Waste - health risk (faeces and animal matter), Insect of importance in public health (modern procedures and alternative methods for controlling harmful insects), Pest Control in Public Heal (rodent control procedures in manufacturing plants and warehouses faed of network of the sector of th							
						1000 OF anima	food of animal origin). 2 h lectur
ZOONOSES 1. Foodborne zoonosis (zoonoses caused by bacteria - salmonellosis, botulism, kampilobacteriosis, shigellosis, <i>E. coli</i> infections, brucellosis, tuberculosis, anthrax, listeriosis, Q fever, zoonoses caused by prions (GSE - Creutzfeldt-Jakob disease). 4 h lectures

1.1. Course teacher	Full Prof. Tajana Trbojević	-	Second year, FOURTH			
1.2. Name of the	Vukičević ARCHAEOZOOLOGY	programme	semester 2			
course		1.7. Credits (ECTS)	2			
1.3. Associate teachers	Prof. Snježana Kužir; Kim Korpes, dr. med. vet.; Magdalena Kolenc, dr. med. vet	1.8. Type of instruction (number of hours L + S + E + e-learning)				
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course				
1.5. Status of the course	Elective	 1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%) 	1. level (application of VEF-LMS)			
2. COUSE DESCRIP						
2.1. Course objectives	Students will get inside the basic archaeozoological methods, learn to determine skeletal elements and taxonomic affiliation, learn to classify animal's age and sex based on tooth eruption and attrition and long bones epiphysis fusing/unfusing, learn to evaluate animals withers height and biomass, know how to recognize basic taphonomical processes on animal bones, recognize and distinguish traces on bones: chewing marks, disarticulation and butchering traces, animal bones and horns processing into tools and ornaments and learn					
2.2. Course enrolment requirements and entry competences required for the course	to write archaeozoological results and insert it into entire archaeological report. Completed courses "Anatomy with organogenesis of domestic animals I" and "Anatomy with organogenesis of domestic animals II", finished attendance at course "Anatomy with organogenesis of domestic animals III". The advantage of enrollment will have those students who have passed pre-requisites courses with very good or excellent grade. Maximum number of students: 20					
2.3. Learning outcomes at the level of the programme to which the course contributes		n of the courses, students wi nical science to other profess				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	withers height and biomass based on its skeletal remains; interpret					
2.5. Course content broken down in detail by weekly class schedule (syllabus)	1. Introduction to archaeozoology (definition and objectives of archaeozoology, historical development and the division of archaeozoology, domestication and its effect to the morphology of the mammal bones); 2. Basics of skeletal system of mammals and birds (complementing knowledge gained from comparative osteology of mammals and birds; determination of skeletal elements and taxonomic affiliation); 3. Laboratory processing of archaeological materials (preparation, marking and preservation of animal bone remains, quantification of samples (MNI, NISP), determining the age and sex, identification of pathological changes in the bones, teeth and horns of animals); 4. Basics of					

	osteometry (measures on the bones, osteometric indices, estimate height and biomass of animals); 5th Taphonomy (definition of taphonomy, identification of taphonomic changes and time of their creation, marks on the bones, bone and horn processing to tools and jewelry); 6. Interpretation of archaeozoological findings in the archaeological report (writing report, bones storage, archiving documents of archaeozoological samples). Lectures: Introduction to archaeozoology (2 hours) The basics of the skeletal system of mammals and birds (2 hours) The basics of the skeletal system of fish and amphibians (3 hours) Primary and secondary archaezoological analysis (5 hours) Introduction to taphonomy (2 hours)							
	Exercises: Determination and Osteometry and o Evaluation of anin Identification of th Writing reports, fil	Interpretation of archaeozoological findings (1 hour)

2. COUSE DESCRIPTION		· · · · ·		
2.1 Course objectives	superovulatory treatm transfer of embryos to with application of othe fertilization in vitro (laparoscopic aspiration biopsy and sexing, em regulations related to i	ent, embryo flushing, o recipients. Students wi er biotechnologies such a transvaginal ultrasound n), in vitro production of bryo evaluation, cryopre- nternational trade of emb	b transfer in farm animals: evaluation of embryos, ill also be acknowledged is collection of oocytes for guided ovum pick up, bovine embryos, embryo servation of embryos and pryos.	
2.2 Course enrolment requirements and entry competences required for the course	Farm Animals and Hor	Ses		
2.3 Learning outcomes at the level of the programme to which the course contributes	The course contributes to higher competences in the field of animal breeding. Assisted reproductive technologies like artificial insemination, superovulation, in vitro fertilization, embryo transfer have been introduced to overcome reproductive problems, to increase the number of offspring from selected female's and to reduce the generation intervals in farm animals. This advanced reproductive technology provides a powerful tool for rapid change in animal population. As these technologies will play an important role in future perspective for efficient reproductive performance in livestock, this course presents an important part in education of new generation of students.			

2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Acknowledgment with application of assisted reproduction in veterinary medicine Selection of donor and recipient cows in MOET Synchronization of donor and recipient cows Transfer of embryos in recipients						
2.5 Course content broken down in detail by weekly class schedule (syllabus)	1. Introduction to assisted reproductive technologies; 2. Embryo Transfer in cattle (selection and management of donor and recipient cows, superovulation, A.I., flushing, isolation and evaluation of embryos, embryo transfer); 3. Embryo Transfer in small ruminants (synchronization and superovulation of donors and recipients, superovulatory response, mating and A.I., flushing, isolation and evaluation of embryos, laparoscopic transfer of embryos); 4. Embryo Transfer in mare (synchronization, mating and A.I. of donor mares, flushing, isolation and evaluation of embryos, synchronization and management of recipients, transfer of embryos); 5. In vitro production of embryos (source of oocytes : slaughterhouse ovaries, OPU, in vitro maturation of oocytes, in vitro fertilization, semen preparation for IVF, in vitro culture. 6. Evaluation of embryos; 7. Cryopreservation of embryos, 8. Introduction to advanced biotechnologies (embryo sexing, embryo splitting, transgenesis, cloning), 9. Preservation of endangered and indigenous animals, Cryobank.

BIOLOGY AND ECOLOGY OF PREDATORS

1. GENERAL INFOR	MATION				
1.1. Course teacher	Prof Josip Kusak	1.6. Year of the study programme	The second year		
1.2. Name of the course	Biology and Ecology of Predators	of 1.7. Credits (ECTS) 2			
1.3. Associate teachers	Assoc. Prof Tomislav Gomerčić, Assoc. Prof Magda Sindičić	1.8. Type of instruction (number of hours L + S + E + e-learning)	L=8; S=4; E=18		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate studies	1.9. Expected enrolment in the course			
1.5. Status of the course	Elective	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	20% (six hours e- learning lectures and two hours of direct lectures)		
2. COUSE DESCRIP	TION	· · · · · · · · · · · · · · · · · · ·	<u> </u>		
2.1. Course objectives	The aim is to give students the right perspective of ecological role of organisms that are on the top of food pyramid, including their evolution and existence in the balance with the prey species. The course is a specific extension of the course «Zoology», and specifically of the section «basic ecology». The goal is to make clear to students that predators have their ecological role in keeping the ecosystem in balance. Humans are also close to the top of food chain, and they do interfere with predators through direct competition resulting in extermination of many predator populations. In addition to Carnivores (bear, wolf, lynx), analyzed are sea mammals, birds of prey, and carnivorous fishes. Understanding of mutual relation of predators and their prey, population dynamics and size regulation, and role for humans is useful for modern				
2.2. Course enrolment requirements and entry competences required for the course	veterinarian. The subject Biology and ecology of predators is at the second year of the Veterinary medicine study. Requirements for enrolment are that students have completed the subject Zoology and can use English by speaking and writing it.				
2.3. Learning outcomes at the level of the programme to which the course contributes	 recognizing predation at different trophic levels knowing biological features of predatory species 				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 evaluate the possibilities of research in captivity explain that predators may be the objects of hunting, but also as pet animals understand interactions of predators and prey by the use of simulation models of food chains understand the value of large carnivores for the stability and diversity of ecosystems 				
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Status and importance of orgat population size regulation; 2. BREEDING AND HUSBANDRY OF RABBITS AND FURBEARERS

1. GENERAL INFOR	MATION				
	Ekert Kabalin Anamaria,	1.6. Year of the study	3rd		
1.1. Course teacher	PhD, Full Professor	programme			
1.2. Name of the course	Breeding and Husbandry of Rabbits and Furbearers	1.7. Credits (ECTS)	2		
1.3. Associate teachers	Velimir Sušić, PhD, Full Professor Sven Menčik, PhD, Assoc. Professor Maja Maurić, PhD, Assistant Professor Ivan Vlahek, VMD	1.8. Type of instruction (number of hours L + S + + e-learning)	3L + 2E + 25S (as e- learning) - E		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course	- n		
1.5. Status of the course	elective	1.10. Level of application of learning (level 1, 2, 3), percentage of online instruction	of e- 2, 80%		
2. COUSE DESCRIP	ΓΙΟΝ				
2.1. Course objectives	Getting knowledge necessary for identification of certain rabbit breeds, as well as types of furbearing animals and cage pets. Adoption of fact about uses of rabbits and furbearers, exhibitions, methods and systems of breeding. Getting theoretical and practical skills necessary for animal handling and treating. Adoption of basic of genetics in the fur production, the basics of making business and investment plan with respect to the possibility of placing products on the market.				
2.2. Course enrolment requirements and entry competences required for the course	-				
2.3. Learning outcomes at the level of the programme to which the course contributes	animals and cage pets, m pets, handling and treatm	ut certain breeds of rabbits ethods of breeding for proc ent of animals (breeding, o itions, recognition of diseas	duction purposes or as ffspring handling,		
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successfully completion of the course students will be able to: explain the difference between rabbit and hare, as well as main characteristics of furbearers and cage pets identify the category and breed of rabbits and type of fur-animals or cage pets learn how to handle and treat animals apply their knowledge in breeding of cage pets (rabbit, mouse, rat, guinea pig, hamster, chinchilla, degu) organize farm production				
2.5. Course content broken down in detail by weekly class schedule (syllabus)		the effectiveness of rabbit meat production Methodological unit / course content Class schedule (lectures + exercises + seminars + e- learning)			

the total number of ECTS credits is equal to the ECTS value of the course) Tests Oral exam (other) Written exam 0,5 Project (other) Written exam 0,5 Project (other) Writing and submitting of seminar before taking final (written) exam. Students can achieve a maximum of 50 points from final exam. The final grade is based on obtained points. 2.10. Grading and evaluating student work in class and at Points Grade

2.2. Course enrolment requirements and entry competences required for the course					
2.3. Learning outcomes at the level of the programme to which the course contributes	Learning outcomes at the level of the programme: Understanding the basic science on which veterinary medicine is based Research: the ability to search the literature, databases and other information sources, the ability to design and conduct experiments in the field of veterinary medicine, to interpret results and draw conclusions and the ability of use laboratory equipment and make critical analysis of test results Practical skills: the ability of consolidation of the theoretical knowledge and practical skills within the fields of veterinary medicine Complemetary skills: the ability to conduct independent research and work in a team, the ability of presenting the results – oral and in writing				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Learning outcomes at the level of the course: Ater successful completion of the course the student will be able to: 1. differentiate main groups of natural compounds – secondary metabolites; 2. compare the structure and action of secondary metabolites; 3. compare biosynthetic and laboratory formation of important natural compounds: 4. independently use methods for the extraction of compounds from natural sources; 5. propose method for the separation of compounds based on their properties.				

2.5. Course content broken down in detail by weekly class schedule (syllabus)	Definition and differentiation of secondary metabolites. Biosynthesis, laboratory synthesis, properties and action of natural compounds: vitamins, terepenes, carbohydrates, steroids, alkaloids. Methods for separation and identification of natural compounds, examples of laboratory and industrial synthesis, application in human and veterinary medicine. Isolation of caffeine. Preparation and analysis of infusions.

CLINICAL PHYSIOLOGY

1. GENERAL INFOR	απατιον					
1.1. Course	Prof. Jasna Aladrović,	1.6. Year of the study	4			
teacher	DVM	programme				
1.2. Name of the course	Clinical Physiology	1.7. Credits (ECTS)	2			
1.3. Associate teachers	assist. prof. Lana Pađen, DVM	1.8. Type of instruction (number of hours L + S + E + e-learning)	15L+ 15E			
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course	10			
1.5. Status of the course	elective	 1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%) 	-			
2. COUSE DESCRIP	TION					
2.1. Course objectives	The aim of the course is to prepare students for clinical diagnosis by referring them to research and laboratory procedures that are tailored to specific production cycle and mode of exploitation of production animals. Clinical Physiology gives students an insight into the importance of determining reference intervals of hematological and biochemical parameters in a representative sample and factors that could affect the information contained herein. It instructs students on the importance of clinical enzymology associated with a particular physiological status such as intensive growth and fattening, pregnancy, lactation, and other specific production circumstances. Lectures direct the student to connect the physiological concepts and introduce them to the methodology of scientific research. The organism is seen as a system and physiology is interpreted as systemic clinical physiology. Exercises are used for better understanding of laboratory procedures in the sampling, processing and analytics. Students develop independence in					
2.2. Course enrolment requirements and entry competences required for the course	interpreting the results of hemograms and biochemical analyses. Attended lectures of Physiology of Domestic Animals I and II					
2.3. Learning outcomes at the level of the programme to which the course	Ability to consolidate theoretical knowledge and practical skills in preclinical veterinary medicine related to certain physiological status of animals: growth and fattening, pregnancy, lactation.					
contributes	the health status of animals					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Apprehension of physiologi production. Determining laboratory test production cycles and differ Sampling techniques for ob management.	s of choice for application c rent breeding methods.	luring specific			

	Practical experies	nce in la	boratory ana	lyses.			
2.5. Course content broken down in detail by weekly class schedule (syllabus)	 Practical experience in laboratory analyses. Intracellular regulation, communication within and between cells. Homeostatic mechanisms during growth, gravidity, lactation, milk, meat and egg production. Neuroendocrine regulation, interaction between nervous and hormonal system, stimulation and inhibition. Enzymatic regulation. Mechanisms of stimulation and inhibition of enzymatic reactions. Metabolic status. Alterations of metabolic pathways. Biomarkers of oxidative stress. Oxidation and function of reactive oxygen and nitrogen metabolites, macromolecular damage and its repair. Assessment of organ systems metabolism: bones, heart, kidney, liver, udder, muscles. Metabolic profile and enzymes in specific physiological processes.

1.5. Status of the course	Facultative (elective)	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	20% (three hours)			
2. COUSE DESCRI						
2.1. Course objectives	The aim is to give students the ecological and sociological perspective of conservation of rare and endangered species. The course is a specific extension of the course «Zoology», and specifically of the section «basic ecology». Rare and endangered species do deserve special attention. Legal protection is typically basic but not sufficient mean to secure the species survival. Analyzed are the mechanisms of complex management that include all human-interest groups, with positive and negative attitude towards the species in concern. The examples of need for such complex management are species like bear, wolf, lynx, dolphins, monk seals, birds of prey including fish eating birds. International and Croatian models are discussed. Mutual understanding of all interest groups for the role of each species is to be stimulated. The role of					
 2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to which the course contributes 	veterinarians is exemplified. none 1. evaluate key threats of animals by taxonomic groups 2. select optimal conservation measures for certain species					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 distribute animal species according to IUCN threat categories recognize interest groups in management of certain species understand procedures of involving interest groups and methods of public surveys set up elements of species management plan 					
2.5 Course content broken down in detail by weekly class schedule (syllabus)	4. Set up "elements of species management plan" IUCN – Caring for the Earth, World conservation strategy, Importance of selected environments, Influences of man through animal production. Croatian situation – causes of big diversity of species and landscapes. Terrestrial and aquatic ecosystems. State and perspectives for Croatian rare species – large carnivores as examples. Presentations and discussions of state and management of brown bear, wolf, and lynx in Croatia. Worldwide situation. International conventions, public interest, economic value, and the role of					

2.6. Format of instruction:	course teachers in large carnivore research and management. Social aspects of endangered conservation. Methods of «human dimension surveys» and application of data to species management. International actions and role of Croatia on worldwide level. Examples of reintroductions of bears and lynx in Europe, and wolves in America. Bear management plan for Croatia. Wolf management plan for Croatia. Lynx management plan for Croatia. Wolf management plan for Croatia. Lynx management plan for Croatia. ENGLISH FOR ACADEMIC PURPOSES I

1. GENERAL INFO	RMATION					
1.1. Course teacher	Dubravka Vilke-Pinter, Ph.D.	1.6. Year of the study programme	1			
1.2. Name of the course	English for academic purposes 1	1.7. Credits (ECTS)	4			
1.3. Associate teachers		1.8. Type of instruction (number of hours L + S + E + e-learning)	8 hours of L+ 40 hours of S (of which 12 hours e- learning)+ 12 hours of E			
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course				
1.5. Status of the course	elective	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRI	PTION					
2.1. Course objectives	The course English for Academic Purposes I is specially designed for the target group of learners, that is students of veterinary medicine. The general objective of the course is to develop students' overall written and oral competence in English to enable them to communicate efficiently in a professional setting. Special empahsis is given to professional literature analysis. Texts from various information sources (manuals, professional and scientific journals, popular magazines, web pages) are analysed to acquaint students with various types of discourse. Students are acquainted with texts belonging to <i>different</i> genres and having different content, function, style and form (summary, report, discussion, essay, etc.), as well as with the language structures typically used in technical texts. Students develop text organisation skills through paragraph and essay writing, as well as the abilities to					
2.2. Course enrolment requirements and entry competences required for the course	design and deliver a well struct					
2.3. Learning outcomes at the level of the programme to which the course contributes	The course focuses on assisting students in developing the skills to speak and write effectively and fluently in an English speaking academic setting. By getting acquainted with the different types of discourse, in particular of that of academic English and the discourse characteristic of the field of veterinary medicine, students improve and develop their overall academic performance as well as the skills of reading research <i>literature</i> . A particular focus is also put on attaining oral proficiency, that is, presenting, interpreting and connecting thoughts as well as following complex lines of arguments and taking part in meaningful discussions.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 develop understanding academic texts written understand structure o constituent parts (sent the cohesive devices u 	 following complex lines of arguments and taking part in meaningful discussions. Having successfully completed this course students will /will be able to develop understanding of language forms and features characteristic of academic texts written in English understand structure of academic texts, the relations between their constituent parts (sentence, paragraph, whole text) and the function of the cohesive devices used in the text get acquainted with the general academic terminology used in

1.1 Course	Dubravka Vilke-Pinter,	1.6. Year of the study	2		
teacher	Ph.D.	programme			
1.2. Name of the course	English for academic purposes II	1.7. Credits (ECTS)	4		
1.3. Associate teachers		1.8. Type of instruction (number of hours L + S + E + e-learning)	8 hours of L + 40 hours of S (of which 12 hours of e-learning) + 12 hours of E		
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course			
1.5. Status of the course	elective	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRI	PTION				
2.1. Course objectives	This integrated skills course develops academic language skills as well as study skills which students need for effective communication in an academic setting as well as for using veterinary medical professional literature. The course aims to develop students' understanding of structural patterns and features of scientific discourse. Special emphasis is given to extracting information from written and oral texts as well as to developing participants written competence, i.e. skills and strategies needed for generating different forms of writing (summary, essay, report, etc.) Emphasis is also put on developing oral skills and strategies needed for taking part in meaningful discussions and delivering well structured and clear oral presentations. In order to enhance course participants' academic language skills, a large range of authentic written and spoken academic texts from a variety of sources (manuals, professional and academic journals, online databases) are used, and students are provided with a variety of practice opportunities, both written and oral.				
2.2. Course enrolment requirements and entry competences required for the course					
2.3. Learning outcomes at the level of the programme to which the course contributes	The course focuses on assisting students in developing the skills to speak and write effectively and fluently, using standard English academic register. Students get acquainted with the academic discourse and improve their knowledge of the language used generally in science and specifically, in the field of veterinary medicine. By attending this course students improve their overall academic performance and acquire skills that are needed to become fluent speakers in an English speaking professional setting as well as independent and efficient users of relevant professional literature.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 develop understanding organized academic tex efficiently identify and independently analyzed 	ted this course students will g of academic vocabulary and t analyse source material app academic texts and their fea ture (online databases, scien	d the structures of ropriate for the discipline atures

1.5. Status of the course	Elective course	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCR	IPTION					
2.1. Course objectives	Livestock and crop production constitute a production unit which is expressed not only by their organic connection, but also with their spatial location. Therefore, the aim of course is that the students acquire knowledge on the impact of weather and climate on plant's life, biological crops and yield, the natural laws on the basis of which a yield could be produced, as well as on the compaction of soil by the antropogenic influence. In the center of discussion is agrotehnicque in all of its aspects and management systems in plant production. Special attention is paid to the ecologic (organic) and sustainable agriculture, so students will gain the knowledge on how to preserve the environment, clean air and soil, drinking water					
2.2. Course enrolment requirements and entry competences required for the course	Passed compulsory course minimum grade 4 (B). Mentor type of teaching, up	e Environment, Animal Behaviour an o to 3 students.	d Welfare with

2. COUSE DESCRIPTION			
2.1 Course objectives	Scope of the subject is to broaden the previously acquired knowledge in the field of veterinary-sanitary inspection of poultry meat. It enables further education of post-graduate students for their future expert work in the field of veterinary-sanitary inspection of poultry meat. By a thorough approach to evaluation of quality and shelf life of poultry meat it will be possible to acquire knowledge and skills needed for subsequent management of production and quality of poultry meat.		
2.2 Course enrolment requirements and entry competences required for the course	The course can enroll only students of orientation "Hygiene and technology of animal food and veterinary public health"		
2.3. Learning outcomes at the level of the programme to which the course contributes	Knowing the specifics of hygiene and quality of poultry meat within the activities of veterinary public health and food safety.		
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 know the technological process of slaughtering of poultry to distinguish certain categories of poultry meat and poultry meat products explain the meaning of veterinary inspection (control and / or monitoring) of poultry meat interpret the results of microbiological examination of poultry 		

2.5. Course content broken down in detail by weekly class schedule (syllabus)	,	 Organisation of the production process (Technological process of the slaughtering processing of poultry. Technological errors of the post mortem aetiology on poultry meat. Possibilities of cross- contamination of poultry meat with food-borne microorganisms). Evaluation of quality of poultry meat on the slaughtering line (Welfare at the time of slaughter, Veterinary-sanitary inspection of poultry meat. Evaluation of the hygienic quality of poultry meat for human consumption. Classification and categorisation of poultry meat). Poultry meat quality (Impact of slaughter welfare on poultry meat quality, Evaluation of freshness and shelf life of poultry meat. Microbiological analysis of poultry meat). Poultry meat products (Shelf life and sensor evaluation of quality of the poultry meat products. Boneless poultry meat. Comminuted meat and comminuted poultry meat products. Sausages, dry-cured products, cans and finished products). 							f the s). e on of t for try meat uality of

ORGANIC POULTRY AND GAME BIRDS PRODUCTION

1. GENERAL INF	ORMATION			
1.2 Course teacher	Assist. Prof Željko Gottstein	1.7 Year of the study programme	6	
1.3 Name of the course	Organic poultry and game birds production	1.8 Credits (ECTS)	2	
1.4. Associate teachers	Prof Tomislav Mašek Assoc. Prof Danijela Horvatek Tomić Assist. Prof Maja Lukač Liča Lozica, dr. med. vet.	1.9 Type of instruction (number of hours L + S + E + e-learning)	10+10+10	
1.5. Study programme (undergradu ate, graduate, integrated)	integrated	1.10 Exp ected enrolment in the course		
1.6. Status of the course	elective	1.11 Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)		
2. COUSE DESCR	RIPTION			
2.1 Course objectives	its sustainability. Th	e knowledge on benefits of organic pou ey will as well overcome technology of e capable of poultry disease recognitior	poultry production	
2.2 Course enrolment requirements and entry competences required for the course				
2.3 Learning outcomes at the level of the programme to which the course contributes	Student will successfully interconnect gained knowledge from fields of technology, nutrition, hygiene and diseases of poultry what will serve them to successfully organize organic production and perform prevention and cure in it.			
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 define basic differences between technology principles in intensive and organic poultry production propose poultry nutrition according to technology principles and breed composition recognize infectious and non-infectious diseases in specific conditions of organic production use classic and alternative principles in disease diagnostic, treatment and prevention identify legal guidelines as basis of organic poultry production. 			

2.5 Course content broken down in detail by weekly class schedule (syllabus)	1 Introduction into organic poultry and game bird production (comparison between conventional and farm poultry production; vertical integration – poultry production on pasture (free-range production) – advantages and disadvantages of free-range production; sustainable poultry and game bird production), 2 Principles of poultry and game bird production (systems of poultry breeding in organic production – combination of house and free-range holding – fencing (electric fence), 3 Genetic and productive traits of poultry intended for organic production (selection of poultry and game birds for free-range production – genetic lines and hybrids of poultry with production aim: meat or eggs), 4 Technology in organic production (summer and winter organic poultry production: heat and cold), 5 Nutrition in organic poultry production (nutrition in organic production: possibility of meat and egg quality manipulation considering the content of biologically active compounds (cholesterol, fatty acids, vitamins, amino acids), feeding with no antibiotics and other medicaments), 6 Nonspecific protection using technology measures (poultry protection in organic production from predators and other pests), 7 Specific health protection according to legislation guidelines for organic production (poultry health protection in organic and free-range holding – viral, bacterial, fungal infections, micotoxicoses and parasitic invasions), 8 Poultry disease diagnostics in free-range production (Disease diagnostics and detection of level of disease protection), 9 Other poultry organic and free-range production (geese, duck, turkey, guineafowl, quail and other game birds), 10 Legal guidelines (legal guidelines in organic poultry production and possibilities of its application in view of etiological complexes)

PHYSIOLOGY OF BIRDS

1. GENERAL INFORM	IATION				
	Full Prof. Suzana Milinković	1.6.Year of the	2		
1.1. Course teacher	Tur	study programme			
1.2. Name of the course	Physiology of Birds	1.7.Credits (ECTS)	1		
1.3. Associate teachers	Prof. Jasna Aladrović, Assistant prof. Ivona Žura Žaja, Assistant prof. Ana Shek Vugrovečki, Assistant prof. Lana Pađen	1.8.Type of instruction (number of hours L + S + E + e-learning)	L12+E3		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine, Faculty of Veterinary medicine, University of Zagreb	1.9.Expected enrolment in the course	10		
1.5.Status of the course	Elective	1.10.Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	-		
2. COUSE DESCRIPT	ION				
2.1. Course objectives	After the successful completion of the elective subject Physiology of birds, students will acquire knowledge peculiarities of the physilogy of birds and gain knowledge of the physiology of reproduction, digestion, respiration, excretion, blood and circulatory system, metabolism, neurophysiology and endocrinology, and behavior of birds.				
2.2. Course enrolment requirements and entry competences required for the course	-				
2.3. Learning outcomes at the level of the programme to which the course contributes	Students during class acquire knowledge about the basic peculiarities of the comparative physiology of birds, and obtained knowledge provide a good introduction to the knowledge of breeding and keeping of birds, and birds diseases.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 After successfully completing this course the student will be able to: explain the peculiarities of the comparative physiology of organ systems of birds interpret the function of various organ systems in different physiological conditions explain and relate the regulatory mechanisms of physiological processes in birds recognize and associate the importance of knowing the physiology of birds with breeding, keeping and diseases of birds

2. COUSE DESCRIPTION	1				
2.1.Course objectives	To introduce students to the characteristics of physiology of amphibians and reptiles: physiology of reproduction, digestion, respiration, hematology characteristics and biochemical parameters. The course gives students a basic understanding of the regulation of homeostasis in amphibians and reptiles: neurophysiology, endocrinology and oversight of structure and function of special sensory organs. Students learn about thermoregulation in amphibians and reptiles, as well as about the specificities of metabolic processes.				
2.2.Course enrolment requirements and entry competences required for the course	-		·		
2.3.Learning outcomes at the level of the programme to which the course contributes	During class students will learn about basic comparative characteristics of amphibians and reptiles physiology. The course follows after the Physiology of Domestic Animals course, and represents a good introduction to the knowledge of breeding, keeping and diseases of amphibians and reptiles.				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	-understanding of the biology of amphibians and reptiles - understanding of the basics of breeding in amphibians and reptiles, and methods of preserving the health of these animals				
2.5.Course content broken down in detail by weekly class schedule (syllabus)	reptiles The development of life in the water, maintenance of homeostasis in the water, adjusting to the life on land. Physiology of reproduction, sexual cycle, the female and male reproductive organs, <u>viviparity</u> , <u>ovoviviparity</u> , developing tadpoles, metamorphosis, the development of the offspring of lizards. Physiology of digestion, food intake,

2. COUSE DESCRI	PTION				
2.1. Course objectives	In our country pigeon breeding presents a certain part in keeping small animals. In that context, many veterinarians in their job meet that kind of bird; at the same time, people ask advice from them about pigeon breeding and keeping. Therefore the goal and aim of this optional course is about future doctors of veterinary medicine to gain basic knowledge about pigeon biological characteristics, pigeon breeding directions, recognition of certain pigeon breeds, role of feeding and diet balancing in specific pigeon categories as well as right

SELECTED CHAPTERS IN AQUACULTURE

1. GENERAL INFORMATION						
1.1 Course teacher	Associate Professor Emil Gjurčević	1.6 Year of the study programme	5 th and 6 th			
1.2 Name of the course	Selected Chapters in Aquaculture	1.7 Credits (ECTS)	2			
1.3 Associate teachers	Assistant Professor Krešimir Matanović, Professor Ivana Tlak Gajger	1.8 Type of instruction (number of hours L + S + E + e- learning)	5+14+11			
1.4 Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9 Expected enrolment in the course	10			
1.5 Status of the course	Elective	 1.10 Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%) 	level 1 online instruction 10%			
2. COUSE DESCRI	PTION					
2.1 Course objectives	Elective course Selected Chapters in Aquaculture is anticipated for students who wish to enlarge general knowledge of breeding of aquatic organisms. Therefore, the aim of the course is to introduce students with aquaculture technologies, and to prepare them for laboratory and field work in the field of breeding of aquatic organisms.					
2.2 Course enrolment requirements and entry competences required for the course	Completed exam in Biol	ogy and Pathology of Aqua	atic Organisms			
2.3 Learning outcomes at the level of the programme to which the course contributes	presents knowledge in the linked to obligatory cour- Upon the completion of and other aquatic organ	se of Biology and Patholog course, students will be qu isms.	ns breeding. This course is y of Aquatic Organisms. alified for breeding of fish			
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Obtain professional knowledge about breeding of certain aquatic organisms. Comprehend aquaculture technologies and main features of aquatic ecosystem. Interpret Regulations relating to aquaculture. Obtain knowledge about nutritional requirements of cultured fish. 					
2.5 Course content broken down in detail by weekly class schedule (syllabus)	 farming in lagoo Breeding of other Regulations relations 	mwater, coldwater and ma ons and fences). aquatic organisms. ng to aquaculture; the legis ion of aquatic organisms) health	rine fish; extensive culture slative (roles and duties			

	 Growth ar 	nd deve	lopment disord	ler			
	 Seminars (14) Breeding of certain warmwater and marine fish species Fish farms (stock sampling, estimation of feed consumption, estimation of yield, health monitoring) Exercises (11) Practical work at wet laboratory Practical work at RAS (technological operations) 						
2.6 Format of instruction:	workshops exercises on line in ent	☑ seminars and workshops ☐ multimedia and the internet ☐ on line in entirety ☐ laboratory ☐ partial e-learning ☐ work with mentor

Professor; Petar Kostešić, DMV, PhD., Assistant; Valentina Plichta, DMV, Assistant; Ivan Butković,DMV, Assistant Associates: Gabrijela Jurkić-Krsteska, DMV	1.7 Type of instruction (number of hours L+S+E+e-learning)	0+0+25		
1.4 Study programme (undergraduate, graduate, integrated)	integrated	1.8 Expected enrolment in the course			
1.7. Status of the course	regular (elective)	1.9 Level of use of e- learning (1, 2, 3 level), percentage of instruction in the course on line (20% maximum)			
2. COURSE DESCRIP	TION				
2.1 Course objectives	The main course objective is to enable the students to acquire the necessary knowledge and skills in emergency and critical care medicine of domestic animals. Veterinary emergency and critical care medicine is the most dramatic part of the veterinary medicine, so resourcefulness and knowledge are critical for the appropriate management of emergency and critical patients. Main goal of the proposed course is to master the basic knowledge and procedures in emergency and critical medicine, so the student will be able to accurately assess, treat and stabilize the patient.				
2.2 Enrolment requirements and required entry		· ·			

competences for the							
course 2.3 Learning outcomes at the level of the study programme to which the course contributes	Synthesis of all the acquired knowledge and skills, especially clinical knowledge, in the light of more accurate and efficient management of emergency and critical patients.						
2.4 Expected learning outcomes at the level of the course (4-10 learning outcomes)	-triage emerger stabilization -diagnose and s -diagnose and s -diagnose and s -diagnose and s -diagnose and s	-diagnose and stabilize patients in shock (of various etiologies) -diagnose and stabilize emergency surgical patients -diagnose and stabilize emergency internal medicine patients -diagnose and stabilize emergency obstetric patients -diagnose and stabilize horses with colic -implement basic critical care					
2.5 Course content broken down in detail by weekly class schedule (syllabus)	1. Triage and primary evaluation and initial laboratory workup,2. Shock and fluid therapy, 3. Emergency bleeding and wound management, 4. Acid- base disorders, 5. Electrolyte disorders, 6. Respiratory distress, 7. Anesthesia and analgezia in emergency and critical patients, 8. Emergencies in cardiology, 9.Urinary tract emergencies, 10. Acute abdomen, 11. Emergencies in gynecology and obstetrics, 12. Emergencies in pediatric patients, 13. Emergencies in neurology, 14. Transfusion in emergency patients, 15. Procedures and protocols in veterinary emergency and critical care medicine, 16. Emergencies in ophtalmology, 17. Emergencies in endocrinology, 18. Critical care medicine 19. Equine emergency and critical care, 20. Small mammals emergency and criticalcare medicine, 21. Practicum					, 4. Acid- s, 7. cute Emergencies usion in y emergency 7. 2.2. Course enrolment requirements and entry competences required for the course	Basic requirements are Ve Special Microbiology with Max number of students: 7		al Microbiology and			
2.3. Learning outcomes at the level of the programme to which the course contributes		Lessons and practical work will capacitate student for further understanding of clinical subjects of the veterinary medicine studies particularly in the area of infectious diseases.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Students will be able to demonstrate, after attended lessons and practices in Veterinary Clinical Microbiology, knowledge on morphology and physiology and identification of the most important causative agents of animal diseases. Student will have additional knowledge on microbes pathogenicity and their relation to antimicrobial substances. After the course students will be able to perform simple procedures of microbs identification, including use of commercial compounds suitable for veterinarians in practice, and will be able to perform immunoprophylaxis of infectious diseases.					
2.5. Course content broken down in detail by weekly class schedule (syllabus)	INTRODUCTORY LECTURE – Introduction to clinical microbiology area of bacteriology, mycology and virology. L -1 SAMPLING METHODS IN MICROBIOLOGY – Sampling procedures and transport of pathogen material to microbiology laboratories, safe measures and documents. L – 2, E – 4 IDENTIFICATION OF MICROBES FROM CLINICAL SPECIMENS – Indentification procedures of bacteria, fungi and viruses, rapid tests. L – 2, E – 6 TESTING FOR THE DRUG SUSCEPTIBILITY OF MICROBES – Techniques (agar diffusion methods, dillution methods), minimum inhibitory concentrations. E – 2 INTERPERTATION OF THE LABORATORY RESULTS AND DIFFERENCIAL DIAGNOSIS – critical point for medical interpretation L -1, E – 5					

	CHOICE THERAPY – methods of choosing the wright antimicrobial therapeutics n different animal species. $L = 2$, $E = 5$

USEFUL INFORMATION FOR STUDENTS

About Zagreb

City of Zagreb is the capital and largest city in the Republic of Croatia. It is a cultural, scientific, economic, political and administrative centre of the Republic of Croatia with seat Parliament, President and Government of the Republic of Croatia.

Area: 641.355 km²

Population: 800.000 (data from 2011)

History in brief: Written documents first mention Zagreb in 904, with founding of the Diocese.

In 1242, Zagreb (then Gradec) was proclaimed Free Town of the Kingdom by the Golden Bull of the Croatian-Hungarian King Bela IV. In 1577, Zagreb was for the first time mentioned in written documents as the capital.

In 1669, Jesuits found the first gymnasium and Academy. The year is taken as the year of establishment of the University of Zagreb.

In 1776, seat of Croatian King's council (Government) moves from Varaždin to Zagreb. On June 25, 1991, Croatian parliament proclaims independence and sovereignty of the Republic of Croatia. Zagreb becomes the capital.

Museums and exhibitions

Archaeological Museum, Meštrović Atelier, Croatian House of Visual Artists, Ethnographic Museum, Gliptoteka HAZU – Sculpture Museum of the Croatian Academy of Science and Arts, Hunting Museum, HT Museum (telecommunications and postal traffic), Croatian History Museum, Croatian Sports Museum, Croatian School Museum, HAZU (Croatian Academy of Sciences and Arts) Department of Prints and Drawings, Modern Gallery, Zagreb City Museum, The Mimara Museum, Museum of Arts and Crafts, Museum of Contemporary Art, Klovicevi Dvori Museum Gallery Centre, Strossmayer Gallery of Old Masters, Technical Museum, Museum of Broken Relationships, Art Pavilion.

Events

Eurokaz (The International Festival of New Theatre), Zagreb Philharmonic Orchestra Festival, The world festival of animated movies, Floraart (International flower and garden show), International folklore festival, Music biennale Zagreb, Week of modern dance, Zagreb Histrion Summer and other theatre performances and concert hall events.

Sport and leisure centres

Hippodrome, Jarun Lake, Bundek Lake, Maksimir Park, Medvednica (Sljeme) Nature Park, Mladost Sports Park, Šalata Sport Centre; Ice Rinks: Dom sportova, Šalata and Velesajam; swimming pools: Mladost, Utrine, Dom sportova; Ski resort Sljerme (10 km from downtown)

PAPERWORK

Keeping up-to-date with the paperwork requirements in a new country is never easy but it's worth the peace of mind. As foreigners arriving to a new country, it is our responsibilities to be aware of laws and regulations pertaining to our stays. However, any current student understands that this is not easy and we'd like to do our best to help this process along for you. Here is our interpretation of the rules, processes and expectations along with what we hope are some useful websites.

If you are non-EU citizen don't forget to have your passport presented (in case of visa, you should get the stamp) at the border when you arrive! Avoid the hassle by asking the border guard to kindly stamp your passport!

EU citizens need to present a national ID.

The official source of the latest information regarding the documents required of foreign residents during their stay is always Ministarstvo unutarnjih poslova, the Croatian police ("MUP") whose main station is located at Petrinjska 30. Their telephone number is +385 1 45 63 623. You can find lots of helpful and the most up-to-date information on their website (www.mup.hr). (This is another website where the translate feature of Google can be very helpful!)

OIB

www.oib.hr

Shortly after arriving in Zagreb, you should get your national identity number "osobni identifikacijski broj – OIB"). You'll need this for many purposes including registering for classes in September. You can apply in-person at Tax Administration office, Avenija Dubrovnik 30, 10 000 Zagreb.

TEMPORARY RESIDENCE PERMIT

Be sure to check for info the latest on paperwork requirements and useful downloads on the portion of the MUP website pertaining to foreigners. The English version site is available at www.mup.hr/120009.aspx. Everything is quite well explained on the site but here's a summary of what you'll find. All foreign students staying in Croatia must obtain a "Temporary residence permit". The permission is valid for one year after which time, a renewal application is submitted. All applications can be submitted at MUP in Zagreb. All documentation must be in Croatian, using official translations when needed and none can be more than six months old.

The students, who need a visa for entry in Croatia, should submit the request to a respective Croatian diplomatic mission, while the students who do not need a visa, may submit their requests in the police station in Zagreb.

For additional information, a contact-person from Zagreb's Police Department is available at tel. +385 1 45 63 623.

While waiting for your permission to stay, you will be able to stay in Croatia legally on the visa. Be sure to check the Croatian visa requirements for your country. One month before the Permission expires, you'll need to be in Zagreb in order to resubmit similar documents and paperwork as in your initial application.

Something not mentioned on the pages of the MUP website but can be found in the "Aliens Act" which is available on the site for download, is that once you are the bearer of a Temporary residence permit, you will not be allowed to leave Croatia for more than 30 days at a time in order for your Permit to remain valid.

Another important piece of info that's not explicitly stated is that while you have a Temporary residence Permit, you will be required to participate in the Croatian National Health Plan.

Don't be surprised during your renewal application process when you're asked for a biljeg. This is a stamp that shows you've paid a small fee to the state for handling some paperwork. You can buy them at most Tisak news agents' stands. You'll need one at the tax office for your proof of having paid your health insurance and you'll also need one when submitting your application for renewal at MUP. It's a little tricky to know how to handle these as you may encounter that a price has changed from year to year and you'll only really know how much you owe once someone asks you for one. To be safe, check the MUP website for their current price of paperwork handling (they refer to it in English as a "revenue stamp") and arrive at MUP with a biljeg paper clipped to your application. In all other cases, wait until you're asked for one before dashing to the nearest Tisak.

PUBLIC TRANSPORTATION

The great thing about the city is how you can really get everywhere on foot! That being true, if you're not living in the immediate downtown or need to get out to the Jarun Lake or Maksimir Parks or just want to check out the tram system you might want to acquire a student tram pass. These passes are issued at any of the 13 Zagreb municipal transit system, Zagrebački električni tramvaj (ZET) and offices. The best bargain is with monthly or yearly pass. However if you are not ready for such a commitment you can get single or 24-hour tickets at a newsagent. In any case make sure you are covered because ZET controllers issue unpleasantly steep fines to riders without valid tickets.

There are three ways of public transportation in the City of Zageb – trams, buses and city railway. Zagreb Electric Tram (ZET, <u>www.zet.hr</u>) together with Croatian railway (<u>www.hz-net.hr</u>) conduct the public transport in Zagreb.

How to get a monthly or annual ticket ("pokaz") for Zagreb local transportation?- take a form for a monthly or annual ticket at one of the ZET main tram stations, such as at Borongaj final stop, at Remiza, Dubrava or in Marić passage which is close to Jelačić square, entrance from Gajeva or Praška - confirm the form containing a photo 3x3,5 cm in Students office at the Faculty - submit the confirmed form, "iksica" card and Students grade book "indeks" into one of the listed ZET offices to get your ticket printed. Issuing costs 30 kuna.

To get more information call ZET, phone: +385 1 36 51 478 or 36 51 479

Visit ZET website for useful information: http://www.zet.hr/

STUDENT RESTAURANTS so called "kantinas" or "mensas" (the student dining halls)

Meals, cafe, refreshments and cakes at affordable prices are served in student restaurants and cafeterias run by the Student Centre University of Zagreb. Services and offerings may vary in over 20 restaurants at various locations in the city, one of which is found at Faculty of Veterinary Medicine. The biggest student restaurant is located in the Student Centre, Savska 25.

At the time of publication, the kantina discount prices are available to students who have a Croatian or EU nationality, as being subsidized by Croatian ministry of science. These discount dining facilities will hopefully become available to all students of the faculty in the near future. Until then, you will have to pay a full price for meals at student restaurants; a complete meal will cost you approx. 20 HRK.

Internet at the Faculty of Veterinary Medicine

The Faculty of Veterinary Medicine is connected to the Internet by Croatian Academic and Research Network (CARNet). Computers can be used in the Library Reading Room and at student premises (Equus student club). Password is not needed for the access. Apart from those personal computers, there are computer classrooms which are mostly used for teaching. Undergraduate and graduate students are entitled to use public computers at the Faculty, to obtain their AAI@Edu.hr (EduRoam) identity (which is used as "electronic identity"), e-mail address as well as personal web page at the Faculty server. AAI@Edu.hr (EduRoam) electronic identity enables access at reduced price to a number of services, such as:

• scientific and research papers databases access (http://bib.irb.hr)

• CARNet public modem Internet access

• Mobile CARNet services (wireless Internet access powered by Vipnet service provider)

• XCARNet service (wireless access by B.net cable television network)

• MetroCARNet service (Metronet service provider)

Read more on the above listed services at http://www.carnet.hr and http://www.vef.hr/ict. A number of accessible services with e-identity has been constantly increasing.

Users account for listed services, AAI@Edu.hr identity and personal e-mail address can be obtained at IT Department (within the Library) by producing a studnet grade book ("Indeks") or student ID card ("X-card", "iksica").

EXAMS & OTHER ESSENTIALS

X-card

This is your official student ID card. For students with a Croatian and EU citizenship, this card also serves to provide discounts at students' restaurants and coffee shops ("kantinas"). During your first days in Zagreb you will have your photo taken (and it's the same photo you will have during the whole of your stay, so smile pretty!) and the card will be available approximately a week later.

LMS

This is the official communication site for all courses during all years of study. You'll be given a username and password during your first weeks here, so as soon as you can, log-on and get familiar with all its features. The administration regularly posts important announcements here and documents such as course outlines and schedules are

available for download. Some professors also provide course materials and use other interactive features of the site.

EMAIL

This is the official school email account: SquirrelMail. This account requires the same username and password as LMS. Some professors require you to use this address when contacting them and any new info posted to LMS routes an announcement here. If you already have an email address that you use and love, you may find it most convenient to re-route your SquirrelMail into your existing account.

Studomat

www.isvu.hr/studomat

Studomat is the website where all your information as a student is held and updated. The student ID number located on your indeks and x-card is the 'user name' you will use to log-in to this site.

All exam dates are posted on studomat. Students MUST "sign-up" here for their exams, usually 7 days in advance. Cancellations are also made via studomat and are usually allowed up until 3 days prior to the exam.

GRADE BOOK ("Indeks")

This thin, dark blue book is the permanent record of the classes in which you've been registered and the marks you've received at their completion. It is as essential as your passport: take good care of it! You'll need it in order to register for classes, to take your exams, to apply for your permission to stay, and any other time you need proof that you're a full time student (such as receiving the student rate for your tram pass).

Usually during the last few days of a course, students are required to present their indeks to the course co-ordinator for his or her signature. Obtaining this signature allows you to apply for the final exam. Eligibility for these signatures typically depends on class attendance and activities. When you pass an exam, the examiner fills in your grade and signs your indeks one more time. So remember to bring your indeks to both written and oral exams!

OTHER (HOPEFULLY) USEFUL INFORMATION

IMPORTANT TELEPHONE NUMBERS

In case of an emergency, Croatia has implemented Europe's wide **EMERGENCY NUMBER 112** which then transfers you to police, emergency or the fire department.

- 192 Police
- 194 Ambulance emergency
- 193 Fire department
- 1987 Road help
- 195 Search and rescue on the sea
- 18166 Weather forecast
- 18981 general info
- 11888 info about local and national telephone numbers
- 11802 info about international telephone numbers

Crime figures rank Zagreb and Croatia significantly lower than most of Europe. Anyhow, you should keep your eyes on your belongings at all time.

POST OFFICES

Jurišićeva 13; 4811-090 (Mon-Fri: 07 am – 20 pm; Sat: 07 am – 13 pm) Branimirova 4; 4981-300 (Mon-Sun: NON-STOP)

RENTAL ACCOMMODATIONS

It is always a good idea to search for information on social network pages and student groups where you can find rent offers and other students looking for a place to stay and roomate (njuskalo.hr, gohome.hr, very known is Facebook group: Erasmus Zagreb 2014/2015 Official Group, rentinzagreb.com, homeinzagreb.com, sublet.com, realitica.com). You can enter search terms like "najam stana u Zagrebu od 350 eura"). The approximate average prices You may expect:

- single room: 150-200EUR + charges

- flat: 350-600EUR + charges

PHARMACIES 0-24

Central Pharmacy, Jelačić square 3 Dubrava, Grižanska 4 Ilica, Ilica 301 Ozaljska, Ozaljska 1 Siget, Avenija Većeslava Holjevca 22

NATIONAL HOLIDAYS

National holidays are important to remember while living in Zagreb because, if for no other reason, you need to plan on most shops being closed and classes cancelled for that day. Be sure to ask your professors about changes to your schedule for courses that run during a holiday. January 1: New Years Day January 6: Epiphany Easter and Easter Monday Corpus Christi: 60 days after Easter May 1: International Workers Day June 22: Anti-Fascist Struggle Day August 5: Victory and Homeland Thanksgiving Day August 15: Assumption of Mary November 1: All Saints day November 18 Remembrance Day

December 25-26: Christmas - (University Christmas holidays 25.12.-6.1.)
