UNIVERSITY OF ZAGREB

Address:

University of Zagreb Trg Republike Hrvatske 14, Zagreb

Phone: +385 1 4564111 e-mail: unizginfo@unizg.hr

The University of Zagreb (Universitas Studiorum Zagrabiensis) is the biggest and the oldest university in Croatia as well as in South-East Europe. The university was founded in 1669 by King Leopold I who issued a decree granting the status and privileges of a university to the Jesuit Academy. The university now consists of 30 faculties, three art academies and the University Centre "Croatian Studies". Over 50.000 students attend study

programmes in fields of Biotechnology, Biomedicine, Social and Humanistic Sciences, Natural Sciences, Engineering and Arts. Complete information can be gotten at the University web site www.unizg.hr (Source: www.unizg.hr/homepage)

GENERAL FACTS ON FACULTY OF VETERINARY MEDICINE – ZAGREB

Source: Bregeš

Faculty of Veterinary Medicine, University of Zagreb was founded in 1919 as a four year college. On 7 December 1924 the school was renamed into the Faculty of Veterinary Medicine and it became a part of the University of Zagreb. Since then it has been the only faculty of that kind in the Republic of Croatia. The Faculty comprises a number of premises; lecture and teaching rooms, computer laboratories and laboratories and facilities where large and small animals are kept. Well equipped infrastructure provides conditions for scientific research, teaching as well as cooperation with the economic sector (agriculture, biotechnology, animal origin food production). Striving to achieve international high teaching standards the Faculty has been successfully evaluated by EAEVE (European Association for the Establishment of the Veterinary Education) since 2002. The changes appointed by the EAEVE expert team are included in the new curriculum. Study programme is aligned with the Bologna structure.

Also, all the ISO 9001 Bureau Veritas criteria concerning the quality control are met and Faculty possess its valid certificate.

Teaching, scientific and highly skilled activities of the Faculty are based on the work of departments and clinics integrated since academic year 2005/06 into four departments: Basic and Pre-clinical Sciences Division, Animal Production and Biotechnology Division, Clinical Division and Veterinary Public Health and Food Safety Division. The fifth department, Management, Chairs and Technical Services besides an office

manager and accounting, also include IT section, Central library as well as Chair of Foreign Languages and Chair of Physical Training.

Since the beginning of the academic year 2005/06 the Faculty of Veterinary Medicine of the University of Zagreb has been implementing the new curriculum entitled University study of Veterinary medicine. The study lasts for six years (12 semesters) – 360 ECTS points.

Experiences at and recommendations by a number of leading veterinary institutions of higher education in the world, particularly of the European Association of Establishments for Veterinary Education (EAEVE), were acknowledged in drafting the new curriculum. Most teaching such as lessons, seminars, practical work and other forms of consultations are performed within the Faculty tract situated in the south east Zagreb.

The premises include 12 buildings with teaching rooms, student practicum, laboratories and computer laboratories. Completely refurbished large lecture room with the most sophisticate equipment offers an opportunity for multimedia and teleconference presentations. Moreover, better working conditions have been achieved due to involment in a framework of IVSA-Croatia (International Veterinary Students Association) and Equus (Veterinary Medicine Student Association) activities by recently remade student premises.

European Association of Establishments for Veterinary Education (EAEVE) http://www.eaeve.org

GENERAL INFORMATION ABOUT THE PROPOSED STUDY PROGRAM

NAME OF THE STUDY PROGRAM

INTEGRATED UNDERGRADUATE AND GRADUATE UNIVERSITY STUDY OF VETERINARY MEDICINE IN ENGLISH

PROVIDER OF THE STUDY PROGRAM

FACULTY OF VETERINARY MEDICINE UNIVERSITY OF ZAGREB

TYPE OF THE STUDY PROGRAM

University study program

LEVEL OF THE STUDY PROGRAM

Integrated undergraduate and graduate study

ACADEMIC/PROFESSIONAL TITLE UPON COMPLETION OF THE STUDY

Doctor of veterinary medicine

SCIENTIFIC AREA OF THE STUDY PROGRAM

Area: Biomedicine and health, field: Veterinary medicine

DURATION OF THE STUDY PROGRAM AND MINIMUM NUMBER OF ECTS CREDITS

The study lasts 6 years or 12 semesters. For each completed year, a student earns 60 ECTS credits. Upon completion of the study, minimum of 360 ECTS credits are earned.

REASONS FOR STUDY IN ENGLISH

The fundamental reason for the promotion of organization and conduct of the study program in English lies in the need to provide a university study in veterinary medicine in English within the University of Zagreb and the Republic of Croatia. Initiation of the first university study of veterinary medicine in the English language in the Republic of Croatia occurs as response to a recognized need, and as preparation for global work environment, for the education of doctors of veterinary medicine in English. We believe that the establishment of the study in English is yet another contribution to the international recognition of the University and our Faculty and that it will prepare students for work in an open international market. Additional interest for enrolment in the study program at the Faculty of Veterinary Medicine in Zagreb comes from students from the non-EU countries and this interest rose especially after Croatia joined the EU.

The importance of starting the study program in English is also found in the regional integration with the European area of higher education (EHEA) since the Veterinary faculties in the region do not have studies in English. The realization of this set goal would position our Faculty as the leading institution of higher education in the region in the field of veterinary medicine. Establishment of the study in English in Croatia would ensure the competitiveness and distinctiveness of the program and a greater mobility of students and lecturers. The objective of the establishment of the aforementioned study is that its scientific and teaching activity primarily contributes to the development of Croatia, but also the region as a whole. The study is designed in a way that it meets the criteria of the curricula of the veterinary faculties which are carried out within the European Union and which are accredited by EAEVE.

The idea to initiate the study of veterinary medicine at the Faculty of Veterinary Medicine, Zagreb has matured for a number of years. Also, one of the reasons for starting the study in English is to encourage parallel conduct of studies in Croatian and English language in order to offer equal opportunities to local students to attend studies in Croatian and English, but also to attract foreign students from the Europe and other continents. The Faculty of Veterinary Medicine, University of Zagreb recognizes the fact that a large number of Croatian citizens and people of Croatian origin live abroad, and it therefore sees a great potential of academic involvement and launch of powerful mechanisms of international exchange and cooperation. By establishing the study in English, the Faculty of Veterinary Medicine will respond to the needs of Croatian citizens from the region and the world, who have in the last few years shown a steady interest in education at the Faculty of Veterinary Medicine in Zagreb. In addition to Croatian citizens who would like to study from the very beginning in the English language, there are a number of other interested groups.

Thus, the proposed program of study in English could be enrolled by:

- 1. Candidates who are BSc in natural or biomedical sciences;
- 2. Candidates who completed at least four years of secondary education abroad, in a country that has an *established* system of external evaluation of secondary education;
- 3. Candidates who passed internationally recognized SAT Reasoning Test;
- 4. High school graduates from the Republic of Croatia and Diaspora / international students with a high school diploma;
- 5. Foreign students using EU mobility program and other exchange programs (e.g. ERASMUS, CEEPUS, AUF and the like)
- 6. Students who wish to attend courses only in part of the academic year or who would like to attend an elective course.

Today, the Faculty is a public institution of higher education which, as a constituent part of the University of Zagreb (hereinafter: the University), organizes and implements university and vocational studies and develops scientific and professional work in the educational and scientific field of biomedicine and health care, the field of veterinary medicine. The Faculty is a legal entity entered into the Register of Higher Education Institutions and the Register of Scientific Research Legal Entities, kept by the Ministry of Science, Education and Sports of the Republic of Croatia. The current program of study is the fundamental in education in the field of veterinary medicine. We have formed the new program of study in English as a faithful copy of the program in the Croatian language. The number of core and elective courses and three study tracks are completely identical in both study programs.

The diploma is equivalent to the diploma received by students who complete the current Croatian degree program. The program in English has clearly expressed learning outcomes and described qualifications that are stated in the Diploma Supplement (DS).

The program is designed as a combination of basic courses, preclinical and clinical veterinary subjects, which provide a broad education to every doctor of veterinary medicine. During lectures, seminars/tutorials and practicals, students receive the necessary skills and techniques related to the selected studies in English, especially during seminars and practicals in which they acquire practical knowledge directly with the help of university teachers and prominent experts in veterinary practice. In order to easily master the work techniques and get quickly involved in the business practice and professional performance of tasks for which they have been preparing during the study, attention has been given to mandatory practical training of participants during the two final years of the study, which is carried out in appropriate facilities and institutions. This allows employers to meet potential employees while students can have easier insight into their own knowledge, skills and the actual preparation for entry into the world of modern veterinary practice. Upon enrolment in the fifth year of study, students have the option to choose between one of the three study tracks:

- 1. Small Companion Animals (SCA)
- 2. Farm Animals and Horses (FAH)
- 3. Veterinary Public Health (VPH)

The course content in the existing three study tracks within the study program covers numerous current gains and follows developmental dynamics that are distributed in the framework of various academic sub-disciplines. They are designed to encourage the real interest of students for one of the selected fields of veterinary profession as well as their creativity. The selected study track provides them with essential theoretical knowledge and all the essential practical applications and skills in each of the selected segments of veterinary activity, as well as activities that are associated with it. Particular emphasis is placed on building students' competencies through teamwork in small groups. Students thus actively learn how to solve problems, gain experience in team work and conduct of business.

Clinical teaching for all the assigned students starts from the 3rd year of study. Practical training in food hygiene and public health is ensured in slaughterhouses, markets, meat processing factories, dairies as well as laboratories. Laboratory skills, as well as principles of work safety in laboratories are taught from the first year onwards.

Continuous modernization of working and teaching spaces, laboratories and clinics resulted in an increased interest of foreign students, participants in postgraduate specialist studies and in the owners' selection of the Faculty as the location for the treatment of their companion animals and farm animals. The Faculty has so far become well-defined as a regionally recognizable institution in the field of education and professional-clinical work.

The current program of study which is now conducted in Croatian, received Accreditation for the conduct at the Faculty of Veterinary Medicine by the Ministry of Science, Education and Sports of the Republic of Croatia based on the prior positive opinion of the National Council for Higher Education.

Upon completion of the study at least 360 ECTS credits are earned. The study is conducted at the seat of the higher education institution in Vjekoslava Heinzela Street 55, 10 000 Zagreb. Academic degree is stated as: doctor of veterinary medicine. The occupation doctor of veterinary medicine in the Republic of Croatia belongs to the group of regulated professions, therefore the study program is largely harmonized with the provisions of Directive 2005/36/ EC, as well as the Law on regulated professions and recognition of foreign professional qualifications (OG124/09). Pursuant to the above mentioned, the Faculty determined that the study shall be carried out as integrated study, in one educational cycle of six years.

^{*}for students who want to enroll for more than the minimum of ECTS credits, the offer includes all elective courses from the entire study program

REGISTRATION AND EXAMINATION REQUIREMENTS SCHEME

I SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PHYSICS AND BIOPHYSICS	-	
MEDICAL CHEMISTRY	-	
ZOOLOGY	-	
BOTANY IN VETERINARY MEDICINE	-	
ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I	-	
ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE	-	
BASIC STATISTICS IN VETERINARY MEDICINE	-	
INTRODUCTION TO VETERINARY	-	
PHYSICAL EDUCATION	-	

II SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II	-	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I must be completed
BIOCHEMISTRY IN VETERINARY MEDICINE	Pending completion of the course MEDICAL CHEMISTRY*	MEDICAL CHEMISTRY must be completed
HISTOLOGY WITH GENERAL EMBRYOLOGY	-	
ANIMAL BREEDS CHARACTERISTICS	-	
INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY I.	-	
PHYSICAL EDUCATION	-	

^{*}All classes attended, but final exam(s) yet to be taken

III SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PHYSIOLOGY OF DOMESTIC ANIMALS I	MEDICAL CHEMISTRY must be completed	PHYSICS IN BIOPHYSICS, BIOCHEMISTRY IN VETERINARY MEDICINE, ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II, HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed
MOLECULAR BIOLOGY AND GENOMICS IN	BOTANY IN VETERINARY MEDICINE, MEDICAL CHEMISTRY, BIOCHEMISTRY IN	BOTANY IN VETERINARY MEDICINE, MEDICAL CHEMISTRY, and BIOCHEMISTRY IN VETERINARY

VETERINARY MEDICINE	VETERINARY MEDICINE and ZOOLOGY must be completed	MEDICINE and ZOOLOGY must be completed.
BASIC ANIMAL NUTRITION	MEDICAL CHEMISTRY must be completed.	MEDICAL CHEMISTRY must be completed.
ANIMAL BREEDING AND PRODUCTION	Pending completion of BASIC STATISTICS IN VETERINARY MEDICINE and ANIMAL BREEDS CHARACTERISTICS	
HYGIENE AND HOUSING OF ANIMALS	-	
VETERINARY IMMUNOLOGY	-	
ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III	-	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I and ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed.
INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY II	_	INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY I must be completed.

IV SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PHYSIOLOGY OF DOMESTIC ANIMALS II	Pending completion of PHYSIOLOGY OF DOMESTIC ANIMALS I*	PHYSIOLOGY OF DOMESTIC ANIMALS I must be completed.
APPLIED ANIMAL NUTRITION	Pending completion of BASIC ANIMAL NUTRITION*. BIOCHEMISTRY IN VETERINARY MEDICINE must be completed	BASIC ANIMAL NUTRITION and BIOCHEMISTRY IN VETERINARY MEDICINE must be completed.
ANIMAL BREEDING AND PRODUCTION	Pending completion of the course ANIMAL BREEDING AND PRODUCTION from the 3rd semester*	ANIMAL BREEDS CHARACTERISTICS and BASIC STATISTICS IN VETERINARY MEDICINE must be completed.
HYGIENE AND HOUSING OF ANIMALS	Pending completion of HYGIENE AND HOUSING OF ANIMALS from the 3rd semester*	ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE must be completed.
GENERAL MICROBIOLOGY	Pending completion of the course VETERINARY IMMUNOLOGY*	

^{*}All classes attended, but final exam(s) yet to be taken

V SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PARASITOLOGY AND PARASITIC DISEASES	PHYSIOLOGY OF DOMESTIC ANIMALS I., PHYSIOLOGY OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II, ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.	All compulsory courses from 1 st – 4 th semester must be completed.
GENERAL VETERINARY PATHOLOGY	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., HISTOLOGY WITH GENERAL EMBRYOLOGY, PHYSIOLOGY OF DOMESTIC ANIMALS I., and	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., HISTOLOGY WITH GENERAL

	PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.	EMBRYOLOGY, PHYSIOLOGY OF DOMESTIC ANIMALS I., and PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.
RADIATION HYGIENE	PHYSICS AND BIOPHYSICS and PHYSIOLOGY OF DOMESTIC ANIMALS I must be completed.	PHYSICS AND BIOPHYSICS and PHYSIOLOGY OF DOMESTIC ANIMALS I must be completed.
PATHOPHYSIOLOGY I	All first year courses must be completed and pending completion of the courses PHYSIOLOGY OF DOMESTIC ANIMALS I and PHYSIOLOGY OF DOMESTIC ANIMALS II*	PHYSIOLOGY OF DOMESTIC ANIMALS I and PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.
PHARMACOLOGY	All first year courses must be completed and pending completion of the courses PHYSIOLOGY OF DOMESTIC ANIMALS I. and PHYSIOLOGY OF DOMESTIC ANIMALS II.*	PHYSIOLOGY OF DOMESTIC ANIMALS I. and PHYSIOLOGY OF DOMESTIC ANIMALS II must be completed.
SPECIAL MICROBIOLOGY	VETERINARY IMMUNOLOGY and GENERAL MICROBIOLOGY must be completed.	VETERINARY IMMUNOLOGY and GENERAL MICROBIOLOGY must be completed.

^{*}All classes attended, but final exam(s) yet to be taken

VI SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
SPECIAL VETERINARY PATHOLOGY	Pending completion of GENERAL VETERINARY PATHOLOGY and passed midterms*	GENERAL VETERINARY PATHOLOGY must be completed.
PATHOPHYSIOLOGY II	Pending completion of the course PATHOPHYSIOLOGY I*	PATHOPHYSIOLOGY I must be completed.
CLINICAL PROPEDEUTICS	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III., and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.

^{*}All classes attended, but final exam(s) yet to be taken

VII SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
INTERNAL MEDICINE	Pending completion of CLINICAL PROPEDEUTICS.* SPECIAL VETERINARY PATHOLOGY must be completed.	SPECIAL VETERINARY PATHOLOGY and CLINICAL PROPEDEUTICS must be completed.
SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY I.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.
GENERAL AND CLINICAL RADIOLOGY	Pending completion of the course CLINICAL PROPAEDEUTIC, GENERAL VETERINARY PATHOLOGY and SPECIAL VETERINARY PATHOLOGY*.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.
GAME BREEDING AND MANAGEMENT	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.

*All classes attended, but final exam(s) yet to be taken

VIII SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II	Pending completion of the course SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY I from the 7th semester.*	SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY I must be completed.
OBSTETRICS AND REPRODUCTION I	SPECIAL VETERINARY PATHOLOGY and CLINICAL PROPAEDEUTIC must be completed.	SPECIAL VETERINARY PATHOLOGY and CLINICAL PROPAEDEUTIC must be completed.
BIOLOGY AND PATHOLOGY OF BENEFICIAL INSECTS	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.
BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, PHARMACOLOGY, SPECIAL MICROBIOLOGY must be completed.
TOXICOLOGY	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY, PATHOPHYSIOLOGY I, PATHOPHYSIOLOGY II, PHARMACOLOGY must be completed.	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY, PATHOPHYSIOLOGY I, PATHOPHYSIOLOGY II, PHARMACOLOGY must be completed.
METHODS OF PHYSICAL THERAPY AND DIAGNOSTICS	Pending completion of the course GENERAL AND CLINICAL RADIOLOGY, GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY.*	GENERAL VETERINARY PATHOLOGY, SPECIAL VETERINARY PATHOLOGY must be completed.

^{*}All classes attended, but final exam(s) yet to be taken

IX SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees		
INFECTIOUS DISEASES OF DOMESTIC ANIMALS	All courses from years 1 to 3 must be completed, with attendance of the 4th year courses.	-		
SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY III	Pending completion of the course SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II in the 8 th semester.*	SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II must be completed.		
OBSTETRICS AND REPRODUCTION II	Pending completion of the course OBSTETRICS AND REPRODUCTION I in the 8 th semester.*	OBSTETRICS AND REPRODUCTION I must be completed.		
FOOD HYGIENE AND TECHNOLOGY	All courses from years 1 to 3 must be completed, with attendance of the 4th year courses and examinations passed in the following subjects: INTERNAL MEDICINE (7th semester) AND GAME BREEDING AND MANAGEMENT (7th semester)	-		
VETERINARY EPIDEMIOLOGY	Pending completion of the course INTERNAL MEDICINE and OBSTETRICS AND REPRODUCTION I.*	-		

^{*}All classes attended, but final exam(s) yet to be taken

X SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees	
INFECTIOUS DISEASES OF DOMESTIC ANIMALS	Pending completion of the course INFECTIOUS DISEASES OF DOMESTIC ANIMALS in the 9 th semester	INTERNAL MEDICINE must be completed.	
STATE VETERINARY MEDICINE	Pending completion of the course INFECTIOUS DISEASES OF DOMESTIC ANIMALS in the 9 th semester	All courses in which students have enrolled must be completed.	
FOOD HYGIENE AND TECHNOLOGY	Pending completion of the course FOOD HYGIENE AND TECHNOLOGY in the 9 th semester	All courses in years 1-4 must be completed.	
FIELD SERVICE CLINIC	All subjects in 1st to 9th semester must have been attended, and the examinations passed in the following subjects: OBSTETRICS AND REPRODUCTION I and SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II	-	

XI SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
FORENSIC VETERINARY MEDICINE	Pending completion of the course STATE VETERINARY MEDICINE.*	All courses in which students have enrolled must be completed.
POULTRY DISEASES	Pending completion of the course INFECTIOUS DISEASES OF DOMESTIC ANIMALS.*	INFECTIOUS DISEASES OF DOMESTIC ANIMALS must be completed.
HERD HEALTH	All courses from years 1 through 5 must be completed.	-
VETERINARY ECONOMICS	Pending completion of the course VETERINARY EPIDEMIOLOGY.*	VETERINARY EPIDEMIOLOGY must be completed.
FIELD SERVICE CLINIC	Positive grade of the course Field Service Clinic must be obtained; pending completion of all clinical courses.	-

XII SEMESTER

SUBJECT	Registration requirements for partial-year enrolees	Examination requirements for full- year and partial-year enrolees
PROFESSIONAL CLINICAL WORK	Pending completion of all courses.	
PROFESSIONAL FIELD WORK	Pending completion of all courses.	
WRITING A MASTER'S THESIS	Pending completion of all courses.	

REGISTRATION AND EXAMINATION REQUIREMENTS FOR STUDY TRACK RELATED ELECTIVE COURSES AND ELECTIVE COURSES

SUBJECT	Registration requirements	Examination requirements		
ADVANCED DIAGNOSTICS AND THERAPY OF THE DISEASES OF THE DIGESTIVE SYSTEM OF DOGS AND CATS	Maximum number of students: 35			
ANATOMY OF LABORATORY ANIMALS	Maximum number of students: 30			
	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed.			
ARCHAEOZOOLOGY	Pending completion of ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH		
	Priority will be given to students who have passed their pre-qualification exams with a grade od very good or excellent when enrolling into a course.	ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed.		
	Maximum number of students: 20			
AUTOCHTHONOUS DAIRY PRODUCTS	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY		
BIOLOGY AND CONSERVATION OF MARINE MAMMALS	Maximum number of students: 30			
CARCASS QUALITY AT THE SLAUGHTER LINE	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY		
CLINICAL ANATOMY	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II, ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II, ANATOMY WITH		
	Students who passed the examinations required for enrolment with grades 4 or 5 (very good or excellent) will have priority for enrolment	ORGANOGENESIS OF DOMESTIC ANIMALS III and HISTOLOGY WITH GENERAL EMBRYOLOGY must be completed.		
	Maximum number of students: 30			
COMPARATIVE ANATOMY OF SKELETAL SYSTEM	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II must be completed.	ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I., ANATOMY WITH ORGANOGENESIS OF		
	Maximum number of students: 20	DOMESTIC ANIMALS II must be completed.		

DISEASES OF HONEYBEES IN CONTEMPORARY PRODUCTION	BIOLOGY AND PATHOLOGY OF BENEFICIAL INSECTS must be completed.	BIOLOGY AND PATHOLOGY OF BENEFICIAL INSECTS must be completed.
	Maximum number of students: 25	
DISEASES AND TREATMENT OF DOGS AND CATS I	Internal Medicine, Surgery, Orthopaedics and Ophthalmology II, General and Clinical Radiology, Toxicology, Obstetrics and Reproduction I must be completed.	SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY III must be completed.
DISEASES AND TREATMENT OF DOGS AND CATS II	Pending completion of DISEASES AND TREATMENT OF DOGS AND CATS I. OBSTETRICS AND REPRODUCTION II must be	DISEASES AND TREATMENT OF DOGS AND CATS I must be completed.
	completed.	
EMERGING INFECTIOUS DISEASES		INFECTIOUS DISEASES OF DOMESTIC ANIMALS must be completed.
ENGLISH FOR ACADEMIC PURPOSES I	Maximum number of students: 35	
ENGLISH FOR ACADEMIC PURPOSES II	Maximum number of students: 35	
FISH MORPHOLOGY	Pending completion of the course BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS. Maximum number of students: 30	BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed.
FISHERY	BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed.	BIOLOGY AND PATHOLOGY OF AQUATIC ORGANISMS must be completed.
ECOD LINCOLENIE AND	Maximum number of students: 5	made so completed.
FOOD HYGIENE AND QUALITY CONTROL	All courses in years 1 to 3 must be completed, and all 4th year courses attended	FOOD HYGIENE AND TECHNOLOGY must be completed.
FUNDAMENTALS OF AGRONOMY	ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE must be completed with a minimal grade of very good (4).	
	Maximum number of students: 3	
HYGIENE AND QUALITY OF FISH MEAT	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY
HYGIENE AND QUALITY OF POULTRY MEAT	Enrolled in the Veterinary Public Health Study Track	Pending completion of FOOD HYGIENE AND TECHNOLOGY
PARASITIC ZOONOTIC DISEASES	Examination requirements: all courses in years 1 to 2 must be completed; fulfilled criteria for signature in the grade book and completed progress tests. Maximum number of students: 20	PARASITOLOGY AND PARASITIC DISEASES must be completed.
	Maximum number of students: 30 Pending completion of the course ANATOMY WITH	
REPTILE MORPHOLOGY ORGANOGENESIS OF DOMESTIC ANIMALS I, ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS II and HISTOLOGY WITH GENERAL EMBRYOLOGY.		
		I

PIGEON KEEPING AND BREEDING	ENVIRONMENT, ANIMAL BEHAVIOUR AND WELFARE AND HYGIENE AND HOUSING OF ANIMALS must be completed with an average grade which is higher than 3.5 in the above mentioned subjects. Maximum number of students:3		
SPECIFIC ANATOMICAL STRUCTURES OF THE LOCOMOTOR APPARATUS OF THE HORSE	Pending completion of the course ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I Maximum number of students: 20		
VETERINARY CYTOLOGY	Requirement for enrolment in this subject: a grade average of 4 or higher in subjects already passed at the time of enrolment. Maximum number of students: 35		
VETERINARY CLINICAL MICROBIOLOGY	GENERAL MICROBIOLOGY, SPECIAL MICROBIOLOGY and VETERINARY IMMUNOLOGY must be completed with an average grade which is higher than 3.5 in the above mentioned subjects.	GENERAL MICROBIOLOGY, SPECIAL MICROBIOLOGY and VETERINARY IMMUNOLOGY must be completed.	
	Maximum number of students: 10	ECOD LINGUENE AND	
VETERINARY LEGISLATION AND FOOD SAFETY CONTROL	All courses in years 1 to 3 must be completed, and all 4th year courses attended	FOOD HYGIENE AND TECHNOLOGY must be completed.	
VETERINARY CLINICAL PATHOLOGY	INTERNAL MEDICINE must be completed. Maximum number of students: 32	INTERNAL MEDICINE must be completed.	
VETERINARY EMERGENCY AND CRITICAL CARE MEDICINE	Maximum number of students: 35		
VETERINARY PUBLIC HEALTH	All courses from years 1 to 4 must be completed, with attendance of the 5th year courses.	FOOD HYGIENE AND TECHNOLOGY, FOOD HYGIENE AND QUALITY CONTROL, VETERINARY LEGISLATION AND FOOD SAFETY CONTROL must be completed.	
VETERINARY LEGISLATION AND FOOD SAFETY CONTROL	All courses from years 1 to 3 must be completed, with attendance of the 4th year courses.	FOOD HYGIENE AND TECHNOLOGY must be completed.	
ZOONOSES		INFECTIOUS DISEASES OF DOMESTIC ANIMALS must be completed.	

^{*}All classes attended, but final exam(s) yet to be taken

ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS I

1. GENERAL INFORMATION					
1.1. Course teacher	Assist. Prof. Ivan Alić	1.6. Year of the study programme	1 st year, 1 st semester		
1.2. Name of the course	Anatomy with organogenesis of domestic animals I	1.7. Credits (ECTS)	7		
1.3. Associate teachers	Prof. Srebrenka Nejedli; Prof. Tajana Trbojević Vukičević; Prof. Martina Đuras, Assist. Prof. Mirela Pavić; Assist. Denis Leiner, DVM; Assist. Kim Korpes, DVM; Assist. Magdalena Kolenc, DVM, Assist. Ante Plećaš, DVM	1.8. Type of instruction (number of hours L+S+E+e- learning)	18 L + 64 E		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course			
1.5. Status of the course	Compulsory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	VEF-LMS		
2. COURSE DESCRIF	TION	,			
2.1. Course objectives	The course presents the gr development of organs and in order to ensure basic kn pathology and clinical cour	d organic systems to vete owledge for other discipl	erinary medicine students		
2.2. Course enrolment requirements and entry competences required for the course	The course is taught to first-year veterinary medicine students during the first semester. Non enrolment requirements or entry competences are required.				
2.3. Learning outcomes at the level of the programme to which the course contributes	Following successful completion of the course, students will be able to apply acquired knowledge on gross anatomy and development of the thoracic and pelvic limbs of domestic mammals during preclinical and clinical courses.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Following successful completion of the course, students will be able to: list and describe major anatomical structures of the thoracic and pelvic limbs of domestic mammals explain the development of the thoracic and pelvic limb structures apply anatomical nomenclature skilled communicate anatomical information 				

	5 utilize d	lissection	skille			
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Lectures: 1. Introduction and anatomical nomenclature (1 hour), 2. General anatomy of the locomotor apparatus and basic angiology (1 hour), 3. General anatomy of the nervous system (1 hour), 4. Basic arthrolology (2 hours), 5. Skeleton and joints of the thoracic limb (2 hours), 6. Development of the muscular tissue (1 hour), 7. Extrinsic musculature of the thoracic limb (1 hour), 8. Intrinsic musculature of the thoracic limb (1 hour), 9. Blood vessels, nerves and lymph nodes of the thoracic limb (1 hour), 10. Skeleton and joints of the pelvic limb (1 hour), 11. Extrinsic and intrinsic musculature of the pelvic limb (2 hours), 12. Blood vessels, nerves and lymph nodes of the pelvic limb (1 hour), 13. Distal digital organ (2 hours) Practicals: 1. Directional terms and planes of the animal body (1 hour), 2. Skeleton of the thoracic limb (10 hours), 3. Regions and fasciae of the thoracic limb (1 hour), 4. Girdle muscles of the thoracic limb (4 hours), 5. Muscles of the shoulder joint (3 hours), 6. Muscles of the elbow joint (2 hours), 7. Axilla (3 hours), 8. Muscles of the radioulnar joints, carpal joint and joints of the digits (3 hours), 9. Blood vessels, nerves and lymph nodes of the thoracic limb (3 hours), 10. Joints of the thoracic limb (3 hours), 11. Skeleton of the pelvic limb (8 hours), 12. Regions and fasciae of the pelvic limb (1 hour), 13. Girdle muscles of the pelvic limb (3 hours), 14. Muscles of the hip joint (4 hours), 15. Muscles of the stifle joint (2 hours), 16. Muscles of the tarsal joint and joints of the digits (5 hours), 17. Joints of the pelvic limb (3 hours), 18. Blood vessels, nerves and lymph nodes of the pelvic limb (3 hours), 19.

2.10. Grading and evaluating student work in class and at the final exam	Student requirements are defined in the Regulations on the Integrated Undergraduate and Graduate Study of Veterinary Medicine. Given the above, the student must acquire a minimum number of points from all assessment elements in order to take the final exam. A student can justifiably be absent from up to 50% of the lectures and 20% of the practicals. The course has 18 hours of lectures. The student has to attend at least 9 hours of lectures.				en the m all ean ne	

	The course has 64 hours of practicals. The student has to attend at least 51 hours of practicals.			
	Active participation in the practicals is evaluated through short oral testing during practicals and is graded with 10 points in total. The student has to achieve at least 5 points.			
	Oral exam is graded with 40 points in total. The student has to achieve at least 24 points at the oral exam.

1.5.Status of the course	Compulsory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	VEF-LMS
2. COURSE DESC	RIPTION	<u> </u>	
2.1.Course objectives	The course presents the gross anatomy of domestic animals with embryonic development of organs and organic systems to veterinary medicine students in order to ensure basic knowledge for other disciplines such as physiology, pathology and clinical courses.		
2.2.Course enrolment requirements and entry competences required for the course 2.3.Learning outcomes at the level of the	Following successful completion of the course, students will be able to apply acquired knowledge on gross anatomy and development of the trunk including the viscera during preclinical and clinical courses.		
programme to which the course contributes	and viscora during produnical and durical courses.		
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Following successful completion of the course, students will be able to: 1. list and describe major anatomical structures of the trunk including the viscera of domestic mammals 2. explain the development of the viscera 3. apply anatomical nomenclature 4. skilled communicate anatomical information 5. utilize dissection skills		
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Lectures: 1. Skeleton of the trunk: structure and development (1 hour), 2. Body cavities and their serous lining (2 hours), 3. Heart: structure and development (3 hours), 4. Lungs: structure and development (1 hour), 5. Digestive system: structure and development (4 hours), 6. Urinary and genital organs: structure and development (4 hours), 7. Mammary gland: structure and development (2 hours), 9. Blood vessels, nerves and lymphatic nodes of the trunk and viscera (3 hours) Practicals: 1. Skeleton of the trunk (thoracic, lumbar and caudal vertebrae, ribs, sternum) (5 hours), 2. Regions of the trunk (2 hours), 3. Mammary gland (4 hours), 4.		

	Respiratory muscles (except diaphragm) (4 hours), 5. Thoracic and pectoral cavities, pleurae and pleural cavities (3 hours), 6. Trachea and lungs (5 hours), 7. Thymus, oesophagus, phrenic nerve, vagal nerve, sympathetic trunk (7 hours), 8. Pericardium and the heart (10 hours), 9. Blood vessels in the pectoral cavity (6 hours), 10. Transversus thoracis muscle, longus colli muscle, diaphragm (5 hours), 11. Abdominal wall, inguinal canal, external male genital organs (10 hours), 12. Peritoneum (3 hours), 13. Intestine (6 hours), 14. Stomach (5 hours), 15. Liver and pancreas (4 hours), 16. Spleen, abdominal aorta, caudal vena cava, portal vein, nervous system of the abdominal cavity (5 hours), 17. Urinary system and adrenal gland (4 hours), 18. Female genital organs (4 hours), 19. Pelvic cavity, accessory genital glands, rectum, internal iliac artery (4 hours), 20. Muscles of the back (4 hours).

credits is equal to the ECTS value of	Tests	2.56	Oral exam	3.2	(other)	
the course)	Written exam		Project		(other)	
2.10. Grading and evaluating student work in class and at the final exam	Student requirements are defined in the Regulations on the Integrated Undergraduate and Graduate Study of Veterinary Medicine. Given the above, the student must acquire a minimum number of points from all assessment elements in order to take the final exam. A student can justifiably be absent from up to 50% of the lectures and 20% of the practicals The course has 20 hours of lectures. The student has to attend at least 10 hours of lectures. The course has 100 hours of practicals. The student has to attend at least 80 hours of practicals. Active participation in the practicals is evaluated through short oral testing during practicals and is graded with 10 points in total. The student has to achieve at least 5 points. Oral exam is graded with 40 points in total. The student has to achieve at least					
	24 points at the oral exam.					

	Type of activity	Minimum number of points		um number points

	⊠ field						
	work						
	Student obligations are defined with the Regulations on the integrated						
	undergraduat	e and graduate study of veterina	ry medicine. From total 100 points,				
	student must acquire a minimum number of points from all elements of assessment						
	in order to pass the subject. The final grade is based on the sum of points (scores).						
	The scoring of individual elements of assessment:						
	Attending lectures and e – learning; a total of 6 points (the lowest number of points						
	that a student should gain from this element is 3 points).						
2.8.Student	Attending ser	ninars; a total of 6 points (the low	est number of points that a student				
responsibilities	should gain from this element is 4,8 points).						
	During the s	eminar, students must do plan	ned seminar thematic unit. Each				
	successful se	minar unit brings 0,25 points. Dur	ring the first to fourth (1st - 4th) and				
	fifth (5th - e-	-learning) seminar (e-learning), s	students will again self-check their				
	knowledge ba	ased on LMS system questions, a	t the end of each lesson, according				
	to the themat	tic units. If successful, each self-	check with more than 50% correct				
	answers bring	gs 0,75 points. Students will have	e a chance to be active participants				
	during every seminar and earn 0,5 points by answering guestions orally.						

Attending practicals: a total of 6 points - the lowest number of points that a student should gain from this element is 4,8 points. During shift classes students must do 12 planned exercises. If successful, each exercise brings 0,25 points. During the 2nd to 4th, 6th to 9th and 11th to 14th (e-learning) practicals, students will, at the end of each lesson, self-check their knowledge based on questions in LMS system, according to the thematic unit of the practical. Each successful self-check, with more than 50% of correct answers, brings you 0,5 points in activity. Students will have a chance to be active participants during every practical and earn 0,5 points by answering questions orally.

Students who did not participate in practicals or seminars do not have the right to do a practicals and seminar self-checks. They only have the right to compensate the missed seminar and practicals date.

During the term students need to achieve a minimum of 5 points (different combinations in solving programme exercises, self-checks, oral results interpretations / oral exams). The maximum number of points for this grading element is 10

Continuous knowledge checking (colloquia); a total of 32 points (the lowest number of points that a student should gain from this element is 20 points); during the course 3 colloquia will be organised - the first (1st) has a total of 12 points and a student should gain at least 58% (7 points), while the other two the 2nd and the 3rd have 10 points each and a student should gain at least 65% (6.5 points) od each colloquium. Final exam -written form on LMS platform; a total of 40 points (the lowest number of points that student should gain from this element is 24 points).

2.9.Screening
student work (name
the proportion of
ECTS credits for
each activity so that
the total number of
ECTS credits is
equal to the ECTS
value of the course
)

2.10. Grading and evaluating student work in class and at the final exam

The final grade is based on the total sum of the points from all of elements of assessment (attendance of lectures, seminars, exercises and e-learning; practical / individual work on tasks, colloquia and final exam). The evaluation is carried out according to the distribution below. The final score is expressed quantitatively, with points and adequate grade, from 1 to 5. Students who have not passed the item shall be rated as unsatisfactory (with grade one - F).

	Points		Grade				
	do 59		1 (F)				
	60-68		2 (E)				
	69-76		2 (D)				
	77-84		3 (C)				
	85-92		4 (B)				
	93-100		5 (A)

BASIC STATISTICS IN VETERINARY MEDICINE

1. GENERAL INFO	ORMATION				
1.1. Course teacher	Assistant Professor Maja Maurić Maljković, DVM, PhD,	1.6. Year of the study programme	1st		
1.2. Name of the course	Basic statistics in veterinary medicine	1.7. Credits (ECTS)	2,5		
1.3. Associate teachers	Full Professor Velimir Sušić, DVM, PhD Full Professor Anamaria Ekert Kabalin, DVM, PhD, Associate Professor Sven Menčik, DVM, PhD Ivan Vlahek, DVM, PhD Aneta Piplica, DVM	1.8. Type of instruction (number of hours L+S+ E+e-learning)	8 (L) + 0 (S) + 16 (E) + 6 (e-learning)		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course	-		
1.5. Status of the course	Compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	20%		
2. COUSE DESCR	RIPTION				
2.1. Course objectives	Adoption of facts about the significance of statistics for veterinary profession, getting theoretical and practical skills necessary for optimal planning and performing statistical observation, as well as data analysis and concluding about principles of events in veterinary medicine. Students will learn about different software system with the aim of achieving new skills related to different program environments during the statistical analysis				
2.2. Course enrolment requirements and entry competences required for the course	-				
2.3. Learning outcomes at the level of the programme to which the course contributes	Acquiring knowledge about the collection, processing and presentation of statistical data sets and their analysis and interpretation. Hypothesis, their evaluation and testing in veterinary medicine. Criteria for the selection of individual tests. Interdependence of characteristics and the possibility of their application in veterinary medicine.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes) 2.5. Course	After successful completion of the course the student will be able to: - identify the types of variables, - interpret the results of basic statistical data processing and analysis, - determine the normality of variables, - select the test to verify the hypothesis, - determine the correlation between two or more variables - familiarize with programming environments for statistical analysis Methodological unit / course content Class schedule				
content broken down in detail by weekly class schedule (syllabus)			(lectures + exercises + e-learning)

2.8. Student responsibilities	Student obligations are defined with the Regulations on the integrated undergraduate and graduate study of veterinary medicine. Given the above, the student must acquire a minimum number of points from all elements of assessment in order to pass the subject. The final grade is based on the sum of points (scores). The scoring of individual elements of assessment: - Attending lectures and e - learning: a total of 6 points. The lowest number of points that a student should gain from this element is 3 points. - Attendance exercises: a total of 12 points. The lowest number of points that a				
	student should gain from this elem				

	 Active participation in exercises (solving and interpretation of tasks): a total of 10 points (the minimum number of credits that a student should gain from this element is 5 points). During the term students have to fulfil the given assignments in eight programme exercises regarding the input, analysis and saving data. Each successful exercise or task earns them 0,5 points. During the periods of the second (2nd) to the seventh (7th) exercise, the students 						
	will have to do a self-check exam based on five questions in the LMS Syste according to the given exercise topic. Each successful self-check exercise was more than 50% of correct answers earns them 0,5 points. - During oral examination revision periods, as well as after every finished exercise tudents are allowed to interpret the given results and can get another extra period there. For the successful task completion and independent data analysis us Microsoft Excel students can earn another point. - During the term students need to achieve a minimum of 5 points (differ combinations in solving programme exercises, self-checks, oral resinterpretations / oral exams). A maximum number of points here is 10. - Continuous knowledge checking (colloquia): a total of 32 points (the minimal number of credits that a student should gain from this element is 20 points). During the term at the beginning of the regular exercise hours there will be organized for (4) colloquia as a written assessment of knowledge. Each of the colloquia carries a points, student must successfully solve at least 50% to achieve a minimum of points. From all the colloquia student must achieve at least 20 points. - Final exam: a total of 40 points (the lowest number of points that a student should gain from this element is 24 points)						exercise, xtra point sis using (different I results minimum s). BIOCHEMISTRY IN VETERINARY MEDICINE

1. GENERAL INFORM	MATION					
1.1. Course teacher	Full Prof. Renata Barić- Rafaj	1.6.Year of the study programme	first			
1.2. Name of the course	Biochemistry in Veterinary Medicine	1.7.Credits (ECTS)	7.5			
1.3.Associate teachers	Dr. sc. Josipa Kuleš	1.8.Type of instruction (number of hours L + S + E + e-learning)	31+ 12 + 29			
1.4.Study programme (undergraduate, graduate, integrated)	integrated	1.9.Expected enrolment in the course				
1.5.Status of the course	obligatory	1.10.Level of application of elearning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRIPT						
2.1.Course objectives	Objective of studying biochemistry is exploring the structure and function of the body. Modern biochemistry is in constant interaction with medicine, so the acquisition of knowledge about the biochemical and energetic changes and the regulation of metabolic processes in the body of healthy animals provides a biochemical basis for understanding the physiological processes, as well as the basis for understanding the consequences of disorders of metabolic pathways. Management of certain metabolic processes or change their courses according to our needs and goals is possible only with a good knowledge of biochemical pathways. During practical work in the lab, students will learn about the principles of individual techniques used in the laboratory.					
2.2.Course enrolment requirements and entry competences required for the course 2.3.Learning	attendance in Medical Chemistry general understanding of the biochemical principles, the major metabolic					
outcomes at the level of the programme to which the course contributes	pathways, as well as their regulation					
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successfully passing the course student will be able to: - to define the structure of most proteins, carbohydrates and fats in the body, and the importance of certain types of chemical bonds in metabolic processes - to explain the correlation of structure and main function of most proteins, carbohydrates and fats - to show the sequence of biochemical changes in the major metabolic pathways, explain the effect of the major enzyme systems in catalysis of certain reactions - to analyse the ways of regulation of biological activity					

	to apply a simple biochemical methods for measuring analytes in biological samples to understand the connection of metabolic pathways and accept the theoretical basis for the selection and evaluation to the results of varuous laboratory measurements to understand changing of metabolic pathways using various treatment procedures.					
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Lectures: 1 Aminoacids, 2. Protein structure, 3 Enzymes, 4. Hemoglobin, 5. Collagen, Basics of cell signaling, 6. Metabolism, ATP 7. Glycolysis, 8. Gluconeogenesis, Glycogen 9. Citric acid cycle 10. Oxidative Phosphorylation 11. Pentose phosphate pathway, 12. Lipids: 13. Urea cycle, 14. Integration of metabolism Seminars: 1 Posttranslational modification of amino acids, 2. Plasma proteins, 3. Michaelis-Menten kinetics, 4. Metabolism of hemoglobin, 5. Anaerobic glycolysis, 6. Inhibitors of oxidative phosphorylation, 7. Vitamins, 8. Glutathione, 9. cAMP, 10. Ketone bodies, 11. Specific derivats of aminoacids, 12. Integration of metabolism Exercises: 1 Isolation methods 2. BOTANY IN VETERINARY MEDICINE

1. GENERAL INFO	RMATION				
1.1. Course teacher	Full prof. Maja Popović, PhD	1.6. Year of the study programme	1st (first)		
1.2. Name of the course	Botany in veterinary medicine	1.7. Credits (ECTS)	1,5 ECTS		
1.3. Associate teachers	Full prof. Ksenija Vlahović, PhD Full prof. Maja Popović, PhD; Full prof. Damir Žubčić, PhD; Prof. Josip Kusak, PhD; Prof. Tomislav Gomerčić, PhD; Prof. Hrvoje Valpotić, PhD; Assistant prof. Daniel Špoljarić, PhD; Assistant prof. Andreja Prevendar Crnić, PhD;	1.8. Type of instruction (number of hours L+ S+E+e-learning)	10+0+10		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course			
1.5. Status of the course	Compulsory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCR	IPTION	()			
2.1. Course objectives	Students will be able to distinguish basic systematic categories of plants important for veterinary medicine. They will be able to recognise mutual dependence of pants and animals within the whole ecosystem. They will get acquainted with morphologic basis of fodder plants from plough-fields and grasslands. They will be aware of medicine plants groups as well of plants poisonous for animals. They could get required information on plants important in veterinary medicine using				
2.2. Course enrolment requirements and entry competences required for the course	botanic literature and data ba				
2.3. Learning outcomes at the level of the programme to which the course contributes	The course contributes to higher competences in the field of animal breeding. Assisted reproductive technologies like Artificial insemination, Superovulation, In vitro Fertilization, Embryo Transfer have been introduced to overcome reproductive problems, to increase the offspring from selected female's and to reduce the generation intervals in farm animals. This advanced reproductive technologies provides a powerful tool for rapid change in animal population, genetically. As this technologies will play an important role in future perspective for efficient reproductive performance in livestock, this course presents an important part in education of new generation of students.				
2.4. Learning outcomes expected at the	The expected outcomes are: After successful completion o 1. Compare the structure of p	f the course the student

web pages. Lecturers and assistants which will hold the lessons, the way of taking the exam and examination standards for the course "Botany in veterinary medicine" in autumn semester are being defined as follows:

- 1 attending lectures
- 2 attending exercises
- 3.participation at exercises and seminars
- 4 continuous knowledge checking
- 5 final exam

During the session for the "Botany in veterinary medicine" course the student must attend 5 lecture lessons in order to gain 3 minimal points. The maximum gained number of points from this evaluation element is 6 points.

During the session student must attend 8 exercise lessons in order to gain 8 minimal points during the semester. The maximum gained number of points from this evaluation element is 12 points.

During the session at the time of exercises student must do provided tasks from 5 programming exercises and for a completed task she/he gets a signature from the lecturer. Each well done and signed programming exercise is worth 1.4 points. For programming exercises in practicum a student can gain total of 7 points for 5 programme exercises. After a field work lesson (there are 2 field work lessons planned) a student gains 1.5 points if she/he wrote and /or collected predetermined materials. For two positive oral answers during the exercises student gains additional 1.5 points. During the session student must gain total of 5 points in order to have the minimal number of 5 points. Maximal number of points gained from this evaluation element is 10.

During the session 4 preliminary exams will be organized at the time of exercises each of them consisting 5 tasks or questions. Each correctly done task or well answered question is worth 1 point. In context of this evaluation element it is possible to gain the maximum of 20 points. Student must gain total of 13 points from the preliminary exams in order to gain minimum of 20 points. The total gained number of points from this evaluation element is 32 points. Student who does not gain minimum of 13 points during the session has right to take a makeup preliminary exam which will comprise material from all programming exercises and will be organized upon completion of the teaching in the session. Total number of points at the preliminary exam is 20. Student who does the makeup exam with better-than 50% results has right to take the final exam.

The final exam starts with a student's short analysis of results gained from the first four types of activities of attending lecture. Questions in the final exam will be put in a way that a student can answer in writing. The maximum number of points that can be gained from the final exam is 60 points, where 1 point = 1 correct answer (60 questions = 60 points). Student must show at least a sufficient knowledge at the final exam, with no regard to gained number of points from the first four evaluation elements, which could be higher than 36. The minimal number of points a student must gain at the final exam is 36 in order to gain minimal number of 24 points. In case a student does not satisfy at the final part of the exam, the lecturer determines time for reexamination.

Regardless of a fact that a student gained the number of points from the first four evaluation elements on the basis of makeup preliminary exam or not, the same rules are valid for forming the final mark. The final mark is formed on the basis of total sum from all five evaluation elements, according the following table:

2. COUSE DESCR	RIPTION				
2.1. Course objectives	The course is one of the basic subjects in preventive veterinary medicine, in which students will acquire due knowledge on the concept of animal behaviour and welfare, to ensure such conditions in practice in which the animal will express the behaviour characteristic of its species while feeling well itself. In addition, knowledge about the impact of ground and water on animal health condition, production and reproduction as well as about the influence of animals upon these environmental factors will be acquired in order to preserve proper bio ecologic relationships in the environment. This approach in presentation of particular topics meets the conditions necessary for full understanding and acquisition of knowledge in other courses in preventive veterinary medicine, primarily in the course "Hygiene and Housing of animals", included in further studies in semesters				
2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the	3 rd and 4 th . Understanding the concept of				
level of the programme to which the course contributes	Understanding of mutual impact of animals and environment (soil, water) in order to positive influence on animal health condition, production and reproduction as well as to preserve proper bio ecologic relationships in the environment				
2.4. 2. COUSE DESCRIPTION				
2.1. Course objectives	Histology is one of the basic subjects of the medical sciences; it studies the structure of human and animal bodies, which can be seen only with the help of optic aids. Etymologically, histology is a science that studies the tissues of a body. However, it explores the complete microscopic and submicroscopic system of the organism. During the study, students of veterinary medicine improve their knowledge from macroscopic anatomy and at the same time, they gain insight into the correlation between the structure and function of organs and organic systems. Knowledge of the normal structures is essential for the recognition of changes in the structure of the tissue, organs and organic systems. Embryology deals with the embryonic development and enables the understanding of complex interrelations in the body of an animal. It is also of practical importance since it explains the emergence of anomalies during development.			
2.2. Course enrolment requirements and entry competences required for the course	•			
2.3. Learning outcomes at the level of the programme to which the course contributes	This course builds on the knowledge acquired in the anatomy courses. Students will be able to identify, describe, connect, analyze, explain and integrate the macroscopic and microscopic structure of individual organs and systems. It is also the basis for understanding and linking the physiology, pathophysiology and pathology. Students will be able to explain the characteristics of individual cells and tissues that will give a further understanding of physiological, pathophysiological and pathological processes, which is a prerequisite for understanding the pathomorphological changes in the pathogenesis of diseases.			
2.4. Learning outcomes expected at the level of the course	By the end of this course the recognize and define the betissues and organs of animal	asic elements of the r		

(4 to 10 learning outcomes)

- -explain and compare the structure of certain organs in different animal species;
- -propose the necessary histological method of processing the sample;
- -independently cut off a piece of tissue and fix it correctly for the selected histological method;
- -use the microscope efficiently for the purpose of analysis and study of histological slides;
- -recognize and analyze the histological slides of various organs and tissues:
- -examine the relations between the structures and development of domestic animals

2.5. Course content broken down in detail by weekly class schedule

(syllabus)

1 Cytology (Cell components. Cell nucleus and nucleolus. Cytoplasm. Plasma membrane structure. Endocytosis and exocytosis through plasma membrane. Mitochondria. Ribosomes. Endoplasmic reticulum. Golgi complex. Lysosomes. Peroxisomes. Cytoplasmic skeleton and inclusions. Cell locomotion. Chemotaxis. Movements within cells. Cell death.) 2 Application of Histological methods (Basic principles of histology. Preparation of tissues for microscopic examination. Staining methods, routine staining and elective staining. Basic principles of histochemistry and cytochemistry. imunocytochemistry. Basic parts of the microscope, using microscope and interpretation of images. Artefacts.) 3 General embryology (Early stages of development in mammals and birds. Primordial germ cells. Spermatogenesis. Oogenesis. Fertilization. Cleavage of fertilized cells in domestic animals. Cleavage of fertilized cells in birds. Gastrulation. Differentiation of ectoderm, endoderm and mesoderm. Formation of Folding-off the embryo. notochord. Neurulation. Body formation. Malformations.). 4 Epithelial tissue (Basement membranes and basal lamina. Intercellular junctions. Specializations of the cell surface. Epithelium classification. Covering epithelia. Simple epithelium. Stratified epithelium. Transitional epithelium. Pseudostratified epithelium. Glandular epithelia cells features. Ultra structure of glandular epithelium cells. Ways of excretion. Monocellular glands. Multicellular glands. Simple glands. Complex glands. Alveolar glands. Tubular glands. Serous, mucous and mixed glands. Organization of large exocrine glands. Myoepithelial cells.). 5 Connective tissue (Ground substance. Types of collagen. Collagen biosynthesis and degradation. Collagen fibers. Reticular fibers. Elastic fibers. Dense and loose connective tissue. Mesenchymal cells. Fibroblasts and fibrocytes, White fatty cells. Brown fatty cells. Macrophages. Mononuclear phagocyte system. Other free cells of connective tissue) 6. Blood (Red blood cells. Neutrophil granulocytes. Eosinophil granulocytes. Basophile granulocytes. Lymphocytes. Monocytes. Blood platelets. Bone

marrow and hematopoiesis). 7 Supportive tissues (Hyaline cartilage. Elastic cartilage. Fibrocartilage. Microscopic structure of a bone. Bone cells. Bone matrix and collagen fibers. Periosteum and endosteum. Types of bone. Histogenesis of bone. Intramembranous ossification. Endochondral ossification. Growth and remodeling of bones. Joints.). 8 Muscle tissue (Smooth muscle features. Ultrastructure of smooth muscle cells. Ultrastructure of skeletal muscle fibers. Muscle fibrils. Sarcoplasmic reticulum. Mechanism of contraction. Organization of skeletal muscle. Cardiac muscle features. Cardiac muscle fibers. Proprioceptor system.). 9 Nerve tissue (Neuron. Neuron classification. Parts of neuron: perikaryon, dendrites, axons. Synapses. Cell neurology. Myelination. Myelinated nerve fibers. Unmyelinated nerve fibers. Spinal and vegetative ganglia. Nerve structure.) 10 Central nervous system (Histogenesis of the central nervous system. Meninges. Cerebrum. Cerebellum. Spinal cord.). 11 Eye and Ear (Photoreceptor system. Eye and accessory structures of the eye. External layer. Middle layer. Internal layer. Lens. Vitreous body. Conjunctiva. Eyelids. Lacrimal organs. Audioreceptor system. External ear. Middle ear. Internal ear. Vestibular organ.). 12 Endocrine system (Diffuse neuroendocrine system. Hypophysis development. Hypophysis structure: adenohypophysis and neurohypophysis. Hypophysis portal system. Epiphysis, Thyroid gland. Synthesis and hormone accumulation caused by activity of follicular cells. Epithelial corpuscles. Adrenal gland development. Adrenal gland structure: cortex and medulla. Islets of Langerhans). 13 Integumentary system. Skin and skin derivate. (Skin structure in domestic animals. Epidermis. Melanocytes. Langerhans' cells. Merkel's cells. Dermis. Subcutaneous tissue. Development of hairs. Hair structure. Skin characteristics based on animal species. Hair follicles. Tactile hairs. Mammary gland structure. Hoof. Claw. Horn. Skin in poultry. Feather. Somatic and visceral receptor system). 14 Digestive system (General structure of the digestive tract. Lips. Cheeks. Tongue and tongue papilla. Organ of taste. Hard palate. Soft palate. Teeth development. Brachyodont teeth. Hypsodont. Oropharynx. Esophagus. Glandular stomach. Cardiac gland region. Fundic gland region. Pyloric gland region. Rumen. Reticulum. Omasum. Abomasum. Avian glandular stomach. Small intestine: duodenum, jejunum, ileum. Large intestine: caecum, colon, rectum. Glands attached to digestive tube: liver, pancreas, salivary glands); 15 Respiratory system (Nasal cavity. Olfactory organ. Nasopharynx. Larynx. Trachea. Bronchial tree. Structure of bronci. Bronchioles. Blood-air barrier. Avian respiratory system); 16. Urinary system (Kidney: developmental stages: pronephros, mesonephros and metanephros. Kidney structure: nephron, renal corpuscle, proximal

convoluted tubule, loop of Henle, distal convoluted tubule, collecting ducts and tubes. Juxtaglomerular apparatus. Blood circulation. Urinary passages. Urinary bladder. Avian urinary system.); 17 Male reproductive system (Testis: tubules seminiferous contorti, interstitium, Leydig's cells, tubules recti, rete testis, ductuli efferentes, and ductus epididymidis. Ductus deferens. Prostate gland. Seminal vesicles. Bulbourethral gland. Urethra masculine. Penis. Testis in cock); 18. Female reproductive system (Ovary: primordial follicles, follicles in growth, Graafian follicles. Interstitial endocrine cells. Ovulation. Corpus luteum. Follicular atresia. Oviduct. Uterus. Endometrium in domestic animals. Myometrium. Perimetrium. Estrous cycle. Uterine cervix. Vagina. Implantation. Fetus position. Extra embryonic Yolk sac. Amnion. Alantois. Chorion. membranes. Placentation. Omphaloplanceta. Alantochorial placenta. Placenta deciduata. Placenta nondeciduata. Morphological classification of placentas. 19 Cardiovascular system (Endocardium. Myocardium. Epicardium. Fibrous cardiac skeleton. Heart valves. Differentiation of angioblasts. Lymph vessels structures.) 20 Lymphatic system (Diffuse lymphatic tissue. T and B lymphocytes. Plasma cells. Antibodies. Lymph nodules. Tonsils. Lymph node. Hemal nodes. Spleen. Thymus. Bursa Fabricii);

Lectures:

General embryology (2h); Epithelial tissue (2h); Connective tissue (2h); Cartilage (1h); Bone (1h); Blood (1h); Muscle tissue (1h); Nerve tissue (1h); Central nervous system (1h); Eye and ear (1h); Endocrine system (1h); Integumentary system (1h); Cardiovascular system (1h); Lymphatic system (2h); Digestive system (4h); Respiratory system (2h); Urinary system (2h); Male reproductive system (1h); Female reproductive system (2h); Extra embryonic membrane (1h).

Exercises:

Cytology (2h); Epithelial tissues - simple epithelium, transitional epithelium (2h); Epithelial tissues - Pseudo stratified epithelium, stratified epithelium (2h); Epithelial tissues - glandular epithelium (2h); Connective tissue - fibers (2h); Connective tissue - cell (2h); Blood cell (2h); Cartilage (2h); Bone tissue (2h); Muscle tissue (2h); Nerve tissue (2h); REVISION (2h); Central nervous system (2h); Eye (2h); Endocrine system (2h); Integumentary system: derivates of skin (2h); Cardiovascular system (2h); Lymphatic system - lymph nodules, lymph node (2h); Lymphatic system - thymus, spleen, bursa fabricii (2h); Digestive system II (2h); Digestive system III (2h); Digestive system III (2h);

	Digestive system	I\/ (2h):	Respiratory	system (2	h). Hrinary syst	em (2h):
	Digestive system IV (2h); Respiratory system (2h); Urinary system (2h); Male reproductive system (2h); Female reproductive system (2h); Extra

To om each. In co	I during the take the ase she/hat prelimin	ne course. Both a oral exam stude ne does not earn nary exam twice a	are worth ents must n enough

Final, oral exam (24-40 points)

The final exam is oral and knowlege of histological slides is tested. Each student will chose randomly a closed box with 5 slides. For each slide the student can gain 8 points. If the student does not recognise tissue or the organ, he/she shall lose the opportunity to be tested oraly on this slide. The minimum number of points is 24 and the maximum number of points is 40. The final grade is formed on the basis of the total sum of all five evaluation elements (attending lectures, attending the practicals, participation at practicals, preliminary exams and and points from the final exam).

In order to take the final, oral exam a student must attend at least 15 lectures lessons (3 points) and at least 48 practical (8 points), show minimal efforts (5 points) and gain the minimal 20 points from the preliminary exams(10 points per each). On that basis the student can gain a total of 36 points. At the final exam the student must have knowledge by which she/he gains 24 points. In the end the minimal number of points gained is 36 + 24 = 60.

Points	Grade
do 59	1 (F)
60-68	2 (E)
69-76	2 (D)
77-84	3 (C)
85-92	4 (B)
93-100	5 (A)

In case a student gains the maximum number of points by attending lectures (6), attending exercises (12) and for participation (10), also adding the number of points she/he gained at the preliminary exam (32), the student gains the maximum of 60 points. Showing knowledge and describing five histological slides the student can earn 40 points more, which makes 100 points in the end and is awarded with an excellent grade (5).

INTRODUCTION TO ENGLISH VETERINARY MEDICAL TERMINOLOGY I

1. GENERAL INFO	RMATION					
1.1. Course teacher	Dubravka Vilke-Pinter, Ph.D.	1.6.Year of the study programme	I			
1.2. Name of the course	Introduction to English Veterinary Medical Terminology I	1.7. Credits (ECTS)	1			
1.3. Associate teachers		1.8. Type of instruction (number of hours L+S+E+e-learning)	10 hours S + 5 hours E (of which 2 hours e- learning)			
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course	25			
1.5. Status of the course	obligatory	1.10. Level of application of elearning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRI						
2.1. Course objectives	The aim of the course Introduction to English Medical Veterinary Terminology 1 is to introduce students to the specific language register used in the field of veterinary medicine and to develop students' competences to use this language register. The course is designed to introduce the students to principles of word formation in veterinary medical English in order to develop participants' understanding, and ability to use a wide range of technical terms. Besides providing training in reading scientific and professional literature the course also aims to enable students to achieve general progress in verbal understanding and Information literacy.					
2.2. Course enrolment requirements and entry competences required for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	By studying the principles of word formation in technical terminology and by gaining understanding of terms used in various fields of veterinary medicine students develop competence to identify, acquire and use information provided in scientific and technical literature from the field. Besides focusing on specific language register of veterinary medical English, the course also aims to develop students oral and written overall anguage skills as well.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Having successfully completed the course student will/will be able to: recognise veterinary medicine language registar understand principles of scientific terms formation recognise technical terms from various fields of veterinary medicine independetly use a considerable number of scientific terms in a given context 					

reach basic understanding of the structure of technical and scientific									4:f: a

2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	the Veterinary medicine studies. Learning outcomes at the level of the course: Ater successful completion of the course the student will be able to: 1. apply basic chemical reactions and physicochemical processes; 2. compare the structure and properties of simple organic compounds and complex biologically important molecules: 3. connect the relationship of chemical structure of a molecule and its physical and chemical properties; 4. independently use basic methods of analytic chemistry for quantitative and qualitative analysis;						
2.5.Course content broken down in detail by weekly class schedule (syllabus)	 apply chemical calculations to solve the tasks. Lectures Introduction lecture: role of chemistry and biochemistry in veterinary medicine, matter structure; atoms, molecules, electronegativity, ionic and covalent bonds. Dispersed systems: suspensions, colloids, solutions, aqueous solutions, hydrogen bonds, electrolytes, diffusion, osmosis, colligative properties); Acids and bases: pH, buffer solutions, biological buffers, reaction energy: activation energy, endothermic and exothermic 						

	reactions, catalysts. 4. Alkanes, alkenes, alkynes, isomers and isomerism: structural stereiosomers 5. Oxygen-containing organic compounds: alcohols, ethers, aldeby ketones, carboxylic acids and derivatives. 6. Nitrogen-containing organic compounds: amines, heterocompounds, alkaloids. 7. Carbohydrates: classification and stereoisome monosaccharides, oligosaccharides and polysaccharides. 8. Lipids: structure, classification, saponification, amino acids: structure and properties. 9. Proteins: structure, enzymes, coenzymes, nucleic acids: purine pyrimidine bases, nucleosides, nucleotides. Laboratory exercices: 1. Qualitative chemical analysis: cations and anions 2. Solution preparation and optical methods 3. Quantitative chemical analysis: acidimetry and alkalimetry: 4. Experimental pH determination 5. Quantitative chemical analysis, redox reactions: iodometry 6. Qualitative and quantitative chemical analysis: determination						
	organic compounds Exercices in the lecture room: 1. Chemical calculations- Basis of chemical calculations 2. Chemical calculations- Composition of solutions I 3. Chemical calculations- Composition of solutions II 4. Chemical calculations- Neutralisation reactions 5. Chemical calculations- Dissociation, pH, buffer I 6. Chemical calculations- Dissociation, pH, buffer II 7. Chemical calculations- Redox reactions I 8. Chemical calculations- Redox reactions II 9. Reactions in organic chemistry - problems

of ECTS credits is equal to the ECTS value of the	Tests		Oral		(other)		
course)	Written exam	2	Project		(other)		
2.10. Grading and evaluating student work in class and at the final exam	Lecture attendance There are 18 lecture lessons. A student must attend 1 lesson to gain 0.33 points. The maximal number of points is 6 (18 lessons) and the minimal number of points is 3 (9 lessons)						

Exercise attendance

Exercises in the lecture room: there are 18 exercise lessons in the lecture-room (9 programmes). Each programme (two exercise lessons), is worth 0.66 points. Student must attend 7 programmes (14 lessons) in order to gain minimum of 5 points. Maximal number of points: 6 (18 lessons – 9 programmes).

Laboratory exercise: there are 18 exercise lessons in the lab (6 programmes). A student must attend 5 programmes (15 lessons) in order to gain minimal number of 5 points. Maximal number of points: 6 (6 programmes).

Exercise activity

Lab exercises: a student must solve a task from an exercise (programme) and present a report in order to get a signature for the exercise. Each correctly done and signed exercise is worth 1.67 points. A student must gain minimal 5 points. The maximal number of points: 10 points (6 programmes – coefficient 1.67). The minimal number of points: 5 (3 programmes).

Continuos knowledge assessment

Exercises in the lecture room:There will be 2 preliminary exams, organised during the sessions. Each preliminary exam is worth 8 points (combained 16 points). A student must gain minimal 10 points. For students who do not gain the minimal number of points makeup preliminary exam will be organised. The maximum number of points: 16 (2 preliminary exams). The minimal number o points: 10.

A preliminary exam from attended lectures will be organized during the sessions. The exam consists of 8 questions and each correct answer is worth 2 points. A student can gain maximal 16 points (10 correct answers), and she/he must gain a total of minimal 10 points (5 correct answers). A student who does not gain the minimal 10 points has a right to take a makeup preliminary exam. Preliminary exams: the maximum number of points: 16, the minimal number of points: 10

Final exam

In order to take the final exam a student must gain the minimal number of points from each evaluation element, i.e. the total of minimal 36 points from the first four evaluation elements. The final exam is in written form and it consists of 20 questions. Each correct answer is worth 2 points. A student can gain 40 points max. (20 correct answers). The minimal number of points a student must gain at the final exam is 24 (12 correct answers). The maximum number of points: 40. The minimal number of points: 24.

1.5. Status of the course	Compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	2 i.e. 10%		
2. COUSE DESCRI	PTION				
2.1. Course objectives	Through the course, students do acquire crucial knowledge and understanding about animal kingdom, which is per se the essence of the study of veterinary medicine. The goal of teaching this course is to acquaint the students of Veterinary medicine with the basic rules of functioning of living world and its relation to the non-living environment. It enables understanding of the wide range of processes from the transport of matter and energy from the level of cell and organism to the populations of all taxonomic groups of fauna and flora, and their relations on the level of ecosystem and entire biosphere. This is the precondition for any logical understanding of other courses from morphology and physiology to pathology, therapy and prevention of diseases. Additional needs for this knowledge emerge from the ever broadening of spectrum of species treated in the veterinary medicine, an either as patients, husbandry, hunting, collection, or human consumption in any form. Regulations on environmental matters (like various waste disposal) and on international trade				
2.2. Course enrolment requirements and entry competences required for the course	with living organisms are also getting more complex and stricter. The subject Zoology is at the beginning of the Veterinary medicine study and the only precondition is that a student can understand, speak and write in English.				
2.3. Learning outcomes at the level of the programme to which the course contributes 2.4. Learning	 taxonomically classifying every animal to the phylum level, while classifying mammals to the order level interpret basics of evolutionary processes explain the structure and role of cell parts during cell division distinguish types of reproduction, ways and processes of fertilization compare stages of embryonic development of invertebrates and various 				
outcomes expected at the level of the course	groups of vertebrates	o agvelopinent of invelte	Males and valious		

(4 to 10 learning outcomes)

- knowing abiotic and biotic ecological factors and mechanisms of their interactions
- distinguish biomes and phases of community successions
- classifying types of pollutants and basic mechanisms of their interactions in ecosystems

content broken down in detail by

2.5. Course

weekly class

schedule (syllabus)

Definitions (systematics, taxonomy, classification), Systematic categories and binary nomenclature (Linne), Phylogeny and evolution (Darwinism); Phylogenetic tree (6 Kingdoms of living organisms: Prokaryotes, Archea, Protista, Animalia, Plantae, Fungi); Eukarvotes, Cell biology; Features of eukaryote cell. Comparison with prokaryotic cell. Nucleus and nucleus membrane importance. Cell organelles evolution, structure and function: cell membrane, nucleus, endoplasmic reticulum, mitochondrion, lysosomes, microtubule, ribosomes, nucleolus, centrosome. Animal and plant cell distinctions. Chromosomes: structure and cycle. Protozoa: Sarcodina, Mastigophora, Ciliata, Eusporozoae, Cnidosporidia. Evolution of metazoa: Multicellular animals' appearance and development. Parazoa (Porifera, Placozoa). Cell organelles and whole cells specialization. Acelomata: Cnidaria, Platyhelminthes, Nemathelminthes. Non vertebrate Celomata and coelom: coelom evolution, structure and function. Pisces: Cyclostomata, Placodermi, Chondorichthyes, Osteichthyes, Amphibia, Reptilia, Aves, Mammalia: Characteristics and division. Mammalia: Orders: Insectivora, Dermotoptera, Chiroptera, Edentata, Pholidota, Primates, Rodentia, Lagomorphea, Cetacea, Carnivora, Tubuliedentata, Hyracoidea, Proboscidea, Sirenia, Perissodactyla, Artiodactyla. Cell divisions: Cell division types – somatic cells division - mitotic division - reductive division: meiosis I and II, (Crossing-over, oogenesis spermatogenesis, spermiogenesis) - endomitotic division. Chromosome cycle in u mitosis and meiosis. Polykariontia, polyploidy, polyteny - gigantic chromosomes. Description and role of each cell division type. Phases analysis. Division result. Sex cells: Gametes or sex cells (evolution of sex cells), Spermatozoa and egg (structure and function). Eggs classification by quantity and location of yolk content at all animals by groups). Reproduction, types and purpose. Nonsexual and sexual reproduction (hermaphrodite, diecic animals). Advantages of sexual reproduction. Parthenogenesis, androgenises. Fertilization (internal, external), monospermy, polyspermy (fertilization duration), Phases of fertilization: singamy, cariogamy, activation of egg. Embryogenesis, ontogenesis, phylogenies. Comparative developmental embryology: Cleavage segmentation. Embryonic development phases. Germ layers. Metamorphosis. Neotenia. Prostomia, deuterostomia. Cleavage types: Total (holoblastic) equal or adequal. Partial (meroblastic), discoidal and superficial. Gastrulation: invagination, involution, epiboly, delamination. mesodermal roof. Neurula, Tubulation. Embryonal sheets (birds and reptiles): yolk sac, chorion, amnion, allantois and allanto-chorion (evolution, structure and function). Germ layers derivates. Ecology, Living and non living matter relations. World strategy of nature conservation. Basic ecologic terminology: biosphere, bio-cycle, biomes, ecosystem, biotope (habitat, microhabitat), biocenosis, ecological niche, ecological spectrum, ecosystem homeostasis, Ecological pyramids of numbers, biomass and energy (plants, herbivores and carnivore); Energy in ecosystem. Abiotic factors: Geochemical mineral cycles, light, heat, water, pH, pressure. Biotic factors: Abundance, sociability, dominancy, activity range, fertility, mortality, biotic potential, age structure, population dynamics. Intra- and inter-specific relations (neutralism, competition, predation, parasitism, mutualism). Successions and climax of biocenoses, Order of population replacement, Dependences and final population types. Biomes: Aquatic and terrestrial: rain forests, deciduous forests, taiga, tundra, grasslands, chaparral, deserts, ecotone. Biodiversity: Definition, evolution and importance. Methods of ecological research: Qualitative and quantitative methods. Influences of man on

	ecological equilibr	ium: Di	ract (resource av	nloitation	and c	onetructional o	hanges)
	ecological equilibrium: Direct (resource exploitation and constructional changes) and indirect – pollution (types: organic, un-organic, dust, radioactive, thermal						
		pollution /water, global warming/, acid rains, ozone holes, light pollution, noise),					
		genetically modified organisms, monocultures.

Obligatory Subjects - 2nd study year

Anatomy with Organogenesis of Domestic Animals III

Animal Breeding and Production

Applied Animal Nutrition

Basic Animal Nutrition

General Microbiology

Hygiene and Housing of Animals

Introduction to English Veterinary Medical Terminology II

Molecular Biology and Genomics in Veterinary Medicine

Physical Education III

Physical Education IV

Physiology of Domestic Animals I

Physiology of Domestic Animals II

Veterinary Immunology

ANATOMY WITH ORGANOGENESIS OF DOMESTIC ANIMALS III

1. GENERAL INFORMA	ΓΙΟΝ				
1.1. Course teacher	Prof. Martina Đuras	1.6.Year of the study programme	2 nd year, 3 rd semester		
1.2.Name of the course	Anatomy with organogenesis of domestic animals	1.7.Credits (ECTS)	5.5		
1.3.Associate teachers	Prof. Srebrenka Nejedli; Prof. Tajana Trbojević Vukičević; Assist. Prof. Mirela Pavić; Assist. Prof. Ivan Alić, Assist. Denis Leiner, DVM; Assist. Kim Korpes, DVM; Assist. Magdalena Kolenc, DVM; Assist. Ante Plećaš, DVM	1.8.Type of instruction (number of hours L+S + E + e-learning)	15 L + 63 E		
1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9.Expected enrolment in the course			
1.5.Status of the course	Compulsory	VEF-LMS			
2. COURSE DESCRIPTION	ON	,			
2.1.Course objectives	embryonic developm medicine students in	s the gross anatomy of dome nent of organs and organic s n order to ensure basic know physiology, pathology and cl	ystems to veterinary rledge for other		
2.2.Course enrolment requirements and entry competences required for the course	Completed courses "Anatomy with organogenesis of domestic animals I" and "Anatomy with organogenesis of domestic animals II".				
2.3.Learning outcomes at the level of the programme to which the course contributes	Following successful completion of the course, students will be able to apply acquired knowledge on gross anatomy and development of the head and neck of domestic mammals and basic gross anatomy of domestic birds during preclinical and clinical courses.				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Following successful completion of the course, students will be able to: 1list and describe major anatomical structures of the head and neck of domestic mammals and basic gross anatomy of domestic birds 2. explain the development of the structures of the head and neck 3. apply anatomical nomenclature 4. skilled communicate anatomical information 5. utilize dissection skills				

2.5.Course content broken down in detail by weekly class schedule (syllabus)	Lectures: 1. Principles of the skeleton of the head and cervical spine (1 hour), 2. Muscles of the head and neck (2 hours), 3. Mouth, salivary glands, pharynx and the esophagus: structure and development (3 hours), 4. Upper respiratory tract, larynx and trachea: structure and development (2 hours), 5. Development of the nervous system (1 hour), 6. Brain, spinal cord and cranial nerves (2 hours), 7. Eye: structure and development (1 hour), 8. Ear: structure and development (1 hour), 9. Basic gross anatomy of domestic birds (2 hours) Practicals: 1. Cervical vertebrae (2 hours), 2. Skeleton of the head (8 hours), 3. Regions, fasciae and skin muscles of the head and neck (3 hours), 4. Muscles of the head (4 hours), 5. Muscles of the neck and nuchal ligament (6 hours), 6. Ventral neck region and parotid region (3 hours), 7. Buccal region (3 hours), 8. Masseteric region and temporomandibular joint (3 hours), 9. Mouth (3 hours), 10. Pharynx (3 hours), 11. A. carotis externa (2 hours), 12. Intermandibular region (3 hours), 13. External nose and nasal cavity (3 hours), 14. Larynx (3 hours), 15. Eye (4 hours), 16. Vestibulocochlear organ (3 hours), 17. Brain (3 h), 18. Basic gross anatomy of domestic birds (4 hours).

assessment elements in order to take the final exam. A student can justifiably be absent from up to 50% of the lectures and 20% of the practicals. The course has 15 hours of lectures. The student has to attend at least 8 hours of lectures. The course has 63 hours of practicals. The student has to attend at least 50 hours of practicals. Active participation in the practicals is evaluated through short oral testing during practicals and is graded with 10 points in total. The student has to achieve at least 5 points. Oral exam is graded with 40 points in total. The student has to achieve at least 24 points at the oral exam. Number Availabilit of copies y via Title in the other library media KÖNIG, H. E., H.-G. ANIMAL BREEDING AND PRODUCTION

1. GENERAL INF	ORMATION				
1.1. Course teacher	Anamaria Ekert Kabalin, PhD, Full Professor	1.6.Year of the study programme	2nd		
1.2.Name of the course	Animal Breeding and Production	1.7.Credits (ECTS)	7		
1.3.Associate teachers	Velimir Sušić, PhD, Full Professor (permanent) Sven Menčik, PhD, Associate Professor Maja Maurić, PhD, Assistant Professor Ivan Vlahek, PhD Aneta Piplica, VMD	1.8.Type of instruction (number of hours L+S+E)	34 L + 14 S (4 e- learning) + 42 E		
1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9.Expected enrolment in the course	20		
1.5.Status of the course	Compulsory	1.10.Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	4,4%		
2. COUSE DESC	RIPTION				
2.1.Course objectives	The objective of the course Animal breeding and production is to teach students of veterinary medicine how to evaluate and improve genetic basis of animals. Special attention is focused on genotype-phenotype characteristics which have influence on quality and quantity of animal products, than to the characteristics of animal resistance to diseases and animal organism -				
2.2.Course enrolment requirements and entry competences required for the course	Undergraduate courses: Basic Statistics in Veterinary Medicine and Animals Breeds Characteristics				
2.3.Learning outcomes at the level of the programme to which the course contributes	Material is divided into three parts that first allow student to acquire knowledge about animal species as a result of its genetic particularities and specific environment. Then there are lessons about different production systems and the way of using animal genetics to improve, quantity and quality of production and in the same time how production influence on animal health. Finally, in the third part students learn how to estimate genetic basis of particular traits and describe breeding methods that enable us to improve them.				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successfully completion of the course students will be able to: - understand the role of genetic basis in different ways of breeding and exploiting animals - apply different methods to improve the genetic basis of animals with respect to specific breeding traits - identify various animal production systems - gather animal health and production data - analyse animal health and production data - setting the goals in cooperation with farmer				

	- control advancement according to set goals

APPLIED ANIMAL NUTRITION

1. GENERAL INFO	RMATION					
1.1. Course	Full professor Željko	1.6. Year of the study	2nd			
teacher	Mikulec, DVM, PhD	programme				
1.2. Name of the course	Applied Animal Nutrition	1.7. Credits (ECTS)	5,5			
1.3. Associate teachers	Full professor Tomislav Mašek, Associate Professor Hrvoje Valpotić (vice course leader), Assistant Professor Diana Brozić, Assistant Ana Marija Kovač, DVM	of hours L + S + E + e-learning)				
1.4. Study programme (undergraduate, graduate, integrated)	Integrated	1.9. Expected enrolment in the course				
1.5. Status of the course	Compulsory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	2nd level, 10%			
2. COUSE DESCRI	PTION					
2.1. Course objectives	Upon completion of the lectures and after passing the final exam of "Applied Animal Nutrition" the students will be able to recognize the conditions in the field and to take feed samples for chemical analysis. They will also know the right procedure of taking samples for analysis and super analysis and to correctly interpret the results. The acquired skills will enable them to individually formulate balanced rations and feedstuffs for all species and categories of animals. They will also be able to recognize specific nutrient deficiencies and malnutrition in domestic and wild animals which could have a negative effect on the health status and their products. Students will be capable of determining and applying preventive and therapeutic feeding in cases of metabolic disorders of high producing animals. Besides field work the students will be capable of working in feed mills and in other biomedical fields which require basic knowledge of					
2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to which the course	Attended the course of "Basic Animal Nutrition"					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Upon successful completion of the course students will be able to: 1. Knowing the characteristics of feeding different species of domestic and wild animals in certain physiological periods 2. Estimating the daily nutritive needs of animals according to the tables of nutritional requirements, biological experiments and practical experience 3. Recognize deficiencies in feed of domestic and wild animals 4. Applied manual and computer assembling meals for certain species and categories of animals					

5. Recommend proper feeding for different species and categories of animals in practical farm conditions and corrections for inappropriate feeding

1 Factors affecting feed consumption (Taste. Appearance. Hunger. Appetite. Physical form. Mechanisms of feed intake. Inhibition of feed intake. Expected feed intake. Modulation of feed intake.); 2 Physiological and nutritive specificities of animals (Evolution of feeding. Feeding ecology. Hoffman distribution. Specificities of monogastric and ruminant feeding. Feed utilization strategies); 3 Feeding dairy cows (Feed consumption. Forage-concentrate ratio in cow feeding. Nutritional requirements of dairy cows. Feeding dry cows. Feeding dairy cows in different periods of lactation. Feedstuffs in dairy cow nutrition. Formulating rations for dairy cows. Interpreting milk composition, Malnutrition.); 4 Calf nutrition (Physiological and nutritive characteristics of calves. Nutritive requirements of calves. Feedstuffs for feeding calves. Feeding calves in different feeding systems. Feeding fattening calves.); 5 Feeding beef cattle (Feed consumption in beef cattle. Nutrient requirements of beef cattle. Physiological aspects of fattening. Feedstuffs for beef cattle. Types of rations for beef cattle. Feeding beef cattle in intensive and extensive systems); 6 Feeding heifers (Nutrient requirements of heifers, Rations for heifers,): 7 Feeding bulls (Feeding young bulls. Feeding grown bulls. Nutrient and energy requirements of bulls); 8 Sheep nutrition (Feeding habits of sheep and dry matter intake. Nutrient requirements of sheep. Requirement formation principles. Feeds in sheep production. Formulating rations and feedstuffs for sheep. Feeding sheep in different physiological conditions and production periods. Feeding yearlings. Feeding rams. Malnutrition.); 9 Feeding lambs (Nutritional characteristics of lamb feeding. Nutrient requirements of lambs. Feeding lambs in different weaning systems. Feeds and feedstuffs in lamb nutrition. Feeding fattening lambs. Feeding of breeding lambs.); 10 Goat nutrition (Feeding habits of goats and feed intake. Nutrient requirements of goats. Forages in goat nutrition. Formulating rations and feedstuffs for goats. Feeding goats in different production periods. Feeding yearlings. Feeding bucks. Malnutrition.); 11 Feeding kids (Characteristics of kid feeding. Nutrient requirements of kids. Feeding weaned kids. Feeding fattening kids. Feeding breeding kids.); 12 Feeding sows and boars (Physiological and nutritive characteristics of swine. Feeding gestating sows. Feeding lactating sows. Feeding boars. Feeding gilts.); 13 Feeding piglets. (Physiological and nutritional characteristics of piglets. Weaning systems. Nutritive requirements of piglets. The influence of piglet feeding on mucosal immunity and health): 14 Feeding growing-finishing pigs (Physiological and nutritional characteristics of growing-finishing pigs. Feeding systems for growing-finishing pigs. Nutrient requirements of growing-finishing pigs.); 15 Feeding poultry (Physiological and nutritional characteristics of poultry, Feeding breeders. Feeding replacement pullets. Feeding broilers. Feeding turkeys. Feeding ducks. Feeding geese. Feeding Japanese quails. Feeding guinea fowl.); 16 Feeding horses (Physiological and nutritional characteristics of horses. Nutrient requirements of horses. Keeping and feeding systems for horses. Feeding horses in training. Feeding stallions and broodmares. Feeding lactating mares. Feeding foals. Feeding aged and convalescent horses. The influence of nutrition on horse health status.); 17 Dog and cat nutrition (Nutrient requirements of dogs and cats. Similarities and differences of dog and cat nutrition. Nutrition in gestation and lactation. Nutrition of offspring. Nutrition of adult dogs and cats. Nutrition of working dogs. Nutrition of aged animals. Characteristics and types of pet food, Body condition scoring.); 18 Feeding rabbits and fur animals (Characteristics of the digestive system. Digestion of particular substances. Pet rabbits. Commercial breeding. Feeding systems. Nutrition related diseases.); 19 Game nutrition. (Specific qualities of game nutrition. Nutritive and energy requirements of game. Winter supplement feeding of large and ground game. Nutrition of game animals in intensive production systems.); 20. Fish nutrition (Characteristics of fish nutrition opposed to land animals. Natural feeding habits of the fish. Energy and nutrient requirements of

fish. Nutrition of freshwater and saltwater fish.).

HYGIENE AND HOUSING OF ANIMALS

1. GENERAL INFO	RMATION		
1.1. Course teacher	Full prof. Kristina Matković	1.6. Year of the study programme	2.
1.2. Name of the course	Hygiene and housing of animals	1.7. Credits (ECTS)	6.0
1.3. Associate teachers	Assoc. prof. Gordana G. Gračner Assoc. prof. Mario Ostović Ivana Sabolek, DMV - assistant	1.8. Type of instruction (number of hours L+S+E+e-learning)	29 + 22 + 44
1.4. Study programme (undergraduate, graduate, integrated)	Integrated	1.9. Expected enrolment in the course	
1.5. Status of the course	Obligatory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	
2. COUSE DESCRI			
2.1. Course objectives	to ensure appropriate animal conditions of housing environments of animal productivity and reproduction about the methods of animal contamination, and on the rol to prevent stress situations arfrom one setting to another oplays a crucial role in prevent provide students with due knoof disinfection in preserving ar and rodents in the environments animals. The objective of the students for preservation of bis in the environments of the students for preservation of bis in the environments of the students for preservation of bis in the environments.	dents acquire skills and knowle housing to prevent the occurre ronment that may comprome. In addition, students will acqual waste disposal to prevent he of veterinarian in animal care of health disturbance due to inne, or because of poor animal tive veterinary medicine; there wledge and skills in the method himal health as well as in the control of the course is to develop composition of the course is to develop composition of the course health state through options.	ence of unfavourable aise animal health, uire due knowledge vent environmental e and transportation appropriate transfer hygiene. Sanitation efore the course will ds, types and effects ontrol of pest insects ease to humans and petences qualifying environment and the
2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to which the course contributes		ent, animal behaviour and welf	fare».
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	species and categories of an performance; - define the role of veterinar order to avoid stress and discone environment to another, - choose ways of animal way pollution prevention;	accommodation and housing of imals on their health, production in the transportation and orders in their health due to import poor hygiene of animals; aste substances disposing for proclimatic conditions in certain	care of animals, in proper transfer from

	- propose appropriate measures of disinfection and control of harmful insects and rodents in order to preserve the animals and humans health status;
	- independently conclude about animal welfare on the basis of the production conditions
2.5. Course content broken down in detail by weekly class schedule (syllabus)	1. Environment and animal health (Environmental factors — biotic and abiotic; Thermocomfortable and thermoneutral zone); 2. Construction and equipping of stables (Stable types; Choice of site; Construction elements of stable; Thermal and hydroisolation of housing; Stable equipping); 3. Microclimate and microclimate elements (Temperature, humidity, air flow velocity, dust and airborne micro organisms; Noise and its sources; Lighting; Stable air gas composition; Determination of stable microclimate conditions); 4. Heat balance in stables (Definition; Heat generated by animals; Heat lost through exposed surfaces — coefficient of heat flow; Heat needed for warming up fresh air); 5. Hygiene of cattle housing and accommodation (Bioecologic cattle characteristics in the context of their housing and accommodation; Systems of keeping particular cattle categories; Microclimate factors in cattle barns); 6. Hygiene of sheep housing and accommodation (Sheep stable; Microclimate factors in sheep stable equipment; Auxiliary structures in modern sheep farm system); 7. Hygiene of goat housing and accommodation (Goat stable; Microclimate factors in goat stable; Goat stable interior; Auxiliary structures in modern goat farm system); 8. Hygiene of pig housing and keeping (Keeping of gilts, nongravid, gravid and lactating sows; Keeping of weaned piglets; Keeping of fattening pigs; Keeping of boars; Microclimate complex in pig housing); 9. Hygiene of horse housing and accommodation (Bioecologic characteristics of poultry, and types of accommodation and accommodation (Bioecologic characteristics of poultry, and types of accommodation and housing of particular species and age categories – chicken, turkey, duck, goose, pheasant, partridge; Species specific egg incubation); 11. Hygiene of pet housing and accommodation (Accommodation and housing of dogs and cats; Hygiene of housing other pet species – hamsters, small rodents, cage birds, aquarium fish, terrapin, etc.); 12. Hygiene of laboratory animal housing and accommodation (Bioecolo

Dubravka Vilke-Pinter, Ph.D. Introduction to English Veterinary Medical Terminology II 1.8. Type of instruction (number of hours L + S + E + e-learning) undergraduate 1.9. Expected enrolment in the course obligatory 1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%) PTION The aim of this course is to expand students' knowle language register pertaining to the field of veterinate technical terminology that is widely present in the profield. The course also aims to develop students' understance and linguistic means used to achieve textual cohesion Besides providing training in reading scientific and procurse also aims to develop general written and oral. The course aims to develop general written and oral enhance students abilities to use relevant literature dustudies, and beyond, in the course of their future proficcourse also focuses on developing students' overall we competence in English to enable them to communicate		

2.5. Course content broken down in detail by weekly class schedule (syllabus)	Analysis of the usage of professional terminology in technical and academic texts. Physical description. Topics: Organs and organ systems. Skeletal system. Physical description. Topic: Basic terms in genetics. Classifications. Topics: Species diversity; Taxonomic classifications. Graphical presentation of data. Topic: Ecology and endangered species. Usage of cohesive devices that create coherence in technical and academic texts: Description of processes and of sequences of events. Topics: Developmental cycles in some animal species Digestive system of ruminants. Cause-and effect relations. Topic: Etiology and pathogenesis of diseases. Contrasting and comparing. Topic: Cattle breeds.

MOLECULAR BIOLOGY AND GENOMICS IN VETERINARY MEDICINE

1. GENERAL INFO	1. GENERAL INFORMATION								
1.1. Course	Full prof. dr. sc. Maja Popović,	1.6. Year of the study	2nd						
teacher	PhD	programme							
1.2. Name of the course	Molecular biology and genomics in veterinary medicine	1.7. Credits (ECTS)	3,5						
1.3. Associate teachers	Prof. Josip Kusak,PhD; Full prof. Ksenija Vlahović, PhD; Prof. Tomislav Gomerčić, PhD; Assoc prof. Daniel Špoljarić, PhD;	1.8. Type of instruction (number of hours L+S+E+e-learning)	5+10+30						
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course							
1.5. Status of the course	Compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	10%						
2. COUSE DESCRI	PTION								
2.1. Course objectives	Students will be able to recognize importance and contribution of genomics and proteomics in veterinary medicine and biotechnology. They will be able to comprehend and check basic laws of inheritance at the molecular level, from phenotype expression in prokaryotes and animals, up to qualitative and quantitative phenogenetics of artificial selection. They will acquire knowledge about molecular processes of informative macromolecules up to genome expression in prokaryotes and animals. They will be able to recognize causes and effects of spontaneous and induced mutations in animals. They will acquire with the role and biomedical importance of molecular signals and differential molecules involved in the regulation of cell and life cycle in animals, particularly during their embryomic development. Students will be able to recognize the methods of molecular biology applicable in veterinary medicine and comprehend their importance in prevention, diagnostic and therapy, as well as in the veterinary biotechnology. They will realize possible risks of applying recombinant DNA technology for health and welfare of animals and humans, as well as for environment. To enroll in the course Molecular biology and genomics in veterinary medicine students must first undergo the following: Zoology, Botany in Veterinary								
2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to which the course contributes	Recognition and understand molecular biology and genetics forensic. Understanding of basic principl tissues.	ing of contemporary aspect in veterinary medicine, pub	s of cytology, olic health and						
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Understanding of molecular translation of animal information in 2. Understanding health and ecoloranimal organisms and cells, hormones, enzymes, vaccines, manimal origin. Understanding genetic disorders	nacromolecules. ogical justification and risk of u biotechnological preparation nedications) and genetically m	sing transgenic ns (cytokines, nodified food of						

4. Selecting molecular-genetic method for preventive, diagnostic and therapy of ill animal.

1 Historical aspects and future challenges (Past, present and future of molecular biology and genomic within the scope of veterinary medicine and public health, Concept and importance of genomics and proteomics in veterinary medicine); 2 Origin and evolution of animal cells at the molecular level (Molecular basis of animal embryonic organisms development; Comparative approach to the molecular structure of animal cells (mammals and birds) of interest for veterinary medicine; Animal cells as experimental models in veterinary medicine (epithelial, limbal cells, melanocytes, fibroblasts from domestic pig as a model system in biomedical research); 3 DNA, genes and heredity in animals (DNA molecule as a carrier of genetic information; Comparative review of animal karyograms (mammals and birds); Genetic maps of animals (mammals and birds); Application of Mendelian laws of inheritance in veterinary medicine; Sexually related characteristics in animals (colour of fur in "caliko cats", colour of coat in cattle, possessing or non possessing of horns in sheep, colour of feathers in hens etc.); Multiple genes of interest for veterinary medicine; Lethal genes of animals; Population genetics: natural and artificial selection at the level of herd and/or flock for health and productivity traits in species of interest for veterinary; phylogenetic relations (species, subspecies, breeds, geographic varieties) of animals at the molecular level; Mutations of genomes, chromosomes and genes in animals; 4 Bioenergetics of animals at the molecular level (a comparative review of mitochondrial genomes); Molecular basis of animal cells metabolism; 5 Replication, self-maintenance and rearranging of genomic DNA of animals (Molecular mechanism of DNA replication - origin and initiation of the replication.) DNA polymerase. Replication fork, fidelity of the replication process. Direct damage reversal of DNA. Telomeres and telomerase (multiplying of chromosomal terminal ends. DNA repair (excision and recombination repair). DNA arrangement, transposition and amplification of genes); 6 Synthesis and maturation of RNA (Types of RNA. Transcription, Regulation of transcription - cis regulatory genes; Maturation and metabolism of mRNA); 7 Synthesis, arrangement and regulation of proteins in animals (Transport RNA. Structure of ribosome. Process of translation - initiation, elongation and termination; Levels of structure of proteins); 8 Expression of genetic information in animals (Gene expression in animals. Colinearity of genes and proteins. Genetic markers in animals (birds and mammals). RNA viruses and reverse transcription); 9 Regulation and control of gene expression in animals (Eukaryotic gene function. Transcription control of gene expression - transcription activators, repressors and control gene regions in animals: Posttranscription control (feedback inhibition of translation and protein degradation); 10 Cell signalling in animal cell (Forms of signalling between the cells. Signalling molecules and their membrane receptors. Paths of transfer of cell signals from the membrane to the nucleus - genes. Signalling of cell survival); 11 Cell cycle of animal cell (Molecular events in the M phase - phases of mitosis, meiosis and cytokinesis; Effects of cell growth and extracellular signals on regulation of cell cycle. Control points of the cell cycle. Comparative review of molecular aspects of gametogenesis, fertilization and activation of zygote in animals (mammals and birds). Regulators of development through the cell cycle; Molecular mechanisms of physiological and pathological apoptosis of animal cell); 12 Regulators of normal cell proliferation and differentiation in animals (Stem cells of animal origin and their application in veterinary medicine; Cell proliferation and differentiation. Differentiation molecules and function of mature cells. Protooncogenes - protooncoproteins. Transformation of protooncogenes into oncogenes. Point mutations of protooncogenes in animals. Amplification of protooncogenes. Retrovirus insertion into region of protooncogenes. Translocation of protooncogenes): 13 Signalling in genetic control of the embryonic development of animals (Homeotic genes. Evolution of homeotic genes. Expression of hox genes during embryonic development. Mutations of hox genes – developmental anomalies in animals birds and mammals): 14 The recombinant DNA technology in veterinary medicine (From genes to proteins and vice versa. Production of recombinant molecules -

2.5. Course content broken down in detail by weekly class schedule (syllabus)

	cytokines, interferons, vaccines of interest for veterinary medicine; Vectors for recombinant DNA. Expression of cloned genes. Detection of nucleic acids. Gene transfer in animals. Transgenic animal cells and organisms – GMO. Molecular genetics in diagnostic of inherited diseases of domestic animals (birds and mammals); Mutagenesis of cloned genes. Production of animal proteins in bacterial cells. Application of gene therapy <i>ex vivo</i> and <i>in vivo</i> in veterinary medicine. Application of reproductive and therapeutic cloning in veterinary medicine); 15 Cellular and molecular methods in veterinary medicine, public health and animal forensic genetics (Application of cellular and molecular methods in veterinary medicine; Hybrid technology. Animal germinal cell cultures. Animal cells culturing. Functional cell tests. Cytometric determination of lymphoid/myeloid cell profiles in peripheral blood and other body fluids of animals. Electrophoresis. Animal genomic DNA isolation. Animal RNA isolation. Methods for analysis of DNA, RNA and proteins. – Southern blot, Western blot, Northern blot. DNA amplification by polymerase chain reaction - PCR. DNA typing. DNA fingerprinting. DNA sequencing. DNA/RNA hybridization. DNA probes. DNA chips. <i>In situ</i> hybridization in immunocytochemistry).

ECTS credits is equal to the ECTS	Tests	1.12	Oral exam		(other)			
value of the course)	Written exam	1.4	Project		(other)			
2.10. Grading and evaluating student work in class and at the final exam	must attend 3 hours number of points gression of the "Mole hours of seminars i maximal number of the session a studer points during the sevaluation element practices the studen 30 exercise lessons correctly done and seminars and exercises and exercises a student repoints. The maximal During the session exercises. Each precorrectly solved proevaluation element 22 points from premaximal number of							

teaching material from all programme exercises, which will be organized upon completion of the lessons in that session. The total number of points at the preliminary exam is 35. A student who passes the makeup preliminary exam with more than 50 % correct answers has right to take the final exam. The minimal conditions for passing at the first, second, third, fourth and fifth evaluation elements will be summed up and they will be worth a total of 36 points. In order to take the final exam a student should gain the stated 36 points. The final exam starts with a student's short analysis of results gained from the five types of activities of continuous knowledge checking. Questions in the final exam will be put in a way that a student can answer in writing. The maximum number of points that can be gained from the final exam is 60 points. A student must show at least a sufficient knowledge at the final exam regardless of gained number of points from the first five evaluation elements, which could be higher than 36. The minimal number of points a student must gain at the final exam is 36 in order to gain minimal number of 24 points. In case a student does not satisfy at the final part of the exam, the lecturer determines time for reexamination. Regardless of a fact that a student gained the number of points from the first five evaluation elements on the basis of makeup preliminary exam or not, the same rules are valid for forming the final mark. The final mark is formed on the basis of total sum from all six evaluation elements, according the following table. The final mark is expressed in terms of quantity by a numeric value and by a grade in accordance with points value, from 1 to 5. Student who didn't succesfully master the course programme is marked by 1. Mark 1 stands for unsufficient achievement.

Points	Grade
up to 59	1 (F)
60-68	2 (E)
69-76	2 (D)
77-84	3 (C)
85-92	4 (B)
93-100	5 (A)

PHYSIOLOGY OF DOMESTIC ANIMALS II

1. GENERAL INFORMAT	TION				
1.1. Course teacher	Ana Shek Vugrovečki, PhD, assistent professor Ivona Žura Žaja, PhD, assistant professor - deputy	1.6.Year of the study programme	II.		
1.2.Name of the course	Physiology of domestic animals II	1.7.Credits (ECTS)	10		
1.3.Associate teachers	Jasna Aladrović, PhD, associate professor; Ana Shek Vugrovečki, PhD, assistant professor; Ivona Žura Žaja, PhD, assistant professor; Lana Pađen, PhD, assistant professor; Josip Miljković, DVM	1.8.Type of instruction (number of hours L + S + E + e-learning)	45+25+60		
1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9.Expected enrolment in the course			
1.5.Status of the course	Compulsory	1.10.Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIPTION	N	()			
2.1.Course objectives	Course Physiology of domestic animals II qualifies students for progressive development of knowledge and understanding of basic principles and facts of physiological processes from cell to the total body, understanding and correlating of regulatory mechanisms, understanding of homeostasis keeping, acid-base balance, development of knowledge and skills related to body liquids in special regard of blood physiology, understanding of physiological function of muscle/nervous system, physiological function of hormones in context of the whole homeostatic system. The goal is to provide the progressive development of skills in collecting, preparing, and interpreting the results of different samples analysis, to provide modern trends in veterinary physiology so that students will achieve a working knowledge of physiology; development of abilities for interpretation, and conclusion about information; abilities of searching for information in literature.				
2.2.Course enrolment requirements and entry competences required for the course	Enrolment requirements: con animals I Entry competences: - acquire domestic animals I				
2.3.Learning outcomes at the level of the programme to which the course contributes					
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successfully mastering the describe physiology of heart and digestion in monogastric animal metabolism of nutrients, mineral of oviposition, lactation and the	nd cardiovascula Is and ruminants Ils and vitamins,	r system, respiration, , excretion, the physiological processes		

mechanisms of specific body systems; **3. interpret** functions of different body systems during different physiological conditions; **4.** prepare biological samples for various laboratory analyses; **5. know** the concept of modern diagnostic tools and machines (haematological and biochemical analyser, spirometry, ECG, EMG, EEG); **6. analyse** and interpret the results of laboratory tests

2.5.Course content broken down in detail by weekly class schedule

(syllabus)

1. Cardiovascular system (Physiological features of cardiovascular system in domestic animals, physiology of cardiac muscle, heart as a pump, rhythmic excitation of the heart. Cardiac cycle – electric changes, mechanic changes, pressure and volume changes, sound changes; blood flow through heart. Striking volume, minute volume, regulation of heart pumping - auto regulation, humoral, endocrine and nervous regulation, cardiovascular receptors. Electrocardiography (Einthoven's triangle, uni and bipolar electrocardiography). Energetic of heart pumping. Arterial and venous blood pressure, blood pressure regulation. Measurement of blood pressure and pulse - Valsalvin maneuver. Hemodynamics, peripheral circulation - arterial, capillary and venous blood flow, peripheral circulation regulation, metabolism of substances and liquids in tissues, lymph. Special blood flows: pulmonary, coronary, hepatic, brain circulation). 2. Respiration (Ventilation and lung mechanics, partial pressures lungs-blood, transport of oxygen and carbon dioxide in blood. Control of respiration; respiratory centres, factors that influence on respiratory centres. External breathing; inspiration, expiration, respiratory volumes, alveolar ventilation, intrapulmonary pressure and pressure in thorax).3. Digestion in mouth and simple stomach (Function of digestion. Physiological features of digestion in carnivores, herbivores and omnivores. Food taking, swallowing, salivation, regulation of salivation, gastric motility, regulation of gastric secretion. Store, mix, and dissolve food in stomach, emptying of dissolved food into small intestine. Vomiting. 4. Digestion in ruminants (Basic principles of symbiosis ruminant-micro population, motility; relation water-dry substances, oesophagus, rumination, gasses in rumen; influence of pH, nourishment, elimination, role of bacteria and infusoria in digestion, efficacy of digestion in rumen. Digestion of carbohydrates, proteins and fats, ruminohepatic circle of nitrogen, synthesis of vitamins, metabolic pathways of low fatty acids, digestion in abomasums). 5. Digestion in small and large intestine (Relation stomach - duodenum, pH change and influence of food, secretion of bile and pancreatic juice, regulation of their secretion. Gutt polypeptides. Secretion of small and large intestine, digestion and absorption). 6. Excretion (Role of excretory organs; general and special functions, formation of urine, nephrone physiology. Regulation of primary and secondary urine secretion, counter current mechanism, urination physiology): 7. Metabolism of carbohydrate (Regulation of anaerobic and aerobic glycolysis; metabolic pathway of lactate, Kory cycle, regulation of gluconeogenesis; ruminants, carnivores. Pentose-phosphate pathway, glucuronic acid cycle; regulation, role, glycogenic reserve). 8. Protein metabolism (Classification of body proteins, half-life of body proteins, protein synthesis and degradation in different animal species; regulation. Specificities of non-protein nitrogen elimination, regulation biosynthesis; hormonal, genetic, energetic, by nourishment). Metabolism of fats (Regulation of lypogeneseis-lypolisis relation, possible pathways AcCoA; receptive capacities ketogeneses, cholesterinogenesis. Body fats - transport fats relation. Saturation of fat acids, lypolisis. 10. Metabolism of minerals (Role of minerals in synthesis and metabolism of tissues; microelements, macro elements, minerals as

coenzymes, mechanism of excretion). 11. Metabolism of vitamins (Role of vitamins in metabolic processes, hydro soluble vs. liposoluble vitamins, absorption of vitamins, deposition in the body and vitamins excretion). 12. Antioxidative status (Free radical production during the metabolic processes, mechanism of free radicals action, effect of harm free radical in vivo antioxidants, antioxidative enzymes, nonenzymatic antioxidative molecules, oxidative stress). 13. Bioenergetics (Basic principles of bioenergetics and metabolic rate, brutto energy of food. digestible energy, metabolizable energy, specific dynamic action of food, resting energy metabolism, importance of ATP, efficacy of production processes, biocaloimetry, respiratory quotient and its interpretation). 14. physiology (Energetic metabolism during Neuromuscular aspect of exercise. Exercise effect on cardiovascular system. Effect of exercising on breathing system. 15. Physiology of oviposition (Composition of egg, egg formation as enriched egg-cell, oviposition, control of oviposition). 16. Physiology of lactation (Composition of milk in different animal species, mamogenesis, lactogenesis, metabolism of mammary gland). 17. Thermoregulation (Poikilotherms, homeotherms, hibernation, thermoreceptors, organisms defence of hypothermia and hyperthermia). 18. Physiology of skin (Physiological features of skin and mucous membrane, skin glands). 19. Physiology of reproduction (Hormonal regulation, male and female reproductive system, pregnancy). 20. Behaviour in domestic animals, memory and learning (The role of the hormone system in food intake, sexual behavior, parental behavior and learning. Immediate, working and long-term memory). x lectures independent independent 2.7.Comments: x seminars and assignments workshops ☐ multimedia x exercises and the internet 2.6.Format of ☐ laboratory on line in instruction: work with entirety nartial ementor learning field work (other) 2.8.Student responsibilities Class 1.8 Research Practical training 2.9. Screening student attendance work (name the Experimental Report Seminars proportion of ECTS work credits for each activity Seminar Essay conversation so that the total number essay of ECTS credits is equal Tests 3.2 Oral 4 Activity 1 to the ECTS value of Written the course) Project (other) exam Evaluation elements: 1) lectures attending, 2) participation during seminars, 3) lab exercises attending; 4) exercise and seminars attending; 5) continuous assessment; 6) final exam 1. lectures attending: During semester a student must attend 23 2.10. Grading and lecture lessons in order to gain minimum of 3 points. The evaluating student work in class and at the final maximum points from this evaluation element is 6. exam 2. **seminars attending**: During the course the student must attend 20 seminars in order to achieve a minimum of 4,8 points. The maximum points gained in this element is 6 points. After completion of the classes student can compensate absent

- seminar (which was previously justified, and compensation is granted) and points will be attributed to the other points. When a student compensates absentee classes in subsequent attempts, points will not be attributed.
- 3. lab exercises attending: During the course the student must be present at the 48 hours of lab exercises to get minimum of 4,8 points. The maximum points gained in this element is 6 points. After completion of the classes a student can compensate absentee exercise (which was previously justified, and compensation is granted) If it is compensated in the first attempt, points will be attributed to the other points. When a student compensates absentee classes in subsequent attempts, points will not be attributed.
- 4. activity on lab exercises and seminars: During the 60 hours of the exercise classes, the student must complete the assigned tasks. A student can earn up to 2 points per seminar (maximum 4 points). For six positive answers (oral and/or written) the student earns an additional 6 points. During the course of seminars and exercises, the student must achieve at least 5 points and a maximum of 10 points.
- 5. continuous assessment: During the course of Physiology of domestic animals II. two lab tests will be organized. The first test covers the physiology of the cardiovascular and respiratory systems, and the second test covers the physiology of digestion and excretion. At each test a student must achieve a minimum of 10 points in order to achieve the required 20 points. The maximum number of points in this element is 32 points. Students who do not achieve the necessary points during the teaching have the right to access test three times, which will be organized at a specific time.
- 6. **final exam:** The final exam begins with brief analysis of the results from the first five elements of evaluation for each student. On the final exam, the student responds to the questions orally. At the final exam, the questions are from every area of the curriculum that the student has attended the lectures and seminars, and each question is scored separately. The maximum number of points on the final exam is 40 points. Regardless of the credits from the first five elements of evaluation, student has to demonstrate minimal knowledge on the final exam in order to achieve the minimum of 24 points. If a student did not pass the final exam, it can be reassessed again at a specific time.

2. COURSE DESCRI		•			
2.1. Course objectives	The veterinary immunology course is taught to second-year veterinary medical students via fifteen didactic lectures. Students get familiar with basic immunology knowledge, inflectional immunology and allergology, basic knowledge of autoimmune diseases and immunomodulation. Veterinary immunology is an important preclinical course which enables student to understand other courses such as microbiology, pathology, pharmacology, internal diseases and infectious diseases, particularly regards to pathogenesis and infectious diseases diagnostics and hypersensitivity, carrying out of immunoprophylaxis and assessment of immune status. During the study students become familiar with vaccines and their usage, simple immunology diagnostic procedures and use of commercially available vaccines.

2. COUSE DESCRIP	TION				
The objective of the course is to acquire basic knowledge and skills necessary to perform physical examination of the domestic animals, compose the list of clinical problems and form the diagnostic plan. Furthermore, the objective of the course is to become acquainted with basic additional diagnostic methods and interpretation of laboratory and other additional findings. Knowledge and skills acquired through participation in this course prepare the students to be able to work in clinical departments and give them base for further learning and specialization in clinical disciplines. Preparation of domestic animals and little carnivores for clinical exam, recognition of internal diseases symptoms using inspection, palpation, percussion and auscultation, sense of smell and measuring (changes of body weight, retarded growth, weakness and syncope, anorexia and polyphagia, changes of behaviour, pain, hypothermia and hyperthermia, cough, dyspnoea, ascites, peritonitis and other causes of abdominal distention, cardiopulmonary arrest, sneezing and nasal discharge, abnormal heart sounds and heart murmurs, EKG, changed pulse qualities, oedema, liquidothorax, vomiting, regurgitation and dysphagia, diarrhoea, constipation, tenesmi, incontinence, melanea, haematochesia, ptyalism, joint effusion, lameness, tremor, ataxia, paresis, paralysis, stupor and coma, epileptiform seizures, polyuria, polydipsia, incontinence, enuresis, dyisuria, urinary tract obstruction, urinalysis, vaginal and preputial discharge, anaemia, cyanosis, jaundice, skin changes (alopecia, pruritus, lumps), lymphadenopathies, performing of clinical lab studies of animals according to					

	therapy preparation for application and i/m, s/c, i/v application, infusion therapy.						
2.2. Course enrolment requirements and entry competences required for the course	Anatomy of domest	Anatomy of domestic animals I, II and III, Histology and embriology

COMMUNICATION SKILLS IN VETERINARY MEDICINE

1. COURSE DECRIPTION – GENERAL INFORMATION						
1.1. Course teacher	Prof Danijel Labaš, Ph.D.,	1.6. Year of the study	3rd			
1.2. Name of the course	Communication Skills in Veterinary Medicine	1.7. ECTS credits	1			
1.3. Associate teachers		1.8. Type of instruction (number of hours L + S + E + e-learning)	L16+E6+6e-learning			
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course				
1.5. Status of the course	Obligatory subjects	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	/			
2. COURSE DESCRI						
2.1. Course objectives	The main goal of the course is to familiarize students with communication science as an interdisciplinary and integrative knowledge of its postulates in order to solve and improve their own communication, while the specific aims of the course are the acquisition of communication skills at interpersonal, social and media level, with the acquisition of knowledge of the correct relationship and use of verbal and nonverbal communication. Communication and relationship between veterinarians and patient owners, as well as other public (especially media), are extremely important and have a number of effects on treatment outcomes as well as satisfaction with treatment, compatibility, clinical outcome and quality of life, patient safety, teamwork, cultural sensitivity and reduced the number of complaints about the veterinarians work, and equally affect the presentation of a real image of the profession in public.					
2.2. Enrolment requirements and/or entry competences required	Enrolled integrated study.					
for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	Students will be familiar with the anthropological, communicational and psychological approach to multiple levels of communication. In particular, they will be able to properly use verbal communication and learn to properly evaluate and interpret nonverbal communication in different social and cultural environments, with particular emphasis on the relationship between the veterinarian and the client's owner. One of the more sensitive areas of biomedicine in terms of the importance of quality communication is access to communication in severe and incurable diseases, and particularly challenging opportunities for the clients to convey bad news, to recognize his emotional reactions, to listen actively, to include him in communication, to discuss the prognosis and the risk, assist in making a decision or encouraging its acceptance. But no less important is the public reaction to complaints about the profession, mostly in the media. Students will therefore be able to use the acquired communicative knowledge and develop the skills of critical observation, presentation and analysis of contemporary communication dynamics and models, particularly in interpersonal communication, as well as communication in public and the media, and will acquire the knowledge and skills required for public relations.					
2.4. Expected learning outcomes at	Students will be able to: analyze and compare various	types of communication	•			

the level of the course (3-10 learning outcomes)	correctly interpret the underlying concepts - intrapersonal, interpersonal, verbal, nonverbal, social and media communication; argue the importance of knowing the communication dynamics and challenges of communication in veterinary; to describe the role of verbal and non-verbal communication in everyday and business life and prepare to talk about giving diagnosis and therapy; analyze and interpret the verbal and non-verbal communication of their interlocutors; use the acquired knowledge about the relationship of interpersonal communication and communication in the business environment; to evaluate the quality of interpersonal communication; analyze and compare communication relationships in dialogue and persuasion in discussing the prognosis of treatment and risk communication; critically analyze and adopt the process of active listening in interpersonal diagnostic communication; to argue the reasons why it is necessary to know the communication dynamics in the everyday and business environment and how to use them in relation between veterinarian and owner of the client; critical approach to establishing communication with the public and the media and analyzing crisis communication strategies.

			every student opportunity to two autopsies at each is awar to 5 points. ((autopsy not car point= autopsy obut insufficient but insufficient but insufficient points= autopsy and terminists of theory and terminists of theory and terminists of the ory and	carry out , success ded with 0 D points= ried out; 1 carried out, knowledge chnique; 2		
			out, but insuknowledge of points= autops out, good know theory and tecpoints= autops out, very good kof theory and te	officient offici		

	points= autopsy carried out, excellent knowledge of theory and technique). The range of 5 to 10 points student achieves by combining ie. adding two values earned by autopsies. (eg. student carried out one autopsy at which he/she demonstrated good knowledge of theory and technique [3 points] and another one at which he/she demonstrated excellent knowledge of theory and technique [5 points], that way the student achieves 8 points from participation at exercises).	
Continuous knowledge checking	20 (Written preliminary exam from General pathology chapter "Inflammation" 10 points; Practical partial exam from autopsy 10 points)	32 (Written preliminary exam from General pathology chapters "Inflammation" 16 points; Practical partial exam from autopsy 16 points)
	Written preliminary exam from General pathology chapters "Inflammation", is made out of 32 questions, each point score from the written preliminary exam is awarded with 0,5 point.	
	Practical partial exam from autopsy is conducted by examining practical and theoretical knowledge of autopsy (0-9 points= student didn't demonstrate sufficient knowledge; 10 points= student demonstrated	

	minimal knowledge; 11 points= student demonstrated sufficient knowledge; 12 points= student demonstrated satisfying knowledge; 13 points= student demonstrated good knowledge; 14 points= student demonstrated above average good knowledge; 15 points= student demonstrated very good knowledge; 16 points= student demonstrated excellent knowledge).	
Final exam	24	40
Written and oral	(a student must show sufficient knowledge in order to gain minimal 24 points)	
TOTAL	60	100

Final exam:

Minimal conditions for passing the first, second, third and fourth evaluation elements are all summed up and they are worth 36 points all together. In order to take the final exam a student must gain the minimum of 36 points. The final exam consists of a written and oral part. The written part of the exam is in essay form. It lasts 40 minutes and consists of 5 questions. Each question is scored with a maximum of 5 points. A minimum of 15 points is required to pass the written exam, and minimum of 2 points per each question should be achieved. Each question will have guidelines to clarify what is expected in the answer. A maximum of 25 is possible to get from written part of the exam. After scoring a written part of the exam, students who achieve a minimum of 15 points can access the oral part of the exam. Students who do not achieve the minimum score (15 points) on the written part of the exam, receive a negative grade and will not be able to access the oral part of the exam. Questions at the oral part of the exam are on the same principe as essay type question in the written part. The grade on the final exam is the one derived from the points that student has collected from the written and oral part of the exam. The maximum amount of points in final exam is 40.

Final evaluation:

Regardless of a fact that a student gained the number of points from the first four evaluation elements on the basis of makeup preliminary exam or not, the same rules are valid for forming the final mark. The final mark is formed on

	the basis of total sum from all five evattending practicals, participation at percentage of the participation of the participation at percentage of the participation of t	oracticals, continue following table G 1 2 2 3	nuing know	-	res,

2.2. Course enrolment requirements and entry competences required for the course	Succesfully passed all the exams of 1st year of study and participation in lectures and excercises in Physiology of domestic animals I and II			
2.3. Learning outcomes at the level of the programme to which the course contributes	After succesfull Pathophysiology I mastering, student will be able to define the terms health and disease, describe endocrinopathies, describe pathophysiolgy of inflammation, describe disturbances in neural system function, master biological samples handling, determine serum protein, glucose concentrations and interprete the results			
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After succesfull Pathophysiology I mastering, student will be able to -define the terms health and disease, -describe endocrinopathies, -describe pathophysiology of inflammation, -describe disturbances in neural system function, -master biological samples handling, -determine serum protein, glucose concentrations and interprete the results			
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Lectures: Introduction in pathophysiology pathophysiology of inflammation and repair, 2 hours; Disturbances in acido-base balance, 2 hours; Pathophysiology of tumorogenesis, 2 hours; Disturbances in adrenal gland function, 2 hours; Disturbances in pituitary gland function and disturbances in pancreatic function 2 hours; Pathophysiology of central and peripheral neural system diseases 2 hours. Seminars: Oxidative stress and antioxidative system, 2 hours; Disturbances in hidrosolubile and liposolubile vitamines and minerals metabolism, 2 hours. Exercises: 41 hour; Changes in total protein concentration in serum, 2 hours; Diagnostic importance of acute phase proteins, 2 hours; Disturbances in			

	glucose metabolism, 2 hours; Laboratory diagnostic of acid-base balance, 2 hours.

PATHOPHYSIOLOGY II

1. GENERAL INFOR	MATION				
1.1. Course teacher	Prof. Romana Turk	1.6. Year of the study programme	third		
1.2. Name of the course	Pathophysiology II	1.7. Credits (ECTS)	6,5		
1.3. Associate teachers	Prof. Mirna Robić, Associate Prof. Maja Belić, Assistant Siniša Faraguna, DVM	1.8. Type of instruction (number of hours L + S + E)	39+6+50		
1.4. Study programme (undergraduate, graduate, integrated)	Integrated graduate and postgraduate study	1.9. Expected enrolment in the course			
1.5. Status of the course	obligatory 1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRIP					
2.1. Course objectives	The course objective is gaining knowledge on mechanisms involved in development of pathophysiological processes in individual organs and organ systems on molecular and cellular level and tissue and organs levels which providing understanding the course of disease and basis for understanding clinical courses. Overall consideration of pathophysiological mechanisms enables students to develop sense for integrative approach to pathological process at the whole organism level. In addition, the objective of the course is to develop skills in laboratory diagnostic of pathological processes and interpretation of changes in laboratory findings that could help in diagnosis of				
2.2. Course enrolment requirements and entry competences required for the course	Darticipation in course Pathophysiology I (lectures, seminars, exercises).				
2.3. Learning outcomes at the level of the programme to which the course contributes	Students are enabled to describe digestive system pathophysiology, describe disturbances in hepatic and biliary function, define disturbances in carbohydrate, fat and protein metabolism, describe renal diseases pathophysiology, describe disturbances in blood and hematological system functions and heart diseases, and describe disturbances in respiratory system functions. In addition, students will gain skills in performing biochemical and hematological laboratory diagnostics and interpretation of laboratory findings to be used in understanding the mechanisms and course of pathological process.				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successful mastering, student will be able to: -describe and explain pathophysiology of digestive tract, liver and biliary system diseases -define metabolic disturbances - describe and explain kidney disease pathophysiology - describe and explain blood and hematological system disturbances and heart diseases - describe and explain respiratory system disorders - determine bilirubin concentration, and evaluate jaundice mechanism, determine liver enzymes activity and evaluate liver status, determine lipid concentration and evaluate lipid metabolism - perform urinalysis and interpret results - perform and interpret laboratory evaluation of kidney function - perform hematological analysis and interpret results				

- perform and interpret laboratory evaluation of hemostasis								
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Disturbances in carbohydrate, fat and protein metabolism (4 hours), pathophysiology of liver and biliary system diseases (6 hours), pathophysiology of hemopoietic system (4 hours), disorders of hemostasis (2 hours), pathophysiology of digestive system diseases (10 hours), pathophysiology of cardiac function and mechanisms of shock (6 hours), pathophysiology of respiratory system diseases (3 hours), pathophysiology of renal diseases (4 hours). Seminars (6 hours): Individual students presentation on specific topics in mechanisms of diseases Practicals: lipid and lipoprotein disorders (2 hours), urine analysis (2 hours), bilirubin metabolism disorders (2 hours), clinical enzymology (2 hours), laboratory evaluation of kidney function (2 hours), introduction to hematopoietic system disorders (2 hours), hematological analyses – blood cells counting (2 hours), determination of sedimentation rate and packed cell volume (2 hours), determination of hemoglobin concentration and calculation of erythrocyte indices (2 hours), determination of reticulocytes count (2 hours), morphological changes of erythrocytes (2 hours), morphology of developmental stages of leukocytes (2 hours), determination of WBC and morphology changes of leukocytes (2 hours), differential cell count (2 hours), determination of eosinophils count and importance of changes (2 hours), differential WBC count (2 hours), interpretation of changes in total blood cells in reptiles (2 hours), interpretation of morphology changes of blood cells (2 hours), changes in blood cells morphology in neoplastic diseases of hematopoietic system (2 hours), laboratory diagnostics of hemostasis disorders (2 hours), preparation and inspection of bone marrow slides (2 hours), laboratory evaluation of cerebrospinal fluid (2 hours), interpretation of laboratory findings (2 hours),							
2.6. Format of instruction:	Xlectures Xseminars and a workshops		as:	independent assignments multimedia and the nternet laboratory work with mentor (other)		2.7. Comments:

2.10. Grading and evaluating student work in class and at the final exam	Student work in class will be evaluated according to lectures, seminars and practical attendance and active participation in practicals and seminars. That way students can gain minimal 16 and maximal 28 points. Knowledge checking in written form can assure minimal 20 and maximal 32 points. To access the final exam students have to gain minimal points for attendance and knowledge checking. At the final exam, which will be in oral form, students will have to correctly answer the questions to gain minimal 24 or maximal 40 points. The final grade will be the sum of points gained by each criteria mentioned before. Grading scheme will be as follows: up to 59 points is grade F (insufficient), 60-68 points is grade E (sufficient), 69-76 points is grade D (sufficient), 77- 84 points is grade C (good), 85-92 points is grade B (very good) and 93-100 points is grade A (excellent).

PHARMACOLOGY

h				
1. GENERAL INFOR			1 -	
	Frane Božić	1.6. Year of the study programme	3.	
1.2. Name of the course	Pharmacology	1.7. Credits (ECTS)	6.5	
1.3. Associate teachers	Assistant Ena Oster, DVM	1.8. Type of instruction (number of hours L+S+E+e-learning)	45L + 35E + 5S	
1.4. Study programme (undergraduate, graduate, integrated)	Integrated	1.9. Expected enrolment in the course	-	
1.5. Status of the course	Obligatory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	-	
2. COUSE DESCRIP	TION			
2.1. Course objectives 2.2. Course enrolment requirements and entry competences required for the course	Preparing students for veterinary clinics where they can choose appropriate therapy for any disease diagnosed in vet patients as well as correct writing formulary. Passed exams from the first year of study and attended courses Physiology of domestic animals I. and II.			
2.3. Learning outcomes at the level of the programme to which the course contributes	Students will particularly learn to approach specific species and categories of animals individually, but to treat farm animals as a group, as well. As regard that an animal should be get rid of pain in any moment it suffers, students will learn mechanisms of pain occurrence and its importance as well as the meaning of "multimodal pain therapy" concept.			
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Based on knowledge gained upon the completed course and passed the exam "General and special pharmacology" students will be able to understand pharmacological basis of medical effects as well as species, age and other factors impacting on it. Besides, students will gain knowledge of effecting mechanisms of particular drug groups and will be able to choose the most appropriate drug (or drugs) indicated for specific disease or a pathological state. While doing so they will know to apply the drug in its optimal dose according to prescribed dose, while in the case of possible combination of a couple of drugs they will be aware of their mutual effects on each other (desirable or undesirable).			
2.5. Course content broken down in detail by weekly class schedule (syllabus)	1 General pharmacology and pharmacology (concept and medication nomenclature, curative preparations, basis of pharmacotherapy, distribution and destiny of medication in organism, pharmacokinetics, pharmacodynamics, mechanisms of medication effects, factors influencing medication effects, medication biotransformation, observing of medication effects, medication residuum, NOEL, ADI, MRL, carentia, medication listing); 2 Peripheral nervous system pharmacology (Chemical neurotransmission, cholinergic and andrenergic), receptors through the influence of which neurotransmitters act and mechanism of neurotransmitters activities, medications efficient to cholinergic and adrenergic neurotransmission); 3 Central nervous system pharmacology (Sedatives, general anaesthetics (injective and inhalation), dissocative anaesthetics, local anaesthetics, myorelaxines, opioid analgesics, anticolinergics, analeptics); 4 Pharmacology of heart and vascular system (Heart stimulators, antiarrhythmics, antihypersensitives, vasodilatators); 5 Pharmacology of urinary organs and reproduction (Diuretics, antidiuretics, acidotics and acalotics, uroantiseptics, reproduction pharmacology); 6			

Pharmacology of respiratory organs (Expectoranses, mucolitics, antitusics, bronchodilatators, breathing stimulators); 7 Pharmacology of digestive system (Emetics, antiemetics, antacids, procinetics, laxans, antidiaroics, anticimotics): 8 Anti-inflammatory and imunomodulative drugs (Nonsteroide antiinflammatory drugs (effects and side effects), steride anti-inflammatory drugs (effects and side effects), imunosupressives, imunostimulators); 9 Antimicrobial medications (Antimicrobial spectrum, pharmacodynamics, pharmacokinetics, application, resistance, side effects); 10 Beta lactams (Benzylpenicillin (Na, K, procain, benzatin), ampicillin and amoxicillin, inhibitors beta laktamase – clavuline acid, isoxasolyl penicillins, cefalosporines – I, II, III and IV generation); 11 Aminoglycosides, aminocyclitoles, polypeptides (Streptomicin, gentamicin, neomycin, amikacin, spectinomicin, polymixin B and E, zincbacitarcin); 12 Macrolides, lincozamides, tetracyclines (Erythromycin, tylosin, asitromycin, lyncomycn, tetracycline, oxytetracycline, doxycycline); 13 Phenicoli, kinolones, sulphonamides (Chloramphenicol, fluorphenicol, thiamphenicol, flumequin, enrofloxacin, norfloxacin; Sulfonamides - enteric and systematic); 14 Antimycotics (Grizeofluvin, nistatin, immidasotiasoles, amfotecirin B, terbifanin, iodine preparations and other); 15, Antiprosoics (Anticocxide medications – ionophorne antibiotics and other coxidiocides, antihystomonoses, antihemosphoridive drugs – diminazen, imidokarb): 16 Endoparasiticides – nematocides (Piperazin, organophosphates. tetrahydropirimidines, imidazotiasoles, benzimidasoles, avermectines and milbemicines); 17 Trematocides (BZM – albendazol and triclabendazol, subtituated phenols, salicylanides); 18 Cestoides (Arekolin, niclozamyd, bitionol, BZM, prasiquantel); 19 Ectoparasiticides (Piretrines, piretroides, OFS, carbamates, avermectines - milbemicines, amitraz, fipronil, insects growth and development inhibitors); lectures independent 2.7. Comments: seminars and assignments multimedia and the workshops 2.6. Format of exercises internet instruction: on line in entirety laboratory partial e-learning work with mentor field work (other) attending lectures attending exercises 2.8. Student attending seminars responsibilities participation at exercises and seminars continuous knowledge checking and final exam 2.9. Screening Class Practical 1,17 Research student work (name attendance training the proportion of Experimental 0 Report (other) ECTS credits for work each activity so that Seminar 0 0.65 Essay (other) the total number of essay ECTS credits is 2,08 Tests Oral exam 2,6 (other) equal to the ECTS Written exam Project (other) value of the course) Participation of students at exercises will be evaluated with short oral tests. Continuous knowledge checking will be done with preliminary written exams which will be organised during the semester at one exercise term. The preliminary exams will be divided in two parts. Students are obliged to pass 2.10. Grading and short oral tests and written exams in order to take the final exam. Regardless evaluating student of a fact that a student gained the number of points from the first four work in class and at evaluation elements on the basis of the makeup preliminary exam or not, the the final exam same rules are valid for forming the final mark. The final mark is formed on the basis of the total sum from all five evaluation elements: attending lectures, seminars, exercises, participation at seminars and exercises, continuous knowledge checking and final exam.

	Activity	Minimum number of points	Maximum n	umber of

2.12. Optional literature (at the time of submission of study programme proposal)	For each student of the Department there will be a Form for keeping records of his/her attendance of the lectures, exercises and seminars, with columns for evaluating his/her participation at seminars and exercises. In the part of continuous knowledge checking there will be the date of taking the preliminary exams, examiner's name and number of gained points.			
2.13. Quality assurance methods that ensure the acquisition of exit competences				
2.14. Other (as the proposer wishes to add)				

RADIATION HYGIENE

1. GENERAL INFOR	MATION				
1.1. Course teacher	Marinko Vilić, DVM, PhD, Professor	1.6. Year of the study programme	3		
1.2. Name of the course	Radiation hygiene	1.7. Credits (ECTS)	2.5		
1.3. Associate teachers	Miljenko Šimpraga, DVM, PhD, Full Professor Jadranka Pejaković Hlede, DVM, PhD Josip Miljković, DVM				
1.4. Study programme (undergraduate, graduate, integrated)	Integrated	ntegrated 1.9. Expected enrolment in the course			
1.5. Status of the course	Obligatory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIP					
2.1. Course objectives	At the Radiation hygiene course students will learn how to be able to (1) protect their selves and their associates from radioactive contamination and irradiation; (2) use detectors of ionising radiation and dosimeters, detect ionising radiation, determine its type and calculate the radiation dose (3) to use high frequency spectrum analyzer and radiofrequency meters and to calculate the exposure limits (4) protect the housings, animal habitats, domestic animals, animal feed and foodstuff from radioactive contamination and radiation (5) perform decontamination of animals, animal feed, water and other food of animal origin and check-up the success of decontamination; (6) evaluate radiation hygiene properties of food and feed; (7) evaluate the radiation risk of malignant diseases. Besides, the students will obtain the basic knowledge about ionizing and nonionizing (microwave) radiation effects on animals and humans. Both is necessary for course in radiology, nuclear veterinary medicine and for performing other activities in veterinary profession referring to electromagnetic radiation. Finally, without mastering this course, veterinarians are not legally allowed to perform X-ray examinations or examinations by application with radioactive isotopes (nuclear veterinary medicine). Neither is it allowed to				
2.2. Course enrolment requirements and entry competences required for the course	perform veterinary inspection or other things relating to animal hygiene. Physic and biophysics final exam, Physiology of domestic animals 1 final exam				
2.3. Learning outcomes at the level of the programme to which the course contributes					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successfully mastering the course students will be able to: 1) recognize the sources of ionizing radiation 2) describe the pathway of radioactive contamination and the biological effects of ionizing radiation 3) protect the animals, animal feed and foodstuff from radioactive contamination and radiation 4) perform decontamination of animals, animal feed, meat, milk, water and check-up the success of decontamination

2. COUSE DESCRIP					
2.1. Course objectives	Students will get knowledge of the most important causative agents of animal infectious diseases as well as on basic microbiological techniques for their isolation and identification which could be used in practice. They will get special skills in taking and sending of clinical materials to a microbiological laboratory. They will get acquainted with methods of culturing microorganisms, with preparing specimens for optical microscope and with staining procedures for bacteria, and also how to prepare fresh, living preparations (uncoloured) for dermatophytosis diagnostics. They will master the methods of culturing of microorganisms on bacteriological media and get acquainted with properties of the most important species of bacteria, fungi and viruses. They will get acquainted with their morphologic, growing, physiologic and antigenic features important for making aetiological diagnosis of infectious diseases. They will get knowledge of microbiological drugs and possibilities of immunoprophylaxis.				
2.2. Course		eterinary immunology" and "Ger			
enrolment					
requirements and entry competences					
required for the					
course					
2.3. Learning	Students will get knowledges necessary for clinical courses, especially for				
outcomes at the	"Infectious diseases of do	mestic animals"			
level of the					
programme to which the course					
contributes					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Understanding the basic principles and techniques for isolation and identification of pathogenic microorganisms, and what diagnostic tests should be performed for their identification; Interpreting the meaning of the results of microbiological examination in the process of etiological diagnosis of infectious diseases; Information of classification the bacteria, viruses and fungi with genera and species important for veterinary medicine; Knowledge about specifics of microorganism grows, virulence properties of microorganism and disease it causes; Understanding what specimens should be collected and get acquainted with preventive and the repetitive strategies				
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Lectures: 1., 2. lesson <i>T</i> bacteria 1. part; 3., 4. less and Clostridium spp.; 7. spp.; 9., 10. lesson Mycolesson Poxviridae and F Paramyxoviridae; 15., 16.	acquainted with preventive and therapeutic strategies. Lectures: 1., 2. lesson Taksonomy of bacteria, History of microbiology, Spiral bacteria 1. part; 3., 4. lesson Spiral bakteria 2. part; 5., 6. lesson Bacillus spp. and Clostridium spp.; 7., 8. lesson Streptococcus spp. and Staphylococcus spp.; 9., 10. lesson Mycoplasmas, Klebsiella spp. and Yersinia spp.; 11., 12. lesson Poxviridae and Parvoviridae; 13., 14. lesson Orthomyxoviridae and Paramyxoviridae; 15., 16. lesson Papillomaviridae and Circoviridae; Seminars: 1., 2. lesson Spiral bacteria, Bacteroides, Fusobacterium, Francisella tularensis;			

	3., 4. lesson Chlamydias and rickettias, Salmonella spp. and Escherichia coli; 5., 6. lesson Mycobacterium spp., Listeria monocitogenes, Erysipelothrix rhusiopathiae, Actinobacillus spp.; 7., 8. lesson Herpesviridae and Picornaviridae; 9., 10. lesson Flaviviridae and Rhabdoviridae; 11., 12. lesson Reoviridae and Arteriviridae; 13., 14. lesson Retroviridae, Coronaviridae and Adenoviridae; Excercises: 1., 2. lesson Spiral bacteria; 3., 4. lesson Pseudomonas aeruginosa, Burkholderia pseudomallei, Burkholderia mallei; 5., 6. lesson Mycobacterium spp.; 7., 8. lesson Pasteurella multocida, Manheimia haemolytica, Haemophilus-Histophilus; 9., 10. lesson Escherichia coli, Klebsiella pneumoniae subs. pneumoniae; 11., 12. lesson Salmonella, Yersinia enterocolitica, Yersinia pseudotuberculosis; 13., 14. lesson Staphylococccus spp.; 15., 16. lesson Bacillus spp., Clostridium spp.; 17., 18. lesson Listeria monocytogenes; 19., 20. lesson Erysipelothrix rhusiopathiae, Corinebacterium-Arcanobacterium; 21., 22. lesson Streptococcus spp; 23., 24. lesson CPE of herpesviruses and arteriviruses in horses; 25., 26. lesson Fungi; 27., 28. lesson

Practicals:

Necropsy: necropsy technique and recognition of pathologic changes – 30h

Histopathology (30h):

Exercise 1.	- introduction: sample preparation, dyeing techniques	2h

	- fatty liver	
	- liver, cholestasis	
	- skeletal muscle, myofibrilar degeneration and coagulative necrosis	
	-Chronic, eosinophilic and fibrous interstitial hepatitis (parasitic hepatitis)	
Exercise 2.	- Multifocal miliary necrotizing and neutrophilic hepatitis (Sallmonelosis)	2h
	- Postnecrotic liver cirrhosis	
	-hepatitis, necrotizing, multifocal to confluent, acute (mainly centrolobular)	
	-Pulmonary artery branch thrombosis	
Exercise 3.	- Chronic vegetative valvular endocarditis	2h
	- Septic thrombotic endocarditis.	
	-Hemorrhagic infarction of the spleen (hog cholera)	
	-Embolic myocarditis	
	-Viral myocarditis (FMD)	
Exercise 4.	-hepatitis, granulomatous, multifocal (miliary), chronic (tuberculosis)	2h
	-Cutaneous actinomycosis	
Exercise 5.	-Skin; Sebaceous gland, nodular hyperplasia	2h

	- Skin; Squamous cell carcinoma -Skin; Papilloma - Testis; Seminoma	
Exercise 6.	-Lymph node; Lymphoma -Skin; Mast cell tumor (HE & Toluidin) -Mammary gland; Adenocarcinoma -Mammary gland; Benign mixed tumor	2h
Exercise 7.	-Fibrinous, partially necrotic pneumonia. -Embolic purulent bronchopneumonia -Enzootic pneumonia of pigs	2h
Exercise 8.	-Stomach; Gastric ulcer -Intestine; Parvovirosis -Kidney: FIP	2h
Exercise 9.	-Canine distemper (Lung, Urinary bladder) -Rabies	2h
Exercise 10.	-Mammary gland; Mastitis -Uterus; pyometra. -Glomerulo-interstitial chronic nephritis	2h
Exercise 11.	-Liver; Infectious canine hepatitis.	2h

		-Acute hemorrhagic lymphadenitis (hog cholera) -Purulent lymphadenitis	
	Exercise 12.	-Chronic verminous pneumonia (aelurostrongylosis) -Liver; Coccidiosis -Liver; Toxoplasmosis -Myocard; Sarcocystosis.	2h
	Exercise 13.	-Uremia (Kidney, tongue))	2h
	Exercise 14.	-Repetition	2h
	Exercise 15.	-Test	2h

		1
	Written preliminary exam	
	from Pathology of skin is	
	made out of 32 questions.	
	To pass this test student	
	must reach a minimal	
	score of 10 points,	
	maximum being 16 points.	
	To obtain minimal score	
	student should correctly	
	answer 20 questions, since	
	every correct answer is	
	awarded with 0.5 points	
	(20x0.5=10 minimal	
	points). It is important to	
	notice that incorrect	
	answers on this test are	
	awarded with negative points (every incorrect	
	11 1 1	
	answer nullifies one	
	correct answer). The total	
	number of points scored at	
	this test is gained by	
	subtracting number of	
	incorrect answers from	
	correct ones. Unanswered	
	questions will be omitted.

	(a student must show sufficient knowledge in order to gain minimal 24 points)	
TOTAL	60	100

Final exam:

Minimal conditions for passing the first, second, third and fourth evaluation elements are all summed up and they are worth 36 points all together. In order to take the final exam a student must gain the 36 points. The final exam consists of a written and oral part. Written part of the final exam will last for 60 minutes, and consists of two parts. The first part is recognition of macroscopic pathological changes (duration: 20 minutes). In this part, 10 photographs of pathological processes (one photo at 2 minute intervals) will be displayed on the LCD projector. For each photo, two questions will be asked, and the student can get maximum of 0.5 point per photograph (points are awarded in range from 0.25 to 0.5). The second part of the written exam is in the essay form. Each question will have guidelines to clarify what is expected in answers. Students will briefly describe some pathological processes. This part of the exam contains of 4 questions, and each question will be scored with a maximum of 5 points. A minimum of 15 points is required to pass the written exam, while a maximum of 25 points is possible. After scoring the written part of the exam, students who received a minimum number of points (15) have the right to access the oral part of the exam, while those who have a lower number of points receive a negative grade and do not have the right to access the oral part of the exam. Additional oral questions are askeed according to the same principle as the essay type of questions in the written part, and it is possible to achieve a maximum of 15 points in the oral part. The grade of the final exam is the one derived from the points that student has collected from the written and oral part of the exam. The maximum amount of points in final exam is 40.

Final evaluation:

Regardless of a fact that a student gained the number of points from the first four evaluation elements on the basis of makeup preliminary exam or not, the same rules are valid for forming the final mark. The final mark is formed on the basis of total sum from all six evaluation elements, according the following table

Points	Grade
up to 59	1 (F)
60-68	2 (E)
69-76	2 (D)
77-84	3 (C)
85-92	4 (B)
93-100	5 (A)

2.1. Course objectives	knowledge on peculiarities of natural and intensive breeding of different game species. They will gain the basic knowledge on natural sciences, animal welfare, handling and breeding as well as on legislative, Croatian and EU regulations of the aforementioned activities. The subject curriculum is formed in a way to inspire the bioethical approach to the game breeding, which is based on the newest welfare understanding and traditional game breeding system. Attendants can meet the essentials of selective work in game breeding, the models of intensive breeding of large and small game and guidelines for the game production. In practical part students gain knowledge and competency of game breeding, keeping and management particularly by sex and age determination, estimation of game breeding value, social structure evaluation, breeding technology comprehension (natural and farm breeding of small and large game) with etiologic base and welfare satisfaction at breeding and handling with stress on loading, hunting, binding, dazing, transport, weighing, operator risk determining etc. In that way the attendants will be able to master specialised skills and competence in expert activities of planning, conduction and improvement of intensive and natural game breeding.

 2^{nd} preliminary exam (10 questions) 10 points min. – 16 points max. (1 question is worth 1.6 points)

Preliminary exams in online form.

ORAL EXAM: 24-40 points

(5 questions: 1 question is worth 8 points)

To take the final exam a student must gain minimal 16 points from attending lectures and exercises and participation at exercises and minimal 20 points from continuous knowledge checking.

The total sum of points gained from all evaluation elements is expressed by a grade from 1 to 5 (the following table).

Points	Grade
up to 59	1 (F)
60-68	2 (E)
69-76	2 (D)
77-84	3 (C)
85-92	4 (B)
93-100	5 (A)

At the Department there will be a Form for each student for keeping records of his/her attendance of the lectures and exercises with a column for evaluating his/her participation exercises. In the part of continuous knowledge checking there will be: the date of taking the preliminary exam, the name of the lecturer and the number of gained points.

At the final exam the Form with the total number of points gained from all evaluation elements will be presented to the lecturer

Types of activities	Minimal number of points	Maximal number of points
Attending lectures	3	6
Attending exercises	8	12
Participation at exercises	5	10
Continuous knowledge checking	20	32
Final exam	24	40
Total	60	100

In order to take the final exam a student must gain minimal 36 points from attending and participation at lectures and exercises and from continuous knowledge checking.

TION							
Diagnosis and treatment of the diseases of gastrointestinal, cardiovascular, respiratory and urinary system, as well as diagnosis and treatment of neurological, endocrine, hematopoietic, neoplastic, and skin diseases in domestic animals. Basics of veterinary emergency and critical care medicine. 2.2. Course enrolment requirements and entry competences required for the course							
During studying internal medicine students acquire and consolidate their medical logics based on medical premises gained in study of preclinical subjects. Such an approach enables forming of experts disposed to new knowledge and independent on stereotypes. They check their approach by laboratory diagnostic aids. Upon acquisition on teaching matter a student will be able to examine the patient, interpret the clinical signs and detect symptoms of disease from the history, establish a proper problem list and differential diagnoses list, decide on the use of laboratory parameters to confirm the diagnosis, and finally determine the proper treatment of the diagnosed diseases at the level of general veterinary.

	attending the further clinical courses, as well as those belonging to public veterinary health.
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Students will be able to establish a diagnosis based on disease history and clinical examination. Students will have adequate knowledge to make a list of differential diagnoses and to decide which advanced clinical methods should be used to establish a final diagnosis. Students will be able to interpret the results of various findings. Students will be able to select an adequate treatment according to symptoms and diagnosis. Based on the trend of various findings students will be able to modify the treatment. Based on outcomes, students will be able to establish a prognosis.
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Skin diseases. Inflammatory diseases of the skin. Pruritus. Allergies. Otitis externa. Dermatology of cats. Immune-mediated skin diseases. Burns, hypovitaminoses, endocrine imbalances. Hematopoietic system diseases and clinical pathology. Anaemia. Polycythaemia. Leukopenia, leucocytosis, leukaemia. Coagulopathies, haemorrhagic diatheses. Blood types, blood transfusion. Interpretation of laboratory results – enzymes. Interpretation of laboratory results – metabolites. Gastrointestinal system diseases. Clinical signs and diagnostics of digestive system diseases. Mouth, pharynx, and oesophagus. Gastric dilatation volvulus. Gastritis, gastric ulcer. Inflammatory bowel disease. Enteritis, colitis, ileus, constipation. Hepatic diseases – hepatitis, portosystemic shunts, hepatic lipidosis. Pancreatic diseases – acute and chronic pancreatitis, exocrine pancreatic insufficiency. Urinary system diseases. Clinical signs and diagnostics of urinary tract diseases. Acute renal failure. Chronic renal failure. Lower urinary tract inflammation, urolithiasis, FLUTD, urethral obstruction in cats. Cardiovascular system diseases. Clinical signs of cardiovascular system diseases and diagnostic work-up. Congenital heart diseases. Valvular diseases. Cardiomyopathies. Arrhythmias. Pericardial diseases. Respiratory system diseases. Rhinitis, sinusitis. Diseases of larynx and trachea. Bronchitis. Pneumonias. Pneumothorax, pleural effusions. Endocrine diseases. Diagnostics of endocrine diseases. Diabetes insipidus. Hypothyroidism, hyperthyroidism. Hypoadrenocorticism, hyperadrenocorticism. Diabetes mellitus. Diabetic ketoacidosis and other complication of diabetes. Insulinoma and other hormonally active turnours. Nervous system diseases. Seizures. SRMA and other inflammatory diseases of nervous system. Spinal diseases. SRMA and other inflammatory diseases of neoplastic diseases. Paraneoplastic syndrome. The most frequent tumours – lymphoma, mast-cell tumour, melanoma, hemangiosarcoma, mammary gland adenocarcinoma. Life quality assessment

Swine diseases. Anaemia in piglets, hypoglycaemia in piglets, multiple degeneration of muscles and myocardium in swine. Peptic ulcer. Specific vitamin and mineral deficiencies.

Equine diseases. Clinical signs, diagnostic work-up and treatment of equine diseases. Equine endocrine diseases. Equine cardiology: overview of most common equine heart diseases. Recurrent airway obstruction (equine asthma) and other respiratory diseases. Colic. False colic and urinary tract diseases. Exercise (paralytic) myoglobinuria and equine atypical myopathy.

Neurology of large animals. Dermatology of large animals. Small mammal diseases. Selected diseases of ferrets: insulinoma, FADC, lymphoma, cardiomyopathies. Selected diseases of rabbits and rodents (malocclusion, gastric stasis, pneumonias, urolithiasis, vestibular disease).

	4. Continuous k	nowledo	ge checking					
	5. Final exam							
	Attending lectures 3-6 points (15 lecture hours. 1 lecture hour is worth 0.4 point). A student must attend minimal 8 lecture hours.							
	Attending exercises 8-12 points (8 programmes. 1 programme (double period) is worth 1.6 points). A student must attend minimal 6 programmes (12 hours).							
	Participation at exercises 5-10 points – participation at exercise will be evaluated with short oral tests with 5 points at least two times.							
	Continuous knowledge checking 20-32 points							
2.10. Grading and	1st preliminary exam (10 questions) 10 points min. – 16 points max. (1 question is worth 1.6 points)							
evaluating student work in class and at the final exam	2 nd preliminary exam (10 questions) 10 points min. – 16 points max. (1 question is worth 1.6 points)							
	Preliminary exams in online form.							
	ORAL EXAM: 24-40 points							
	(5 questions: 1 question is worth 8 points)							
	To take the final exam a student must gain minimal 16 points from attending lectures and exercises and participation at exercises and minimal 20 points from continuous knowledge checking.							
	The total sum of points gained from all evaluation elements is expressed by a grade from 1 to 5 (the following table).							
	Po	oints		Gr	ade			
		to 59			(F)			
	60)-68			(E)			
	69	9-76		2	(D)			
	77	'- 84		3	(C)			
		5-92			(B)			
	93	-100		5	(A)			

At the Department there will be a Form for each student for keeping records of his/her attendance of the lectures and exercises with a column for evaluating his/her participation exercises. In the part of continuous knowledge checking there will be: the date of taking the preliminary exam, the name of the lecturer and the number of gained points.

At the final exam the Form with the total number of points gained from all evaluation elements will be presented to the lecturer

Types of activities	Minimal number of points	Maximal number of points
Attending lectures	3	6
Attending exercises	8	12
Participation at exercises	5	10
Continuous knowledge checking	20	32
Final exam	24	40
Total	60	100

In order to take the final exam a student must gain minimal 36 points from attending and participation at lectures and exercises and from continuous knowledge checking.

1.5. Status of the course	Compulsory	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	-			
2. COUSE DESCRIP	TION					
2.1. Course objectives	Within the course framework, the students will get acquainted in detail with the hormonal regulation of the sexual cycle of domestic animals, including phases, a clinical signs of sexual cycle and the artificial insemination of domestic animals. Students will also be thoroughly familiarized with oogenesis, the mechanism of ovulation, fertilization, nidation and placentation, as well as pregnancy, pregnancy diagnostics and pathology of pregnancy and the phases of parturition, physiology and pathology of puerperium, spermiology, and udder.					
2.2. Course enrolment requirements and entry competences required for the course	Students are required to previously complete the courses of the General Veterinary Pathology and Special Veterinary Pathology. They should be able to take the animal's history, restrain it in a safe way and perform a general clinical examination. The student should be able to propose diagnostic examinations and understand the principles of the therapeutical approach which could be performed on the gynaecologic patient. Also, students should have basic knowledge of sexual hormone structure and function, anaesthesiology protocols and aseptic and antiseptic principles.					
2.3. Learning outcomes at the level of the programme to which the course contributes	To be able to independently take the gynaecologic history and perform gynaecological / andrological examinations (including udders) of female and male animals, including rectal palpation and ultrasound checking, in order to define the animal's reproductive status. To be able to timely perform artificial insemination, understand the principles of semen collection and insemination dose, and perform basic semen tests. To be able to properly assist labour and apply obstetrical methods in case of need. To check post-parturient animal and determine if the puerperium of the animal is running physiologically; and if not, to be able to assess the proper therapeutic approach.					

	<u> </u>						
	To asses general conditions at the farm level which influence optimal animal reproduction and milk production, overall animal production at the farm level, animal welfare and safety of animal products.						
	to explain the neurohormonal regulation of sexual cycles of domestic anim					nimals;

						lecture hours; each	
2.10. Grading and evaluating student work in class and at the final exam	-		•			it least 30 lecture l	
	By attending practicals the student gains 8.8 (8)-12 points (105 exercise hours; each exercise hour equals a 0.11 coefficient). Students must attend at least 80 exercise hours.						
	The activity at	the exercis				points; the activity ractical assignmen	
	evaluated through short oral exams, field tasks and practical assignments. There will be a progress test performed during the semester consisting of 10 questions and performed in written form.						
		-		_	-		

The progress test brings 32 points (each question equals a 3.2 points), 20 points being the minimum required to pass. Taking the progress test during the main term is compulsory (missing the main term needs to be justified).

3 additional progress test terms will be announced, as per agreement with students.

(A passing grade for) the progress test is a requirement in order to register for the final exam. However, the progress test is not a requirement for a signature in the grade book. If the student fails the progress test 4 times, he/she needs to take the whole course over again. In case he/she doesn't take the progress test or fails it 4 times, an additional term is possible if the student representative writes an official request to the respective Vice Dean. The Course leader makes the final decision.

In order to take the final exam, a student must gain a minimum of 16 points by attending lectures, practicals and through activities during practicals, and at least 20 points from continuous knowledge assessments.

The final exam consists of 10 oral questions and in total brings up to 40 points (a minimum of 24 points to pass). The total sum of points achieved from the above-mentioned elements is expressed in the final mark (1-5), 1 being a fail.

Points	Grade
up to 59	1 (F) insufficient
60-68	2 (E) sufficient
69-76	2 (D) sufficient
77-84	3 (C) good
85-92	4 (B) very good
93-100	5 (A) excellent

SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY I

1. GENERAL INFORMATION						
1.1. Course teacher	Assoc. prof. Tomislav Babić /	1.6. Year of the study	7 th (the seventh)			
1.1. Course teacher	Prof. Mario Kreszinger	programme				
1.2. Name of the course	Surgery, orthopaedics and ophthalmology I	1.7. Credits (ECTS)	7			
1.3. Associate teachers	Assoc. prof. Tomislav Babić; Prof. Dražen Matičić F. C. A.; Prof. Boris Pirkić; Prof. Mario Kreszinger; Prof. Dražen Vnuk; Assoc. prof. Ozren Smolec; Assoc. prof. Nika Brkljača Bottegaro DECVSMR; Assis. Prof. Marko Pećin; Assis. Prof. Andrija Musulin; Valentina Plichta, PhD; Petar Kostešić, PhD; Ana Smajlović, DVM; Petra Dmitrović, DVM; Mirta Vučković, DVM; Niko Ivkić, DVM; Marija Mamić, DVM; Katarina Miljak, DVM; Marija Lipar, DVM, PhD; Mirna Abaffy Kirin, DVM	1.8. Type of instruction (number of hours L+S +E+e-learning)	30+0+60			
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course	25			
1.5. Status of the course	Compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRIP	TION					
2.1. Course objectives	10. Fluid therapy and acid-base balance 11. Disorders of coagulative mechanism and haemostasis 12. Injuries and wounds; Definition, etiology and classification. Wound healing and basic principles of treatment. 13. Surgical procedures of burns, frostbite and injuries caused by electricity, radiation and chemicals 14. Surgical techniques of suturing 15. Suture materials 16. Bandages, dressings, drains 17. Essential reconstruction surgeries (sutures, flaps, grafts) 18. Introduction in veterinary dentistry					
2.2. Course enrolment requirements and entry competences	Upon gaining of provided skills and knowledge a student is capable of taking history, treating and restraining the animal in a safe and a human way, teaching the others the same techniques, and performing the whole clinical examination. The student is ready to give his/her opinion of the other additional diagnostic					

required for the course	examinations which are to be done on the surgical patient. In the postoperative period a student can determine the way of treatment (pain control, treatment with antibiotics, physical therapy and other was of treatment). By this programme a student acquires knowledge of performing the surgical and anaesthesiologic protocol and taking records in the book of a patient in a way understandable to his/her profession and the public. He/she is well educated to correctly apply the principles of sterilization of surgical equipment and principles of aseptic surgery. The student is capable to safely apply sedation, local and general anaesthesia and to estimate and control the pain. He/she is ready to recognise conditions that require euthanasia and perform it humanely with the understanding the emotional state of the owner. The student can apply techniques of first aid.
2.3. Learning outcomes at the level of the programme to which the course contributes	To be able independently take history, treating and restraining animal in safe and a human way and performing the whole clinical examination. To be ready to give his/her opinion of the other additional diagnostic examinations which are to bed one on the surgical patient. To be able to determine the way of treatment in postoperative period (e.g. pain control, treatment with antibiotics, physical therapy and other what was required). To be able to perform the surgical and anaesthesiologic protocol and taking records in the book of a patient in a way understandable to his/her profession and the public. To able to correctly apply the principles of sterilization of surgical equipment and principles of aseptic surgery. To be able to safely apply the sedimentation local and general anaesthesia and to estimate and control the pain. To be able to recognise states indicating terminal conditions which require euthanasia and make it in human way with understanding the emotional state of the owner.
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	to take history, treating and restraining the animal in a safe and human way and perform the whole clinical examination; to propose the other additional diagnostic examination which are needed to get objective status of the surgical patient; to determine the way and content of treatment in postoperative period of patient; fill in surgical and anasthesiologic protocol and taking record in the book of patient in a way understandable to his/her profession and the public; to administer safely the sedation, local and general anaesthesia and to estimate the control of the pain; to recognise states indicating appropriateness of euthanasia and make it in a human way undestandable to the emotional state of the owner; to apply techniques of first aid giving in case of bleeding, wounds, burns and frost bite injuries; to perform techniques involving workup and bandaging the wounds, imobilisation and hemostasis; to assist during surgical procedures, honering the principles of asseptic surgery; to be able to conservatively and surgically workup small wounds; to be acquainted with basic techniques of stiching of organs and tissues and to choose adequate suture material;

2.5. Course content broken down in detail by weekly class schedule (syllabus)	Introduction to surgery, organisation of work at the clinics. Premises and equipment of the surgical clinics; Surgical instruments; Procedure, approach, inhibition and refutation of surgical patients; History and surgical propedeutics; Principles of surgical asepsis and antisepsis. Sterilization and disinfection; Introduction to anaesthesiology. Premedication and sedation. Anaesthesia classification. Local and regional analgesia. Intravenous anaesthesia; inhalation anaesthesia; Shock: Diagnostics and treatment; Fluid therapy and acid-base balance; Disorders of coagulative mechanism and haemostasis; Injuries and wounds; Definition, aetiology and classification. Healing and basic principles of treatment; Surgical procedures of burns, frost bite and injuries caused by electricity, radiation and chemicals; Surgical techniques of suturing; Suture materials; Bandages, dressings, drains; Infections and the use of antibiotics in surgery; Essential reconstruction surgeries (stitches, lobes, grafts), Introduction to veterinary dentistry					
2.6. Format of instruction:	□ lectures □ seminars and workshops □ exercises (practicals) □ on line in entire □ partial e-learnin □ field work	,	independent assignments multimedia and the internet laboratory work with mentor		2.7. Comments:	
2.8. Student responsibilities	1. Lectures attendance 2. Exercise attendance 3. Active participation at exercises 4. Mid term exams 5. Final exam					
2.9. Screening student work (name	Class attendance	0,42	Research		Practical training	0,84
the proportion of	Experimental work		Report		Activity during practical training	0,7
ECTS credits for each activity so that	Essay		Seminar essay		(other)	
the total number of ECTS credits is equal to the ECTS value of the course)	Tests	2,24	Oral exam	1,4	(other)	
	Written exam	1,4	Project		(other)	
2.10. Grading and evaluating student work in class and at the final exam	 Lecture attendance During the semester student must be present on 15 hours of lectures (from the amount of 30 hours) to obtain a minimum 3 final points during the semester. Maximum obtained number of final points from this element is 6. Exercise (practicals) attendance During the semester student must be present on 48 hours of excercises (from amount of 60 hours) to obtain minimum 9.6 points during the semester. Maximum obtained number of points from this element is 12. Sixty hours of exercice are divided in 8 days: 6 hours - surgical instruments, surgical asepsis and antisepsis, 6 hours- suture materials, suturing, knotting 8 hours- clinical rotation, practical work with patient 					

- 4. 8 hours- clinical rotation, practical work with patient
- 5. 8 hours- clinical rotation, practical work with patient
- 6. 8 hours- clinical rotation, practical work with patient
- 7. 8 hours- clinical rotation, practical work with patient
- 8. 8 hours- practical work with patients during night duty and /or weekend duty
- 3. Active participation at the practicals
 Participating actively at the practicals students can gain 75 points max.,
 what brings them 10 final points. Points for performing the following tasks:
 - a) 25 points (first exercises thematic participation is not evaluated, second exercises thematic participation is not evaluated, third exercises practical clinical work during clinical rotation 5 points max.; fourth exercises practical clinical work during clinical rotation 5 points max., fifth exercises practical clinical work during clinical rotation 5 points max., sixth exercises practical clinical work during clinical rotation 5 points max., seventh exercises practical clinical work during clinical rotation 5 points max., eighth exercises practical clinical work during clinical rotation will not be evaluated, but could be replaced with practical work in extracurricular time eg. afternoon round, night round or weekend round,) = keeping records of anaesthesiologic protocols in an orderly manner. please find instructions to fill in the Anaesthesiologic protocol at LMS.vef.
 - b) 25 points (first exercises thematic participation is not evaluated, second exercises thematic participation is not evaluated, third exercises practical clinical work during clinical rotation 5 points max.; fourth exercises practical clinical work during clinical rotation 5 points max., fifth exercises practical clinical work during clinical rotation 5 points max., sixth exercises practical clinical work during clinical rotation 5 points max., seventh exercises practical clinical work during clinical rotation 5 points max., eighth exercises practical clinical work during clinical rotation will not be evaluated, but could be replaced with practical work in extracurricular time eg. afternoon round, night round or weekend round,) = keeping surgical record form in an orderly manner. Please find instructions to fill in the Patient protocol at LMS.vef.
 - c) 25 points (first exercises thematic participation is not evaluated, second exercises thematic participation is not evaluated, third exercises practical clinical work during clinical rotation 5 points max.; fourth exercises practical clinical work during clinical rotation 5 points max., fifth exercises practical clinical work during clinical rotation 5 points max., sixth exercises practical clinical work during clinical rotation 5 points max., seventh exercises practical clinical

work during clinical rotation - 5 points max., eighth exercises – practical clinical work during clinical rotation will not be evaluated, but could be replaced with practical work in extracurricular time eg. afternoon round, night round or weekend round) = active participation in the work with patients.

Students must obtain minimally 5 final points (37.5 points x coefficient 0.1333). Active participation at exercise during surgical rotation will be continuously evaluated.

4. Mid term exams

During the semester students will be checked by 3 mid term exams. Each mid term exams will contain 11 questions from following topics.

- The surgical asepsis and surgical instruments (https://lms.vef.hr)
- The suture materials and techniques of suturing (https://lms.vef.hr)
- The bandages and draines and infection of surgical patients, containing antimicrobe prophylaxis (https://lms.vef.hr)

Within this element of valuation it is possible to obtain maximum 32 final points (33 answers x coefficient 0.9696).

Student must achieve minimum of 7 points per mid term exam to obtain total of 21 points (21 x coefficient 0.9696= 20 final points).

A student who does not gain minimal 21 points during the semester from mid term exam has a right to take 2 makeup mid term exams only those which failed. A student who passes the makeup mid term exam with minimally 7 correct answers from eleven (11) has a right to take the final exam.

5. Final exam

Minimal conditions for passing the first, second, third and fourth (lecture attendance, practicals attendance, practicals and seminars activity, mid term exams) evaluation element are summed up and they are worth 37.6 points all together. Maximum points to gain from all 4 elements is 60.

Questions in the final exam will be put in a way that a student can answer in written and oral form. In the written form there will be 20 questions divided in 5 groups (20 points), 12 of which must be answered correctly in order to take the oral exam. The maximum number of points that can be gained at the oral exam is 20 points (five questions), where maximally 4 points can be gained for 1 correct answer (0-4). The minimal number of points a student must gain at the final exam is 24 (12 points minimal at written and 12 as well at oral exam). The maximal number of points on written exam together with oral exam can be 40 points. If student does not gain minimum 12 points on written exam one can not take oral exam. If student does not gain minimum 12 points in oral exam, one fails.

The final grade from a course programme is expressed in quantity, by a numeric point-system value and by a grade adequate to its value in points, from 1 to 5. Student is marked by grade 1 in case she/he did not master the programme course successfully, in other words grade 1 means insufficient standing.

2.11. Required literature (available in the library and via	Title	Number of copies in the library	Availability via other media			
other media)	https://lms.vef.hr					
2.12. Optional literature (at the time of submission of study programme proposal)	1.Theresa Fossum - Small Animal Surgery (2018.) 2.Jorg A. Auer; John A. Stick – Equine Surgery (2018.) 3.Ames N.K. – Noordsy's Food Animal Surgery (2014.) 4. Grimm K.A., at all – Veterinary Anesthesia and Analgesia (2015.)					
2.13. Quality assurance methods that ensure the acquisition of exit competences	During the semester there will be three (3) mid term exams organised at the time of exercises each containing eleven (11) problems or questions. Each correctly solved problem or correctly answered question is worth one (1) point. A student must gain the total of 21 points from mid term exams (minimal 7 from each mid term exam) in order to earn minimal 20 points. (21 times 0.9696). The maximal number of points a student can gain from this evaluation element is 32 points. A student who does not gain minimal 21 points during the semester from mid term exam has a right to take a makeup mid term exam. The two makeup mid term exams will be organised upon completion of the teaching in the semester. To pass makeup mid term exam student has same criteria as for primary mid term exams.					
2.14. Other (as the proposer wishes to add)						

SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY II

1. GENERAL INFOR	MATION			
1.1. Course teacher	Assist. Prof. Andrija Musulin	1.6. Year of the study programme	4	
1.2. Name of the course	Surgery, Orthopaedics and Ophthalmology II	1.7. Credits (ECTS)	5,5

1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course		
1.5. Status of the course	compulsory	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)		
2. COUSE DESCRIP				
2.1. Course objectives	Objective is to introduce the student with the basic knowledge in ophthalmology, abdominal and thoracic surgery, and oncology of domestic animals.			
2.2. Course enrolment requirements and entry competences required for the course	Upon gaining of provided skills and knowledge a student is capable of recognising particular diseases of head and neck in small and large animals (dehornisation in bovine) and starting the basic treatment. The student is acquainted with the diseases of chest, bases of their treatment and stabilisation of the patient with the chest diseases as well as with indication for referring such patients to referral clinics. He/she is trained to recognise particular types of hernia and basis of their treatment. The student is acquainted with indications for castration in particular animal species, with the way of performing the castration and post castration complications. He/she can recognise diseases of digestive system and of urinary and sex organs in dogs and cats, undertake the stabilisation of the patient and estimate indication for its referring to a referral clinic. The student is acquainted with the basic laparotomy in ruminants and possibilities of treatment of diseases of digestive system. He/she can recognise diseases of abdomen in horses evident in colica, approach a team treatment of the colica, undertake the stabilisation of the patient and estimate indication for a surgical treatment and its referring to a referral clinic. A student is acquainted with basic postulates of surgical approach and techniques of treatment of oncologic patients, and with a necessity of multidiscipline consideration of treatment modality. Upon gaining of knowledge and skills the student will be able to recognise diseases of eye in small and large animals treated during the teaching lessons, to start the treatment and treat them in emergency case, to estimate indication for a surgical treatment and for its referring to a referral clinic.

2.10. Grading and evaluating student work in class and at the final exam	Attending lectures 24 HOURS 3 – 6 points 1 double period is worth 0.5 point (1 period = 0,25 point) In order to gain minimal 3 points a student must attend 6 lectures out of 12			out of 12		

Attending seminars

6 HOURS 5 – 6 points

1 seminar is worth 1 point

In order to gain minimal 5 points a student must attend 5 seminars out of 6

Attending exercises

24 HOURS 5 – 6 points

1 double period is worth 0.5 point (1 period = 0.25 point)

In order to gain minimal 5 points a student must attend 10 exercises out of 12

Participation at exercises

5 - 10 POINTS

Participation at seminars will be evaluated during the presentation of seminar works with 2.5 – 5 points.

Participation at exercises will be evaluated with short oral testa with 2.5-5 points.

Continuous knowledge checking

20 - 32 points

1st PRELIMINARY EXAM - 20 points max.

2nd PRELIMINARY EXAM - 12 points max.

Checking of knowledge with preliminary exams will be held after completed thematic units at seminares and practically done at exercises.

Final exam

WRITTEN AND ORAL 24 - 40 POINTS

In order to take the final exam a student must gain minimal 18 points from attending and participation at lectures, exercises and seminars, and minimal 20 points from continuous knowledge checking.

Final evaluation points

According to the sum of gained points and the following table:

Points	Grade
up to 59	1 (F)
60-68	2 (E)
69-76	2 (D)
77-84	3 (C)
85-92	4 (B)
93-100	5 (A)

	percentage of online		
2. COUSE DESCRIPT	instruction (max. 20%)		
	SURGERY ORTHOPEDICS AND OPHTHALMOLOGY		
	Students widen their ophthalmology knowledge and skills acquired in eighth semester. Practical exercises are focused at ocular examination (tonometry, biomicroscopy and fundoscopy), and also students can observe nasolacrimal canal irrigation in dogs. Students start during exercise practical dentistry course. First, they repeat oral cavity anatomy and physiology. Afterward, they learn dentistry instruments and equipment and principles of dentistry diagnostic. They will be able to recognize which condition they can treat and which they have to send to referral clinic. Students will know and principles of periodontal diseases. After listening of this subject, students will know to determine and mark each tooth and to examine oral cavity. They must recognize and treat some diseases, primary cremor dentium, paradontosis and gingivitis. Principles of teeth extraction will be presented. Students had anesthesia in seventh semester, but they have also clinical cases where it is necessary to perform anesthesia to the end of study. In this subject, critical points of canine and feline anesthesia, preanesthetic exam of patients and anesthesia of emergency patient will be presented. Student will be ready to perform less complicated cases of anesthesia under supervision of teacher. Basic principles of fracture management and practical work with implants at plastic models of bone will be presented. Students will have basis to attend specialised osteosynthesis course in the future.		
	INFECTIOUS DISEASES OF DOGS AND CATS		
2.1.Course objectives	Students will widen acquired knowledge about differential diagnosis and infectious disease treatment in dogs and cats. Students will also learn to perform objective diagnosis of infectious diseases by simple methods available at daily basis. Students will also learn about new drugs, registered for treatment of infectious diseases (immunomodulatory drugs and antiviral drugs) and general prophylaxis and immunoprophylaxis.		
	PATHOLOGY		
	The most often dermatological diseases and skin tumors will be presented to students and the importance of cytological an pathohistological diagnosis in final diagnosis will be focused as factor for determination of prognosis and therapeutic efficiency. Tumor and skin biopsy samples collecting will be repeated as important step to achieve diagnosis.		
	RADIOLOGY (X-ray, Computed Tomography) AND ULTRASOUND		
	Students will be able to recognize and describe the most often diagnosis of bones and joints, and thoracic and abdominal diseases using different diagnostic imaging modalities (radiography, basic CT and ultrasonography).		
	CLINICAL PHARMACOLOGY		
	Students will repeat acquired knowledge of pharmacology at clinical cases and it will be also add some chapters which were not sufficiently studied in colegium Pharmacology. The focus will be put on rational use of antibiotic and antiparasitic and correct drug use in cats.		
2.2.Course	Enrolled tenth semester		
enrolment requirements and	Enrolled tenth semester		

ontry competences	
entry competences required for the	
course	
2.3.Learning	
outcomes at the level	
of the programme to	
which the course	
contributes	
	to perform ocular examination and determine indication of nasolacrimal canal irrigation to diagnose and treat specific diseases of oral cavity
	- to conduct less demanding anesthesia in dogs and cats
	to solidast look domanding anostribula in dogs and sate
	- to recognize specific implants for osteosynthesis and to know indication for their use
2.4.Learning	- to recognize specific histopathological samples of dermatological diseases and the most often tumors in dogs and cats
outcomes expected at the level of the course (4 to 10 learning outcomes)	- to perform objective diagnosis of infectious diseases by simple methods available at daily basis and to treat infectious diseases using of different drugs
	- individual approch to general prophylaxis and immunoprophylaxis
	- to recognize the most often diagnosis of bones and joints, and thoracic and abdominal cavity diseases using different diagnostic imaging modalities
	- to rational use antibiotics and antiparasitics and to use correctly drugs in cats
	- to evaluate nutritional status, food and feeding procedure and to correct meal during dietary management of specific disease
	SURGERY ORTHOPEDICS AND OPHTHALMOLOGY (16 hours)
	1.Tonometry 2.Biomicroscopy and fundoscopy 3. Nasolacrimal canals irrigation in small animals 4. Anatomy and physiology of oral cavity 5.Instruments and equipment for dentistry 6. Diagnostic in dentistry and interpretation of radiographs of oral cavity 7.Basic of periodontal diseases 8. Principles of teeth extraction 9.Special consideration about canine and feline anesthesia 10. Anesthesia of emergency patients 11. Principles of osteosynthesis- practical approach
2.5.Course content	INFECTIOUS DISEASES OF DOGS AND CATS (6 hours)
broken down in detail by weekly class schedule (syllabus)	1.Infectious gastroenteritis of dogs and cats 2. Retroviral infections of dogs and cats (new therapy modalities) 3. Rapid diagnostic assay in dogs and cats 4. Imunomodulators and antiviral agents 5. General prophylaxis of infectious diseases 6. Imunoprophylaxis
	RADIOLOGY AND ULTRASOUND (6 hours)
	1.Fractures, arthrosis, elbow dysplasia, OCD, hip dysplasia, pattelar luxation and spondylosis deformans 2. Diaphragmatic hernia, pneumonia, mitral insuficiency, dilatative cardiomiopathy, hypertrophic cardiomiopathy in cats 3. Metastasis, pyometra, gravidity, hernia, ileus, urolithiasis, intraabdominal tumors

	PATHOLOGY (6 hours)					
	1. Citology in dermatology 2. Definition of morphology of primary and secondary skin lesions 3. Patomorphology and patohistology of the most common dermatologic diseases: atopic dermatitis, bacterial, viral and parasitic dermatitis 4. Tumors definition and morphology (histopathologic examination, tumor grading and tumor margins) 5. The most common skin tumors (histiocytoma, mast cell tumor, lymphoma) 6. The mammary gland tumors (incidence, pathohistologic tumor classification and determination of malignancy grade					e most al and nologic on skin gland

2.10. Grading and evaluating student work in class and at the final exam	minimal 11 p	ooints. The se. A attend andance in	maximal value dance of one he exercise (minir	is 18 pour of e	(totally 45 hours) to colle oints, if a student attend xercise brings 0,4 point hours) is criterium for	
	Active participation in exercise					

Active participation in exercise is continuously evaluated during 12 practical exercises with grades from 1 to 5. Maximal value is sum of grades during 12 exercises (12 x 5) 60 and for this maximal value student can collect 10 points. Student must collect minimally sum of 30 to collect 5 points. 10/60 = 0,1667. Sum of grades must be multiplied with coefficient 0,1667 to calculate final score for active participation in exercise. Student which did not collect minimal sum of grades can not collect index signature and must attend next year subject gain.

Tests

Student can collect in continuous assesment maximal 32 points. Student must collect minimal 20 points to be able to attend final exam, but not to collect index signature. The continuous assesment test is consisted of 32 questions. One correct answer is one point. Questions are from Pathology (8), Clinical pharmacology (8), Clinical nutrition (8) and Radiology and ultrasound (8). Time of continuous assesment test will be arranged with subject coordinators.

Final exam

The final exam can get maximally 40 points to student. A written form of exam is consisted of 40 questions (30 Surgery orthopedics and ophthalmology and 10 infectious disease). Each correct answer gets 1 points to student. Student must collect minimal 24 points or 60% of answers from one subject (18 from Surgery orthopedics and ophthalmology and 6 from infectious disease). In the case that student did not collect minimal value from one subject, student will attend next time only to exam from this subject.

Type of instructio n (number of hours L + S + E + e- learning)	13+36+41
1.4.Study programme (undergraduate, graduate, integrated)	Integrated Undergraduate and Graduate University Study of Veterinary Medicine in English	1.10. xpected enrolmen t in the course	
1.5.Status of the course	Elective	1.11. Level of applicati on of elearning (level 1, 2, 3), percenta ge of online instruction (max. 20%)	
2. COUSE DESCRIPT	ION		
2.1. Course objectives The subject is offered as an elective in the tenth semester involved in specialized education in the track "Farm animals and horses". The content is presented to students mainly in the form of seminars and exercises and is a			

	supplementation to a complete fundamental preclinical and general clinical education. Practical training is held on clinical patients and the stud farms. Students are trained to diagnose and treat the most common problems and diseases in horses. This course qualifies involved students with competent knowledge in the field of equine medicine.
2.2. Course enrolment requirements and entry competences required for the course	Enrolled tenth semester.
2.3. Learning outcomes at the level of the programme to which the course contributes	The course contributes to higher competencies in the field of equine medicine, continuing education and an extended program of integrated undergraduate and graduate board of reproduction and breeding management, internal diseases, surgery, orthopaedics and ophthalmology, diagnostic imaging, infectious diseases, equine veterinary pathology, nutrition and dietetics, clinical pharmacology and toxicology and parasitology. This course presents an important part in the education of a new generation of students since they will obtain knowledge and skills in equine medicine on a more elaborate level than so far.
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	REPRODUCTION AND OBSTETRICS Monitoring of follicular dynamics in mares by ultrasound examination, hormonal examination and getting to know hormonal references during the cycle of mare. Optimal time of mating and insemination in mare. Artificial insemination of mares with fresh, chilled diluted and frozen semen, different regimes (treatments) for applications of hormonal preparations (light and progestagen treatments, prostanglandins in oestrus cycle, use of GnRH, hCG) - advantages and disadvantages; Endometrium evaluation (cytology, bacteriology, biopsy). Swabbing technique and evaluation of the cytological result, sending and analysing method followed by EU conditions, endoscopic examination of the uterus. Specifics of Andrology examination in stallions, special spermiology, collection and evaluation of stallion semen. Early ultrasound and laboratory diagnosis of pregnancy, monitoring of fetal development using Doppler, diagnostics and reduction of twins, diagnosis and monitoring of high-risk pregnancy; Irregularities in the structure of the sexual organs (congenital and acquired). Embryonic loss, abortions, twin pregnancy, endometritis and endometriosis, functional disorders of ovarian function and ovulation; Vitality foal determination at birth (APGAR), intensive care of new-borns, foal watch and nursing of orphaned foals, procedures and treatment of new-borns with weak vitality, procedures and treatment of prematurely born foals, treatment of specific new-born; Retention of meconium, septicaemia, diarrhoea, neonatal isoeritrolysis and other. INTERNAL DISEASES Students will expand their knowledge of gastrointestinal diseases (endoscopic approach, colics, colitis X, ulceration of the digestive tract), and respiratory diseases. Diseases of the cardiovascular system, diseases of the blood and blood-forming organs, urological diseases (urolithiasis), and dermatological and neurological diseases. Special emphasis will be put on gastrointestinal endoscopy, diagnostic and therapeutical approach to equine coli

Students will learn how to approach an injured horse and treat different types of wounds. Also, students will expand their knowledge in the field of equine anaesthesia and analgesia with the emphasis on sedation, general intravenous and local anaesthesia in the field conditions. Emphasis will be put on diagnosis, surgical decision and preoperative management approach to urgent equine colics discomfort. Students will learn how to assess pain in horses and how to choose an appropriate analgesia protocol during postoperative care. Students will be able to perform postoperative care and recognise complications after colic surgery.

For the purpose of performing lameness diagnostics, it is essential to gain knowledge of clinical examination of the lame horse, diagnostic analgesia, and special methods of lameness diagnostics (ultrasound, CT, MR, arthroscopy, tenoscopy, nuclear scintigraphy and kinetic and kinematic analysis). Also, the students will master pathogenesis, diagnostics and treatment of soft tissues, joint and bone lesions of the limbs and axial skeleton in sport horses. In the ophthalmology course, students will be acquired with the most common eye diseases, ocular examination techniques and treatments.

In equine dentistry students will be acquired with principles of examination of the oral cavity, performing prophylactic teeth floating procedures in the field condition and treating basic pathological diseases in the oral cavity. INFECTIOUS DISEASES

During the practical work, students will learn how to obtain the most suitable clinical samples required for objective diagnostic procedures of infectious diseases in horses. Furthermore, they will be provided with information about referral diagnostic methods and referral laboratories for the particular infectious disease of the horses. The acquired knowledge will prepare students for correct interpretations of the diagnostics test results and knowledge about general prophylaxis will give them sustained knowledge for the implementation of control measures in the prevention of infectious diseases. After finishing the course students will be also able to make appropriate immunization schedules for horses.

RADIOLOGY AND ULTRASOUND

During practical work, students will be trained for independent radiography of the extremities in horses and setting radiographic diagnosis.

PARASITOLOGY

Students are introduced to the development, morphology and determination of internal parasites as an etiological factor in the development of clinical signs in the most common invasive diseases of horses. They are also trained to perform a parasitological examination and determine the most common horse parasites in which prevention and treatment are an integral part of animal health care. In those invasive diseases for which diagnosis is possible in a specialized laboratory, they can properly take the material after the suspicion and deliver it to a specialized laboratory with all the necessary information.

PATHOLOGY - SELECTED CHAPTERS

Students will expand their knowledge of the horse necropsy technique and recognition of pathological changes in diseases that are relatively common in horses and foals.

CLINICAL PHARMACOLOGY

During the conservatorium students will be introduced to the typical diseases of this noble species of animals and the possibility of their treatment.

CLINICAL TOXICOLOGY

Students will be able to recognize poisoning, approach the treatment of poisoned animals, assess the success of treatment and to sample material

for diagnostic tests in an appropriate manner, primarily for toxicological analysis.

NUTRITION AND DIETETICS IN HORSES

Introducing future veterinarians with feeding as an important factor in preventing the emergence of a significant number of diseases and as a possible additional therapy in the treatment of sick horses.

OBSTETRICS AND REPRODUCTION

1. Breeding management of mares: Oestrus and its detection, Endocrinology of the equine oestrous cycle. Monitoring of follicular dynamic in the mare with ultrasound examination. Optimal timing of mating and insemination in mare. 2. Assessment of mare fertility, Contagious equine metritis: Recommendations for disease prevention and control during the breeding season. Examination and swabbing of mares and stallions for CEM 3. Assessment of stallion fertility and breeding activity. Collecting and evaluating stallion semen. 3. Artificial insemination in mares with diluted, chilled and frozen semen: timing and techniques. 4. Management of the postpartum mare 5. Gynaecological surgery in mares 6. Pregnancy diagnosis - early ultrasound examination and resolving problems during pregnancy 7. Infertility in mares: embryonic loss, twin pregnancy, endometritis and endometriosis, ovulation failures 8. Neonatal care 9. Foal illnesses.

SURGERY, ORTHOPAEDICS AND OPHTHALMOLOGY

1. The first-aid approach to equine trauma; 2. Application of sedation, general intravenous and local anaesthetics in field conditions: 3. Acute abdomen (diagnosis, surgical decision, preoperative management); 4. Postoperative care and complications related to abdominal surgery; 5. Application of manipulative tests and diagnostics analgesia in lameness diagnostic: 6. The most common diseases and treatment of equine limbs 7. Treatment of soft tissue diseases: tendons, ligaments, bursae; 8. The basic principles in the treatment of palpebral and corneal injuries and inflammation of the uveal tract 9. The basics of equine dentistry and dental prophylaxis.

broken down in detail by weekly class schedule (syllabus)

2.5. Course content

INTERNAL MEDICINE

1. Gastrointestinal diseases (gastrointestinal endoscopy; diagnostic and therapeutic approach to equine colic, colitis X; gastric and duodenal ulcers in horses and foals). 2. Respiratory diseases (tracheal aspirate indications, techniques and interpretation; bronchoalveolar lavage; obstructive pulmonary disease; exercise-induced pulmonary haemorrhage; bronchodilators and corticosteroids in aerosol form; immunomodulators in respiratory diseases therapy). 3. Diseases of the cardiovascular system (arrhythmias; congenital cardiac defects; valvular diseases; endocarditis; pericarditis). 4. Diseases of the blood and blood-forming organs (anaemia; polycythemia; thrombocytopenia; hemostasis; vasculitis; lymphoproliferative and myeloproliferative diseases). 5. Urological diseases (urolithiasis). 6. Dermatological diseases. 7. Neurological diseases (painful back, vestibular syndrome).

INFECTIOUS DISEASES

- 1. Review of the incidence of infectious diseases of horses and making of differential diagnosis based on epizootiological data and clinical symptoms; 2. Procedures in horse infectious diseases diagnostics a sampling of
- adequate diagnostic material for microbiological, molecular and immunological diagnostic methods; 3. Treatment of infectious diseases of the horses; 4. General prophylaxis of infectious diseases of the horses; 5. Immunoprophylaxis of infectious diseases of the horses immunization schedules.

RADIOLOGY AND ULTRASOUND

	T . =-					
	1. The procedures of radiological and ultrasound diagnosis. Diagnosis of pathological conditions of the distal phalanx. 2. Diagnosis of navicular disease 3. Pathology of the metacarpophalangeal joint and carpus 4. Pathology of metacarpophalangeal joint and tarsus 5. Pathological conditions of stifle 6. Asthma and pneumonia; PARASITOLOGY 1. The common parasites of GI tract – coprological examination, dehelmentization and treatment 2. Samples shipment and laboratory diagnostics 3. Dehelmentization schedule of foals and young horses 4. Dehelmentization schedule of adult horses PATHOLOGY – SELECTED CHAPTERS 1. Incidence of diseases and causes of death in horses, specifics of dissection of horses; 2. Pathomorphological changes in disorders of the stomach and intestines position in horses; 4. Pathomorphological changes in metabolic diseases of horses. CLINICAL PHARMACOLOGY 1. Treatment of colic in horses (spasmolitycs, nonsteroidal anti-inflammatory drugs) 2. Pharmacotherapeutic basics: prevention and treatment of laminitis (aseptic inflammation of the hoof dermis) 3. Prevention and treatment of asthma in horses (anti-inflammatory drugs, bronchodilators). CLINICAL TOXICOLOGY 1. Clinical cases of pesticide poisoning in horses (case study) 2. Clinical cases of poisoning horses with herbs 3. Clinical cases of hymenoptera stings and snake bites. NUTRITION AND DIETETICS IN HORSES 1. Dietetics in horses 2. Feeding in the prevention of disease 3. Therapeutic feeding.					
2.6. Format of instruction:	X lectures X seminars and workshops X exercises On line in entirety Partial elearning X field work X independent assignments X multimedia and the internet X laboratory X work with mentor Other)					
2.8. Student responsibilities	Students ar	e oblige	d to particip	ate lectur	es, seminars and ex	xercise.
2.9. Screening student work (name the	Class attendanc e	1.26	Researc h		Practical training

each activity so that the total	Essay		Seminar essay		(other)	
number of ECTS credits is equal	Tests	2.24	Oral		(other)	
to the ECTS value of the course)	Written exam	2.8	Project		(other)	
2.10. Grading and evaluating student work in class and at the final exam	1 progress test – 30 questions (5 pathology, 5 infectious diseases, 5 radiology, 5 pharmacology and toxicology, 5 nutrition and dietetics in horses, 5 parasitology). Final written exam:					

A passing grade for the progress test is a requirement in order to register for the final exam. However, the progress test is not a requirement for a signature in the grade book. If the student fails the progress test 4 times, he/she needs to take the whole course over again. In case he/she doesn't take the progress test or fails it 4 times, an additional term is possible if the student representative writes an official request to the respective Vice Dean. The Course leader makes the final decision.

Maximal: 40 Minimal: 24

Final written exam: 30 questions (10 from internal medicine, 10 from surgery, orthopaedics and ophthalmology, 10 from reproduction, obstetrics and neonatology)
1,333 point per question.

1.1. Oddise teacher	Zdolec, PhD	study programme	semester		
1.2.Name of the course	Food Hygiene and	1.7.Credits	12.5		
	rof. Lidija Kozačinski,	(ECTS) 1.8.Type of	60+105+0		
1.3.Associate teachers	PhD, prof. Željka Cvrtila, PhD, assoc. prof. Nevijo Zdolec, PhD, Tomislav Mikuš, PhD, Marta Kiš, DVM	instruction (number of hours L + E + S + e- learning)			
 1.4.Study programme (undergraduate, graduate, integrated) 	intergrated	1.9.Expected enrolment in the course			
1.5.Status of the course	obligatory	1.10.Level of application of elearning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIPTION					
2.1.Course objectives	In addition to the general aim and tasks, the education of future doctors of veterinary medicine has a special aim. It is the task of lecturers to teach the students how to perform independently all expert activities, and to apply the scientifically verified standards of hygiene and technology within the frameworks of the veterinary inspection and evaluation of food safety and quality. Of course, this is possible only by means of education in the field of application of process methods (technology) in the production of food products of high quality and hygiene standards, all in the context of improvement of veterinary public health.				
2.2.Course enrolment requirements and entry competences required for the course	A condition for attending the course: attended and passed all couses in the first three years of study. Attended all courses from the fourth year of study and passed exams in the subject: Internal Medicine (VII semester) and Game management and breeding (VII semester).				
2.3.Learning outcomes at the level of the programme to which the course contributes	Course Food Hygiene and Technology is an important segment of veterinary public health, which allows students to engage with the acquired knowledge in tasks and activities of veterinarians in the area of food inspection, official controls and systematic monitoring of the safety of food of animal origin. Students are trained to carry out veterinary inspections and controls of food, from its production, processing and transport.				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	By the completion of the course students should be able to: - explain the structure, purpose and methods of veterinary inspection, control and monitoring of production, processing and distribution of food of animal origin - identify hazards and risks in the production and distribution of food of animal origin - interpret the results of food quality assessment and food safety - distinguish the type of food according to the production process - define acceptability factors of food for human consumption - incorporate legislation in the preparation and analysis reports in the field of hygiene and technology of food of animal origin				

- evaluate production hygiene procedures in the facility and process control indicators

Lectures:

1. Introduction; Food hygiene and veterinary public health. 2. Slaughter processing. 3. Animal welfare in slaughterhouses. 4. Meat biochemistry and meat conditions. 5. Risk based meat inspection (MSAS). 6. Biological hazards - foodborne microorganisms and parasites. Alimentary infections and intoxications. 7. Biological hazards - sampling and analyses, standards, assessment. 8. Chemical-toxicological hazards in food chain. 9. Chemicaltoxicological hazards in food chain - sampling and analyses, standards, assessment. 10. Prerequisite programmes. 11. HACCP. 12. Official controls. 13. Meat quality and meat preservation. 14. Additives. 15. Carcass grading and meat processing. 16. Thermally processed meat products. 17. Thermally non-processed meat products. 18. Food fraud. 19. Milk and dairy products (trends in milk production, udder health, milking, legislation, controls). 20. Veterinary controls in milk production (hygiene, dairy microbiology and zoonoses, mastitis, quality and health requirements). 21. Chemical composition of milk (sensory and physico-chemical properties of milk, types of milk, nutritional value of milk and dairy products). 22. Hygiene and technology of production of dairy products (transport, processing). Heat treatment and microbiological risks. 23. Hygiene and technology of production of dairy products (fermented dairy products, condensed milk and milk powder, cream, butter). 24. Quality of dairy products. Packing material and packing of milk and dairy products. Additives. 25. Hygiene and technology of cheese production. HACCP in milk production. 26. Veterinary inspection of fish (quality and freshness assesment of fish, crabs and shellfish. Stunning of fish. Parasitic invasion in fish. Patogenic microorganisms. 27. Composition and quality of fish, crabs and shellfish (Structure and composition of fish, Classification and categorisation of fish, crabs and shellfish. Post mortem changes and fish spoilage. Blogenic amines and bio toxins in fish. 28. Hygiene and technology of production of fish products (Processing and veterinary-sanitary inspection in fish and fish product trade. Hygienic and technological standards of production and evaluation of quality of fish products). 29. Eggs (Hygiene and technology of egg production and processing). Honey (Production and quality of honey). 30. Other foodstuffs of animal origin and future food safety

2.5. Course content broken down in detail by weekly class schedule (syllabus)

Exercises:

guidelines.

- Transport to slaughter, Ante mortem examination, welfare in slaughterhouse, slaughterhouse constructing and equipment, slaughter processing,
- Meat inspection, Animal waste in slaughterhouse
- Food sampling; Sensorial analysis
- Water holding capacity, Meat pigments

	 Meat freshness assessment Microbiological examination of food. Interpretation of results. Microbiological cleanliness of surfaces. Determination of pork fat quality Antimicrobial resistance of food bacteria Additives and spices. Sensorial, chemical and microbiological analysis of meat products Milk freshness and fat content Density of milk. Milk adulteration Hygienic quality of milk Sensorial, chemical and microbiological analysis of dairy products Eggs Fish and fish products HACCP Microbiological standards Field work at pig, cattle and poultry slaughterhouse Field work at meat, milk and egg processing facilities

INFECTIOUS DISEASES OF DOMESTIC ANIMALS

1. GENERAL INFORMAT	ION		
1.1. Course teacher	Assoc. Prof. Vladimir Stevanović	1.6.Year of the study programme	5 th
1.2.Name of the course	Infectious Diseases of Domestic Animals	1.7.Credits (ECTS)	13,5
1.3.Associate teachers	Full Prof. Zoran Milas; Full Prof. Nenad Turk; Assoc. Prof. Vilim Starešina; Full Prof. Ljubo Barbić; Assoc. Prof. Zrinka Štritof; Assoc. Prof. Suzana Hađina; Assoc. Prof. Josipa Habuš; Assoc. Prof. Vladimir Stevanović; Assist. Prof.Matko Perharić, PhD, DVM; Iva Zečević, DVM, Iva Benvin, DVM	1.8.Type of instruction (number of hours L+S+E+e-learning)	75 + 0 + 105 + 0
1.4.Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9.Expected enrolment in the course	At least 50% of lectures and 80% of exercises
1.5.Status of the course	Compulsory	1.10.Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	
2. COUSE DESCRIPTION			
2.1.Course objectives	Study of Infectious diseases of domestic animals includes perception of occurrence, spreading and eradication of infectious diseases, diagnostics and application of measures and procedures in prophylaxis of infectious diseases in order to eradicate them. Cognition on natural focus of infectious diseases, infection containers and causative agents of zoonoses are particularly important in animal health maintenance as well as for lives of stock breeders and veterinarians working with animals. Students are to gain practical knowledge on diagnostics of infectious diseases occurred at one or more animal species by epizootiological, clinical, microbiological, serological, pathalogicoanatomical and therapeutic method, as well as by biological experiment. In that way attendants are enabled to be single-handed in practice and to comprehend all the procedures taken elsewhere as support in objective diagnostics. In case of infection it is important for a veterinarian to be competent in using the right procedure while taking the samples for diagnostics and to use the statutory prophylactic measures.		
2.2.Course enrolment requirements and entry	Attended and passed all dattended all courses from		nd 3 rd year of study;

competences required for the course			
2.3.Learning outcomes at the level of the programme to which the course contributes	The course Infectious diseases of domestic animals will give understanding of infectious disease outbreaks, transmission and control, diagnostics and preventive and control measures. Emphasis will be given to natural focal infectious diseases, reservoirs and zoonotic pathogens in order to preserve animal health, as well as health of farmers and veterinarians. Students should acquire knowledge and practical skills in diagnostics of infectious diseases of animals only using epizootiological, clinical, microbiological, serological, pathological and therapeutic methods, as well as biological experiments.		
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successfully overcoming the course student will be able to: - recognize factors which are conditioning infection, spreading and completion of infectious disease - diagnose infectious disease or declare suspicion to infection - select the most appropriate samples and sampling for objective diagnosis of infectious disease - understand and evaluate laboratory test results - select further procedures with infected animal/s - perform etiologic treatment - perform legislation measures for control/eradication of infectious disease - recommend and install control and prevention measures for infectious diseases which are not regulated by the law		
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Curse content IX semester Hours 2 Introduction to epizootoilogy 2 Infection, Macro-organism defence mechanisms, Development of active immunity 2 Source of infection 2 Routes for spread of infectious diseases, Port of entry for pathogens 2 Susceptibility to infection 2 Prevention of infectious diseases 2 Immunoprofilaxis 2 Classification of infectious diseases; Stages of an acute infectious disease 2 Canine viral and bacterial gastroenteritidies I 2 Canine viral and bacterial gastroenteritidies II 2 Feline immunodeficiency virus infection, Feline leukaemia virus infection, Feline infectious peritonitis 2 Feline parvovirus infection, Feline respiratory disease, Feline infectious anaemia 2 Canine distemper, Infectious canine hepatitis, Canine infectious respiratory disease, Canine herpesvirus infection Exercises

Lectures

Hours	Lectures topics
2	Equine infectious anaemia, African horse sickness
2	Equine influenza, Equine viral arteritis; Equine viral rhinopneumonits
2	West Nile virus infection, Bovine viral diarrhoea – mucosal disease
2	Contagions equine metritis, Infectious abortion caused by Salmonella, Equine coital exanthema
2	Strangles; Rhodococcus equi infection
2	Bovine enzootic bronchopneumonia (Crowding disease), Infectious bovine rinotracheitis, Malignant catarrhal fever, Infectious bovine keratoconjunctivitis (Pink eye)
2	Viral diarrhoea in calfs, Winter dysentery, Lumpy skin disease

2	Enzootic bovine leucosis, Bovine spongiform
2	encephalopathy Classical swine fever, African swine fever
2	Swine erysipelas, Greasy pig disease, Streptococcal and Staphylococcal infections in swine
2	Swine dysentery, Transmissible gastroenteritis of swine, Colibacillosis in piglets, Edema disease
2	Enzootic pneumonia (Mycoplasmal pneumonia), Glässers disease, Pleuropneumonia in pigs
2	Porcine circovirus associated diseases, Porcine reproductive and respiratory syndrome, Inclusion body rhinitis, Progressive atrophic rhinitis
2	Caprine arthritis and encephalitis, Ovine pulmonary adenomatosis; Contagious ecthyma, Sheep and goat pox
2	Bluetongue, Foot rot in sheep, Caseous lymphadenitis
2	Rabies, Auyeszki disease
2	Anthrax, Tetanus, Botulism
2	Enterotoxemia, Black leg, Malignant edema
2	Tularemia, Listeriosis
2	Leptospirosis, Q-fever
2	Brucellosis, Melitococcosis
2	Tuberculosis, Paratuberculosis, Actinomycosis, Botryomycosis
2	Foot and mouth disease; Vesicular stomatitis
2	Ringworm, Warts (Papillomatosis), Eperythrozoonosis
2	Myxomatosis, Rabbit haemorrhagic disease, Pasteurellosis in rabbits

Exercises

Hours	Exercises topics
3	Differential diagnosis in equine enteric infections and
	equine respiratory infections
3	Differential diagnosis in equine infectious abortion;
	Immunoprophylaxis of infectious disease in equine
3	Differential diagnosis in bovine infectious respiratory
	diseases; Immunoprophylaxis of infectious disease in
	bovine
	Differential diagnosis in bovine infectious abortion;
	Differential diagnosis in bovine enteric infections
3	Differential diagnosis of swine infectious abortion;
	Differential diagnosis in swine enteric infections
3	Differential diagnosis of infectious respiratory diseases of
	swine; Immunoprophylaxis of infectious disease of pigs
3	Differential diagnosis of caprine and ovine infectious
	diseases
3	Differential diagnosis in neurological infectious disease

During a course of two semesters, a student has to gain a minimum of 8 points while the maximum available number of points during two semesters is 12.

3. Active participation in the practicals

A student can collect a minimum of 5 points and a maximum of 10 points by actively participating in the exercises. The verification of the activities in the practicals is carried out by oral continuous monitoring of the preparedness for the topics of the exercises during the IX and X semesters. To achieve this, the student must collect a minimum of 2.5 points in each semester (one question carries 2.5 points). The oral examination is conducted without notice during the practicals. With a highlighted activity during professional clinical work, a student can earn 2.5 points, replacing one question in the exercises.

4. Colloquium

After the first semester, one oral colloquium will be organized. The colloquium includes the curriculum of the first semester. The colloquium consists of 8 questions with 4 points per question. A student must obtain a minimum of 20 points out of a maximum of 32 in order to obtain a minimum of 20 points in this evaluation element. A student who does not achieve a minimum of 20 points in the colloquium has the right to take another colloquium a maximum of 2 times in the academic year in which he takes the course on Infectious Diseases of Domestic Animals. In each subsequent academic year, he has the right to a maximum of three additional colloquium attempts. A student who achieves a minimum of 20 points on the colloquium has the right to take the final exam.

5. Final exam

Minimal conditions for the first, second, third and fourth evaluation elements must be met before taking the final exam. The minimal number of points before the final exam cannot be less than 36 and the maximal is 60. The final exam is oral and starts with a short recapitulation of obtained results in four other elements of student evaluation. and consists of 10 questions. Each answer to a given question is graded from 0 to 4 points so that the maximum possible number of achieved points is 40. Regardless of the number of points achieved from the previous 4 assessment elements, the student must demonstrate sufficient knowledge in the final exam in order to collect a minimum of 24 points. If the student did not pass the final exam, he has the right to retake the oral exam in accordance with the approved exam terms.

required to pass. Taking the progress test during the main term is compulsory (missing the main term needs to be justified).

3 additional progress test terms will be announced, as per agreement with students.

A passing grade for the progress test is a requirement in order to register for the final exam. However, the progress test is not a requirement for a signature in the grade book. If the student fails the progress test 4 times, he/she needs to take the whole course over again. In case he/she doesn't take the progress test or fails it 4 times, an additional term is possible if the student representative writes an official request to the respective Vice Dean. The Course leader makes the final decision.

In order to take the final exam, a student must gain a minimum of 16 points by attending lectures and practicals and through activities during practicals, and at least 20 points from continuous knowledge assessments.

The final exam consists of 10 oral questions and in total brings up to 40 points (a minimum of 24 points to pass). The total sum of points achieved from the above-mentioned elements is expressed in the final mark (1 - 5), 1 being a fail.

Points	Grade
up to 59	1 (F)

	1. Lecture	attenda	nce			

Student must attend 15 hours of maximum 30 hours of lectures to gain minimal 3 points. The maximal number of points for lecture attendance is 6. Students can be absent in 50% of lectures.

2. Seminar attendance

During semester a students will have 10 hours of seminars. Student is obligated to attend 8 hours out of 10 hours of seminar. Student can be absent on 20% of hours of seminars. The minimal number od points for seminars is 4.8 and maximal is 6. Seminars are divided in 3 programes:

- a) Equine orthopedic- 4 hours
- b) Equine orthopedic- 3 hours
- c) Lameness in cattle- 3 hours

3. Exercise attendance

2.10. Grading and evaluating student work in class and at the final exam

During the semester a student must attend 28 practicals hours (out of total 35 hours) in order to gain minimally 4,8 points during the semester. Students can be absent on 20% of hours of practicals. The maximal number of gained points from this evaluation element is 6.

Practicals are divided in 5 programes:

- 1. Equine orthopedics- 6 hours
- 2. Equine orthopedics- 5 hours
- 3. Small animal orthopaedic examination/OR- 9 hours
- 4. Decision making in fracture management and neurologic examination/OR- 9 hours
- 5. Lameness in cattle- 6 hours

4. Active participation at the practicals

Participating actively at the practicals students can gain 35 points max., what brings them 10 final points. Points for performing the following tasks:

25 points = keeping records in the book of a patient in an orderly manner and active participation in the work with patients in five (5) programs

10 points = seminars (student is obligated to present at least two (2) seminar essay topics to complete course)

The number of points students must gain in order to earn minimal 5 final points is 17.5. Student's participation at the exercises will be checked continuously.

5. Mid term exams

During the semester there will be three (3) mid term exams organised at the time of exercises, each containing eleven (11) problems or questions. Each correctly solved problem or correctly answered question is worth one (1) point. A student must gain at total of 21 points from 3 mid term exams (minimal 7 from each mid term exam) in order to earn minimal 20 final points (21 point multiply with 0.9696). The maximal number of points a student can gain from this evaluation element is 32 final points (33 point multiply with 0.9696). A student who does not gain minimally 21 points (7 from each exam) has a right to take up to 2 makeup mid term exams (only those which failed-less than 7 points). A student who passes the makeup mid term exam with minimally 7 correct answers has a right to take the final exam.

The mid term exam are:

- a) Diagnosis of equine lameness
- b) Orthopedic examination of small animals
- c) Neurological examination

6. Final exam

Minimal conditions for passing the first, second, third, forth and fifth (lecture attendance, seminars attendance, practicals attendance, practicals and seminars activity, mid term exams) evaluation element are summed up and they are worth 37.6 points all together. Maximum points to gain from all 5 elements is 60.

Questions in the final exam will be put in a way that a student can answer in written and oral form. In the written form there will be 20 questions divided in 5 groups (20 points), 12 of which must be answered correctly in order to take the oral exam. The maximum number of points that can be gained at the oral exam is 20 points (five questions), where maximally 4 points can be gained for 1 correct answer (0-4). The minimal number of points a student must gain at the final exam is 24 (12 points minimally at written and 12 as well at oral exam). The maximal number of points on written exam together with oral exam can be 40 points. If student does not gain minimum 12 points on written exam one can not take oral exam. If student does not gain minimum 12 points in oral exam, one fails.

2.11. Required literature (available	Title	r of copies in the library	lity via other media

(2014): ICAR – claw health atlas. Kent Ames, N. (2013): Noordsy's Food Animal Surgery, 5th ed. Brinker, Piermattei, and Flo's Handbook of Small Animal Orthopedics and Fracture Repair (all editions). Johnston, S.A., K.M. Tobias (2018): Veterinary Surgery: Small Animal (2nd edition).
2.13.Quality assurance methods that ensure the acquisition of exit competences	During the semester there will be three (3) mid term exams organised at the time of exercises each containing eleven (11) problems or questions. Each correctly solved problem or correctly answered question is worth one (1) point. A student must gain the total of 21 points from mid term exams (minimal 7 from each mid term exam) in order to earn minimal 20 points. (21 times 0.9696). The maximal number of points a student can gain from this evaluation element is 32 points. A student who does not gain minimal 21 points during the semester from mid term exam has a right to take a makeup mid term exam. The two makeup mid term exams will be organised upon completion of the teaching in the semester. To pass makeup mid term exam student has same criteria as for primary mid term exams.

2.1.Course objectives	activities through legal animal health protection improvement of animal procedure for testing an and inspection supervintroduced the resport persons in relation to the life, health and welfar requirements (the keep them in experiments, and this course students).	s to get students acquainted with I acts of the Republic of Croation, implementation of veterinary I reproduction, veterinary protected placing on the market of veterinists in the veterinary field. Ansibilities, obligations and dutice, the manner of handling anioning and raising of animals, when the time of slaughter or humane will be able to correctly interposub-law regulations in the area of	a related to the area of public health measures, ction of the environment, rinary medicinal products also, to students will be ses of natural and legaling the protection of their imals, animal protection transporting them, using killing). After completing reted, used, and finally	
2.2.Course enrolment requirements and entry competences required for the course		Infectious Diseases in 11th sem		
2.3.Learning outcomes at the level of the programme to which the course contributes	o ability to interpret, use, and implement of formal and material legislation of General Administrative Procedure Act, Veterinary Act, Livestock Act, Act on Veterinary Medicinal Products, Food Act, Animal protection Act and subordinate regulations / legislation based on above mentioned			
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 interpret, apply and implement the formal legislation of the area of the General Administrative procedure the Veterinary Act, the Veterinary Medicinal Products Act, the Food Act, the Animal Protection Act and subordinate legislation based on the above and equivalent regulations of secondary legislation of the European Union; know the procedure and manner of issuing the record and decisions in the administrative procedure related to veterinary activities; knowledge of the following procedures in veterinary medicine: veterinary checks and controls on farms, farms, livestock fairs and other facilities issuing animal health certificates, certificates for consignments of products of animal origin and feed; conducting compulsory marking of animals and keeping prescribed 			

- movement, on the implementation of stipulated measures for the detection, prevention, control and control of infectious or parasitic diseases.
- take diagnostic material from animals, samples of products of animal origin and animal waste matter for the purpose of examining the health status of animals, i.e. the sanitary safety of products of animal origin
- recognize the suspicion of an infectious or parasitic disease of interest to the Republic of Croatia and the EU;

knowledge of the responsibility and obligations of natural and legal persons with regard to animal protection and protection of their health

Lectures (15)

- Introduction to the state veterinary medicine. Main fields of veterinary activities: animal health protection measures, implementation of veterinary public health measures, improvement of animal reproduction, veterinary protection of the environment, control of zoonosis and prevention of the occurrence of listed diseases. Terminology used in veterinary medicine i.e. veterinary activities.
- The legal order European Union (EU), EU treaties, Fundamental values
 of the European Union, The institutions of the EU; The legal order of the
 European Union, The legal sources of Union law (Regulations, Directives,
 Decisions), The legislative process in the EU; The World Organisation for
 Animal Health (OIE)
- Current Union legislation on Animal Health; Listed diseases; Animal keepers and Operators, Veterinarians, Competent Authority; Official laboratories; Disease notification and Reporting system; Surveillance
- Eradication programmes Category B and C diseases; Suspicion of certain diseases; Official confirmation of certain diseases; General criteria for the granting of disease-free status
- Disease control measures for category A diseases; Contingency plans and simulation exercises; Use of veterinary medicinal products for disease prevention and control; Disease control measures in the event of suspicion; Disease control measures in the event of official confirmation of an outbreak
- Administrative Procedure; Administrative and inspectional supervision; Veterinary inspector and border veterinary inspector; Authorised veterinarian
- Animal protection; Fundamental provisions on animal protection; Prohibited conduct for the purpose of animal protection; Performing procedures on animals; Protection of animals at the time of killing
- Veterinary activities implementation system; Establishment and removal from the register; Veterinary surgery and veterinary station; Authorised veterinary organisations; Control bodies; Veterinary practice; Veterinary hospital and veterinary clinic; Veterinary pharmacy; Croatian Veterinary Institute; Reporting on veterinary activities; Veterinary staff; Croatian veterinary chamber; Expenditure in the veterinary field

Seminars (30)

- Identification and non-comercial movment of dogs, cats and ferrets
- Identification and registration of bovine animals; Identification and registration of pigs (eartags, animal passports, holding registers) – student presentations
- Identification and registration of ovine and caprine animals; Identification and registration of of equidae (eartags, animal passports, holding registers) student presentations
- Registration of establishments and certain types of operators; Recordkeeping obligations; Traceability requirements; Movement of consignments within the Republic of Croatia; Certificate of health condition and place of origin of the animal; Veterinary check of holdings, Veterinary checks of

1.5.Status of the course	compulsory	1.10.Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	10%		
2. COUSE DESCRIPT	ION				
2.1.Course objectives	Students will be able to identify methods used in epidemiologic studies and how to apply them in different cases and situations. They will be able to describe the disease in population in relation to measurements of disease occurrence and how to find and explain errors as components of measurements as well as how to use appropriate sampling methods. Students' will be able to evaluate the diagnostic tests and to interpret them in relation to disease occurrence and planning of control strategies. Students will gain knowledge how to use the observational studies and to calculate and determine risk factors in population.

2. COUSE DESCRIPTION				
After completing this course students will be capable of conducting clinical				

After completing this course students will be capable of conducting clinical procedures and interpretating clinical and laboratory data, which enables them to diagnose most common diseases from the area of internal medicine of dogs and cats, and to recognize disease states that demand further specialistic treatment. Knowledge and skills gained at this course will make students capable to work in institutions that are dedicated to maintaining health of dogs and cats. Acquired knowledge at this course is basis for further specialistic education which is a part of continuing education.

OBSTETRICS

After completing this course, the students will be capable to diagnose and treat gynecological diseases of dogs and cats. Furthermore, they will be capable to perform common gynecological surgical procedures. Knowledge and skills gained at this course will make students capable to work in institutions that are dedicated to maintaining health of dogs and cats. Acquired knowledge is sufficient to enable further education through specialistic or doctor education.

2.1 Course objectives

PARASITIC DISEASES

After completing this course, students will be well acquainted with diagnostics and determination of endo- and ectoparasites, as well as the algorithm of diagnostic procedures. The students will be capable of performing parasitological examination and determine the most common parasites of dogs and cats which can produce clinical illness in dogs and cats, but in humans as well. They will be able to construct prevention schemes and procedures. When the diagnostic of parasitic diseases demands expert laboratory or procedures, the students will be capable to adequately sample necessary material and prepare required documentation for these tests.

CLINICAL TOXICOLOGY

After completing this course, the student will be able to recognize poisoning, to apply nonspecific as well as specific treatment of the poisoned patient, adequately sample material for further toxicologic diagnostics, and correctly asses the success of treatment.

2.2 Course enrolment requirements and entry competences required for the course	Listening requirement: Passed the course Diseases and Treatment of dogs and cats I. Passed exam: Obstetrics and Reproduction II. Requirement for taking the exam: Passed exam: Diseases and Treatment of dogs and cats Passed colloquium: Diseases and Treatment of dogs and cats II
2.3 Learning outcomes at the level of the program to which the course contributes	Improved level of knowledge of less known diseases and improved diagnostic and therapeutic procedures as well as differential diagnostics in the area of small animal internal diseases, parasitology, obstetrics and toxicology.
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Students will be able to differentiate between larger number of internal diseases and acquire larger therapeutic capabilities from the area of internal medicine Students shall improve differential diagnostics of less common gynecological disease as well as neonatology and be able to perform routine surgical interventions in area of gynecology of dogs and cats Students will be able to recognize and treat toxicological diseases of dogs and cats Students will be able to recognize and treat parasitic diseases of dogs and cats
2.5 Course content	Internal diseases: 26 hours: gastroenterology 3 hours, respiratory diseases 2 hours, oncology 3 hours, nephrology 3 hours, neurology 3 hours, emergency and critical care 3 hours, cardiology 3 hours, dermatology 3 hours, endocrinology 3 hours. Obstetrics: 6 hours: examination and gynecologic propaedeutics and neonatology 2 hours and gynecologic operations 4 hours. Toxicology: 5 hours: interactive work-up of clinical cases of poisoning. Parasitology: 8 hours: interactive work-up of parasitological clinical cases with differential diagnostics of parasitic diseases and therapy.
broken down in detail by weekly class schedule (syllabus)	1. Propedeutics of dogs and cats: sampling, diagnostic procedures, therapeutic procedures; 2. Clinical laboratory diagnostics: interpretation of haematological blood results, interpretation of biochemical blood results, cavity effusions; 3. Emergency veterinary medicine and intensive care: triage and ABC resuscitation, shock, access to a dyspneic patient, acute abdomen, monitoring of critical and intensive patients; 4. Cardiology: principles of diagnosis of heart disease, diseases of the heart valves, cardiomyopathy, arrhythmia; 5. Respiratory diseases: respiratory obstruction syndrome in brachycephalic breeds, tracheal collapse, chronic bronchitis in dogs, chronic bronchitis/asthma in cats, laryngeal paralysis; 6. Gastroenterology: principles of diagnosis of diseases of the digestive system, principles of therapy of diseases of the digestive system,

acute pancreatitis, inflammatory intestinal disease, colitis; 7. Dermatology: principles of diagnosis of dermatological diseases, inflammation of the skin, allergic dermatitis, autoimmune skin diseases; 8. Urinary tract diseases: diagnosis of urinary tract diseases, acute renal failure, chronic renal failure, obstruction of the urethra; 9. Neurology: principles of diagnosis of neurological diseases, epilepsy, vestibular syndrome; 10. Endocrinology: hyperadrenocorticism, hypoadrenocorticism, hypothyroidism, diabetes mellitus; 11. Oncology: Principles of diagnosis of neoplastic diseases, principles of cytostatic therapy and cytostatic protocols for the most common neoplastic diseases, paraneoplastic syndrome, lymphoma.

OBSTETRICS

1. Reproduction propedeutics and neonatology; 2. Obstetric surgery (ovaryectomy, ovaryhysterectomy, cesarean section)

PARASITOLOGY

1. Most common parasites of the gastrointestinal tract of dogs and cats – taking samples, of fecal examination, parasite determination and treatment (isosporosis, giardiosis, toxocarosis, ancylostomosis, trichurosis, dipilidiosis, teniosis); 2. Preparing and sending the samples to laboratory for analysis; 3. Dehelmintization program in cubs; 4. Dehelmintization of adult animals; 5. Blood and tissue parasites – dirofilariosis, babesiosis (taking samples, parasitological diagnostics, treatment, prevention, vector control); 6. Leishmaniosis (clinical treatment, taking and sending samples to laboratory for analysis, treatment, prevention, vector control); 7. Ectoparasites as agents of pruritus and/or dermatitis (lice, fleas, *Notoedres*-mange, *Sarcoptes*-mange, demodicosis, *Otodectes cynotis*, cheyletiellosis); 8. Clinical treatment, parasitological examination of the skin and ear canal, determination of parasites; 9. Treatment and prevention.

CLINICAL TOXICOLOGY

1.Clinical toxicology and your first case; 2. Clinical cases of poisoning of dogs and cats (case reports – PowerPoint presentations in the form of conversatories) with pesticides (organophosphate compounds, carbamates, anticoagulants, dipyridyls, pyrethrins and pyrethroids, metaldehyde); 3. Clinical cases of poisoning of dogs and cats with heavy metals (lead, zinc); 4. Clinical cases of poisoning

	of dogs and cats with ethylene glycol (antifreeze), sodium chloride; 5. Clinical case reports (PowerPoint conversatory presentations): poisonous snakes and stings from Hymenoptera.

2. COUSE DESCRIPTION				
2.1 Course objectives	After attending this course, the candidate acquires skills and knowledge that enables him/her to employ clinical methods and interpret clinical and laboratory findings necessary for getting an accurate diagnosis of most frequently occurring internal diseases in farm animals. Likewise, the candidate should also be able to recognize conditions that require further specialist attention. Knowledge and skills acquired by attending this course make the candidate qualified for work in institutions dealing with health preservation in farm animals. Acquired knowledge is also considered a good foundation for taking further continuing education in specialist disciplines. SURGERY, ORTHOPEDICS AND OPHTHALMOLOGY Surgery, orthopedics and ophthalmology within this educational course comprises diagnostic procedures and treatment methods which are carried out in specific farm conditions, at the same time bringing into account feasibility of those procedures as well as economic considerations. Considering that, farm animals are rarely treated in conditions provided by Clinic for surgery, orthopedics and ophthalmology, one of our primary goals is to familiarize students with methods of diagnostics and treatment that can			
	be employed in field and farm especially those carried out in g working conditions at Surgery	eneral anesthesia,	will be demonstrated in	

Students will be able to approach to farm animals in field conditions by protecting their own health at the same time, and to act in a manner that would provide beneficial effect on health of their patients. Considering numerous risks associated with performing, general anesthesia in field conditions (especially in ruminants), the students will master methods of sedation and all forms of local anesthesia. Basics of diagnostic procedures in ophthalmology and orthopedics that could be employed in field conditions will also be presented to those attending this course, and students will be able to correctly assess the situation and bring the decision about feasible treatment. With previously acquired knowledge in internal diseases of the digestive tract, students will be qualified to correctly decide about selecting the right method and performing surgical treatment in abdominal cavity of farm animals. In addition, students will gain a special set of skills and knowledge needed for managing external and internal injuries, as well as to treat lesions acquired secondary to localized infections. Finally, it is very important for the students to acquire knowledge that makes them qualified to perform various elective surgical procedures that are not directly associated with pathological conditions, and yet are of considerable economic importance and should be specifically performed by doctor of veterinary medicine.

OBSTETRICS

During this course, the students will be familiarized with specific features of mammary gland and lactation in certain domestic animals. They will be also familiarized with basics of farming management in swine reproduction. This includes indicators of breeding efficiency of sows, puberty in gilts and boars, as well as their introduction to reproduction. The students will be qualified to perform artificial insemination in swine without supervision, and will be familiarized with providing care to suckling pigs until they are weaned. Furthermore, the objective of this course is to familiarize students with disorders in swine reproduction and measures that should be employed for their prevention and control. Students of this thematic unit will be taught about basic technics and methods employed during artificial insemination procedure. Practical classes will be held on phantom dummy, where students will be in opportunity to apply their theoretical knowledge. During attending this course, students will be familiarized with basic diagnostic tools for early pregnancy diagnosis and procedures employed for infertility treatment (estrus synchronization, treatment of ovarian cysts and other conditions causing infertility). Students will also be familiarized with physiology and pathology during puerperium in cattle, and will be trained for handling puerperal period without supervision.

INFECTIOUS DISEASES

Students will have the opportunity to expand their regularly acquired knowledge about differential and objective diagnosis of infectious diseases in cattle. They will acquire knowledge that makes them qualified for interpretation of laboratory findings required for objective diagnosis of infectious diseases in cattle by methods officially dictated by legislations of Republic of Croatia. Students will also be informed about possibilities of conducting general prophylaxis and immunoprophylaxis in cattle held in intensive farming conditions. Students will have the opportunity to expand their regularly acquired knowledge about differential and objective diagnosis of infectious diseases in sheep and goats. They will acquire knowledge that makes them qualified for interpretation of laboratory findings required for objective diagnosis of infectious diseases in sheep and goats by methods

officially dictated by legislations of Republic of Croatia. Students will also be informed about possibilities of conducting general prophylaxis and immunoprophylaxis in sheep and goats held in intensive farming conditions. Students will have the opportunity to expand their regularly acquired knowledge about differential and objective diagnosis of infectious diseases in swine. They will acquire knowledge that makes them qualified for interpretation of laboratory findings required for objective diagnosis of infectious diseases in swine by methods officially dictated by legislations of Republic of Croatia. Students will also be informed about possibilities of conducting general prophylaxis and immunoprophylaxis in swine held in intensive farming conditions.

RADIOLOGY AND ULTRASOUND

Students will be trained to correctly perform radiologic examination of foot regions and to interpret findings in most frequently occurring pathological changes.

PARASITOLOGY

Following completion of this course, students should be able to take a sample of feces in a correct manner and to examine the specimen for the presence of parasitic developmental stages. They would be also able to perform skin inspection and to correctly take a sample for examination, as well as to master technics of various forms of antiparasitic therapy.

SELECTED CHAPTERS IN PATHOLOGY

By practical approach, students will be more closely familiarized with issues in performing necropsy in farm animals. In this way the students will be familiarized with pathomorphological changes that are associated with significant and more frequently occurring diseases in cattle, swine, sheep and goats and will be instructed how to differentiate one disease from another, as well as which tissues should be sampled and then sent for additional diagnostic tests in order to reach the final diagnosis. Special emphasis will be placed on pathomorphological changes and differential diagnosis in ruminants, considering that students during their regular classes in "General pathology and pathological morphology" usually have lesser number of necropsies performed on ruminants then those performed on swine.

POULTRY

Acquiring knowledge about the ways of production in all production categories of poultry, with main objective to preserve health within the population.

FARM ANIMAL WELFARE

Students will acquire knowledge about proper treatment of animals in production, which is considered very important in ensuring animal welfare.

ANIMAL NUTRITION

Students will acquire knowledge of preventing nutritional errors, which are often cause of metabolic diseases, and learn about characteristics of nutritional therapy in farm animals.

PHARMACOLOGY

	At the very end of their formal higher education, students will have mastered the treatment of certain diseases of farm animals, especially because they will be able to see things in whole after everything they had been taught during the study. Special emphasis will be placed on how to properly dose drugs in group therapy by applying them in food and water for treatment and prevention of frequently occurring diseases in certain species of farm animals.
	TOXICOLOGY
	By acquired knowledge students will be qualified to recognize poisoning, to treat affected animal, be able to assess results of the treatment, and to properly sample material required for diagnostic tests, primarily for toxicological analysis. Moreover, students will be able to estimate possible losses caused by animal poisoning and to evaluate the results of chemical and toxicological analyses in case of presence of toxic residues ("Book of regulations").
2.2.Course enrolment requirements and entry competences required for the course	Students should be able to take the animal's history, restrain it in a safe way and perform a general clinical examination. The student should be able to propose diagnostic examinations and understand the principles of the therapeutic approach which could be performed on the farm animals patients.
2.3 Learning outcomes at the level of the programme to which the course contributes	Mastering the concepts in diagnosis and treatment of diseases of farm animals.
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Independently perform all diagnostic and therapeutic procedures that include diseases of farm animals. Taking material for all types of laboratory tests. Perform all maternity procedures that can be performed well in the conditions of fieldwork (e.g. Mastitis Test, review the sterility, assisting in parturition, cesarean section). Perform all surgical procedures adapted to conditions of fieldwork (e.g. diagnosis of lameness, castration of male patients, puncture of fluctuating swellings, enterotomy, gastrostomy, laparoruminotomy, abomase displacement surgery, hoof correction). Mastering pharmacodynamics clinical aspects, diagnosis and treatment of parasitic diseases of farm animals, diagnosis and treatment of poultry kept in farm conditions, zoohygiene farm animals, important aspects of the dissection of farm animals, farm animal toxicology.
2.5 Course content broken down in detail by weekly class schedule (syllabus)	Organic diseases. 1. Digestive tract diseases (acid indigestion, alkaline indigestion, abomasum dislocation, acute ruminal tympany, traumatic indigestion, oesophago-gastric ulceration in swine, abomasum ulceration, altered positions of the intestines; bowel obstruction, peritonitis); 2. Diseases of the respiratory tract (hyperemia and pulmonary edema, pneumonia); 3. Cardiovascular diseases (endocarditis, pericarditis); 4. Diseases of the hematopoietic system (anemia, leukemia, leukopenia); 5. Urinary tract diseases (cystitis, renal failure/insufficiency, pyelonephritis); 6. Nervous system disorders (differential diagnostics); 7. Diseases of the integumentary system (skin diseases in ruminants and swine) Metabolic diseases. 8. Metabolic profile blood work 9. Ketosis and lipoidosis, 10. Diseases associated with vitamin and trace mineral deficiency; 11. Osteodystrophy and tetany; 12. Medical management at the farm (measures for disease prevention, monitoring to establish prevalence of various

problems and disorders on the farm, making vaccination and disease treatment protocol)

SURGERY, ORTHOPEDICS AND OPHTHALMOLOGY

1. Approaching to farm animals, methods for distraction and restraint; 2. Applying sedation and local regional, infiltration and superficial anesthesia in farm animals within medical facility, and especially in field conditions. 3. Ophthalmological examination in farm animals; 4. Preforming certain procedures in abdominal surgery on farm animals (herniotomy, laparoruminotomy following Weingarth, laparoruminotomy following Goetz, surgical treatment of abomasum dislocation, castration by employing bloodless and surgical method); 5. Management of external and internal injuries and consequences of localized infections on available animals; 6. Lameness diagnostics in farm animals; 7. Functional hoof correction in small and large ruminants; 8. Diseases of cattle horns and decornuation; 9. Procedures of economic value performed in swine (tail docking and teeth clipping in piglets).

OBSTETRICS

1. Diseases of the mammary gland (specific features of mammary gland and lactation in specific farm animals, with special emphasis on small ruminants in farm breeding); 2. Management of swine reproduction; 3. Artificial insemination (techniques of artificial insemination and measures for its successful employment in field conditions); 4. Fertility management in dairy cows (measures for improvement of fertility in farm conditions, early diagnosis of pregnancy by rectal palpation and ultrasound examination, infertility treatment, estrus synchronization, treatment of ovarian cysts and endometritis along with other conditions causing infertility). 5. Puerperal period and introduction of young females to reproduction

INFECTIOUS DISEASES

1. Infectious diseases of cattle in intensive farming (diagnostics and differential diagnostics of cattle infectious diseases in intensive production, measures performed for general and specific immunoprophylaxis, for infectious diseases, for cattle in intensive production). 2. Infectious diseases of goats and sheep in intensive farming, measures performed for general and specific immunoprophylaxis for infectious diseases in goats and sheep in intensive production). 3. Infectious diseases of swine in intensive farming, measures performed for general and specific immunoprophylaxis for infectious diseases in swine in intensive production)

RADIOLOGY

1. Mobile radiographic devices. 2. Radiographic techniques for filming distal portions of the body. 3. Radiologic analysis and interpretation of findings associated with hoof pathological entities on thoracic and pelvic limbs

PARASITLOLOGY

1. Gastrointestinal nematodes in cattle, sheep and goats; 2. Scabies in domestic ruminants; 3. Lung nematodes in domestic ruminants, 4. Diseases caused by protozoa in domestic ruminants; 5. Tapeworm and liver fluke infestations in domestic ruminants; 6. Other diseases caused by ectoparasites in domestic ruminants; 7. Parasitic diseases of swine

SELECTED CHAPTERS IN PATHOLOGY

	1. Special aspects of employing necropsy as a diagnostic method in far animals; 2. Familiarizing with pathomorphological features associated wi more important and frequently occurring cattle diseases; 3. Familiarizing with pathomorphological features associated with more important ar frequently occurring swine diseases; 4. Familiarizing with pathomorphological features associated with more important and frequent occurring diseases in sheep and goats.					
	POULTRY					
	1. Poultry and wildfowl production system (breeding of the parent floreproduction, hatcheries, chick rearing for different purposes); 2. Pour integration system (health protection, prevention of diseases of varietiology, breeding technology for gaining genetic features, which we protect the animal from incubation through period of production); 3. Meth for artificial insemination in poultry.					2. Poultry of various ich would

	CLINICAL TO	XICOLOGY				
	1. Clinical toxicology and your first case; 2. Clinical cases of farm animpesticide poisoning (Power Point presentations of case reports: poisoning with organophosphates, carbamates, piretrins and piretroides); 3. Clinical cases of heavy metal poisoning in farm animals (lead, arsen, iron as copper poisoning); 4. Clinical cases of ethylene glycol (antifreeze) as sodium chloride poisoning in farm animals; 5. Clinical cases of urea, nitral and nitrite poisoning in farm animals; 6. Clinical cases of plant poisoning (oleander, hemlock and yew) and mycotoxin poisoning (estrogent slaframine, fumonisins, trichothecenes); 7. Clinical cases of tick paralysis (Power Point presentation of case reports).				poisoning 3. Clinical , iron and eeze) and ea, nitrate poisoning estrogens,

FORENSIC VETERINARY MEDICINE

1. GENERAL INFORM	IATION			
1.1 Course teacher	Prof Krešimir Severin	1.6 Year of the study	6	
1.2 Name of the course	Forensic veterinary medicine	1.7 Credits (ECTS)		
1.3 Associate teachers	Assist Magdalena Palić, DVM	1.8 Type of instruction (number of hours L + S + E + e- learning)	10+0+35+0	
1.4 Study programme (undergraduate, graduate, integrated)	Integrated	1.9 Expected enrolment in the course	10-30	
1.5 Status of the course	Compulsory	1.10 Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	1, 10%	
2. COUSE DESCRIPT				
2.1 Course objectives	the student in this spectoresents students that all medicine, not only expert the course is to train studicases related to animals a procedures at a crime sorthe preconditions for ensacquires the knowledge I and how to present their expinions through the vetocourt or other body which trained to determine particular occurred during animal nebe given the knowledge at	ine course is conceived in a cial field of veterinary med II veterinarians deal with the sin this veterinarian disciplents for legal medical judge and animal products, indicate (Site visits and fieldworks are considered to the control of the cont	dicine. Teaching his part of legal line. The goal of ing of disputable ate the important rk) and what are vidence. Student erinary expertise ding findings and eatements to the o students will be juries that have ally, students will rinary staff during	
2.2 Course enrolment requirements and entry competences required for the course 2.3 Learning outcomes at the level of the programme to which the	Attended the course of State Veterinary Medicine o apply the acquired knowledge of veterinary medicine clinics, veterinary public health, animal production and biotechnology with newly acquired ones in the field of forensic veterinary medicine to use in veterinary medicine o positive effects on expertise and competence of future veterinary			
course contributes 2.4 Learning outcomes expected at the level of the course (4 to 10	legal and natural perso o knowledge of formal an and Criminal Act	nd material legislation of Civi essional witness and expert	l, Misdemeanour	

learning outcomes)

- o ability to investigate, collect evidence from or prepare reports about matters concerning crime scene investigation
- o ability to carry out forensic necropsy as full as possible, in order to ascertain the cause of death, the mechanism of death and the manner of death
- o ability to carry out forensic clinical examination of an animal prior to purchase or that might be the subject of a legal case
- o ability to estimate the value of animals relevant to legal and insurance cases
- knowledge of medical-legal and forensic aspects of most important animal diseases and disorders

I. Legislation - legal aspect: Introduction to forensic veterinary medicine. Definition and historical overview. Forensic veterinary medicine (Latin medicina forensis veterinaria) as an independent veterinary discipline. Forensic veterinary medicine and civil law (Civil Obligations Act, Civil Procedure Act). Defining things, warranty, damages, professional misconduct. Claims, litigation, hearings, submissions, litigation costs, deadlines, court records. Civil Procedure Act. Types of courts. Territorial and subject matter jurisdiction. Duties and liabilities of the witness of fact and expert witness. Inquests. Forensic veterinary medicine and the criminal law (Criminal Code). Criminal offence, intent and negligence. Fraud (fraudulent acts executed by simulation and dissimulation). Criminal offenses related to veterinarian activities, criminal offenses against human health (spreading and transmission of infectious diseases, careless inspection of meat intended for human nutrition). criminal offenses against the environment (pollution, endangering the environment by waste disposal, endangering the environment with installations, destruction of protected areas of natural resources, habitat destruction, killing or torturing animals, transmission of infectious animal diseases. production and sale of harmful agents for the treatment of animals, veterinary malpractice). Forensic veterinary medicine and the administrative law. Animal insurance.

2.5 Course content broken down in detail by weekly class schedule (syllabus) II. Forensic veterinary pathology: Forensic postmortem examination and report writing. Agony and death. Forensic aspects of postmortem changes and postmortem interval (basics of forensic entomology, botany, palynology and diatomology). Difference between antemortem and postmortem changes. Forensic aspects of injuries (mechanical damage - local and general effect (blunt force injuries - abrasions, contusions and lacerations; sharp force injuries - incised wounds (cuts, or slashes), stab wounds (puncture or penetrating wounds), bite injuries, firearms injuries, bone fissure and fractures, dislocation of joints; bleeding, bruises, hematomas, thrombosis and infarction) shock, blast, Crush syndrome. Asphyxia injuries - strangulation, choking and smothering, suffocation and crus asphyxia, poisonous gases, drowning. Physical injuries - thermal injuries, injuries caused by electricity. Nutritional injuries.). Forensic aspects of inflammation (acute - serous, catarrhal, purulent and fibrinous, and chronic granulomatous inflammation). Forensic aspects of adaptive cellular responses (atrophy, hypertrophy, hyperplasia, metaplasia and dysplasia). Bone and wound healing. Cell death determination. Collecting, handling, including security and safety of samples (evidence) for different diagnostic procedures.

III. Forensic veterinary expertise – Expertise: Expert witness report. Court file, findings from court file, consideration, conclusions, opinions and forms of opinions. Independent and combined expertise. Witness of the fact, professional witness, expert witness. Conditions for providing expert witnesses duty. Duties and liabilities of the expert. Code of Ethics. Providing testimony of expert at the trial. Determination and judgment diseases and disorders in forensic veterinary medicine.

Veterinary certificate (exercise in compiling and analyzing specific court cases). General principles of judgments of organic, infectious and parasitic diseases. Practical training on court and other cases. Most important animal diseases and their forensic significance: Internal diseases - diseases of the respiratory and circulatory system (Chronic Obstructive Pulmonary Disease (COPD)/Heaves, Pneumonia, Pulmonary edema, Aortic rupture, Traumatic pericarditis, etc.) of the digestive system (Equine colic, Gastric dilatation and volvulus, Bloat, Acute and chronic hepatitis and Hepatic cirrhosis, etc. .), metabolism disorders (Ketosis, Azoturia syndrome, Nutritional myopathy of equides, etc.), urinary tract (Acute and Chronic renal failure, Pyelonephritis of cattle, etc.), nervous system (Hydrocephalus internus chronicus acquisitus et oedema cerebri, Epilepsy, etc.).

Surgery (surgical procedures – Male castration, Gastric dilatation volvulus, Equine colic, Bone fractures, etc.), orthopedics (diagnostic of lameness – Laminitis, Navicular disease, etc.) and ophthalmology (Moone blindness, Cataracta, ect.).

Reproduction and obstetrics – diseases related to Pregnancy (Embryo and Fetal mortality), Parturition (Difficult parturition), Puerperium (Foetal retention, Endometritis, Prolapse of uterus, ect.), diseases of the mammary glands (Mastitis, etc.). Infectious diseases - infectious diseases of domestic animals (Malignant edema, Pasteurellosis, Leptospirosis, Brucellosis, Aujeszky's disease, Tuberculosis, Tetanus, etc.), horses (Equine infectious anemia, Equine viral rhinopneumonia, Strangles, etc.), cattle (Malignant catarrhal fever, Paratuberculosis, Enzootic bronchopneumonia of cattle, etc.), pigs (Progressive atrophic rhinitis, Enzootic pneumonia, Classical swine fever, etc.), sheep (Infectious foot rot in sheep), dogs (Distemper), rabbit (Myxomatosis). (Acariasis), Parasitic diseases skin respiratory system (Metastrongylosis, Protostrongylosis), gastrointestinal (stomach and intestine - Ostertagiosis, Trichostrongilidoza, Ascarosis, Strongyloidosis, Coccidiosis. Parscarosis. Echinococcosis. Cysticercosis, Trichinellosis; liver - Dicrocoeliosis, Fasciolosis) circulatory system (Babesiosis, tajlerioza), other tissues (Leishmaniasis) and bee disease (Nosema, Acariosis, Varroasis).

IV. Site visits and fieldwork / Crime scene investigation: Organization and management of the site. Liabilities in professional conduct of official persons (responsibility of police officers, court official persons, veterinary inspectors and veterinary staff) when collecting material evidence of biological origin under the provisions and principles of formal and substantive legal acts. Specific investigation at the scene. Recognizing, collecting, labeling and security / protection of biological traces and items that may serve as evidence (Chain of Custody - Chain of Evidence). Equipment and environmental conditions. Procedure of establishing and working laboratories for identification of biological traces (level of reliability regard to credibility of the material evidence). Collecting and securing procedures for material traces of biological origin (animal-various tissues, blood, urine, animal products). Investigation activities on the scene (clinical examination live animals, necropsy, analysis of blood traces, entomological analysis).

V. Identification of vertebrates: The scope of application of the identification of vertebrates in forensic veterinary medicine. Classification of biological traces in respect to origin and requirements of veterinary medicine. Animal as a victim, witness and perpetrator. Specificity of identification requirements in case of protection and conservation of endangered species (CITES), issuance of certificate of pure breeding and Pedigree of breeding animals, analysis in inspection control of animal products or animal feed origin. Identification check (in internal trade or across the borders of the Republic of Croatia). Species

	(parental), Selection of sensitivity in p VI. Conditio (overfeeding, dehydration, inadequate a torturing). Cl psychologica Animal hoard Munchausen slaughter. It transportation VII. FIELD SERVICE CLINIC

1. GENERAL INFORI	MATION				
	Full prof. Nikica	1.6 Year of the study	6 th		
1.1 Course teacher	Prvanović Babić, PhD,	programme			
1.2 Name of the	DVM Field Service Clinic		6,0		
course	Tield Service Clinic	1.7 Credits (ECTS)	0,0		
1.3 Associate teachers	Multidisciplinary and case oriented nature of this subject would include variable team of clinical veterinary surgeons, depending of case load. Clinical surgeons would involve all teaching staff from Clinic for obstetrics and reproduction, Clinic for internal deseases, Clinic for surgery, orthopaedics and ophthalmology and Department for microbiology and infectious deseases with clinics. In absence of full prof. Prvanović Babić, PhD, DVM course leader as her replacement would be asst. prof. Darko Grden, PhD, DVM.	1.8 Type of instruction (number of hours L + S + E + e-learning)	0+0+60+0		
1.4 Study programme (undergraduate, graduate, integrated)	integrated	1.9 Expected enrolment in the course			
1.5 Status of the course	obligatory	1.10 Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRIPTION					
2.1 Course objectives	In addition to the general objectives and tasks of educating future veterinary surgeons, a special objective within this course to enable students to do professional work in the diagnosis, curing and prevention of animal diseases in the field.				
2.2Course enrolment requirements and entry competences	Attended all cases I - X.	semester			

required for the				
course				
2.3Learning outcomes at the level of the programme to which the course contributes	Acquiring the skills needed to perform the independent veterinary practices in the field condition.			
2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Independently perform all diagnostic procedures including methods of clinical examination in conditions of field work. Taking samples from the live patients or cadavers which would enable material for all types of laboratory tests. Perform all obstetrical procedures that can be performed well in the conditions of fieldwork and routine gynecological and andrological exams for all aspects of clinical reproductive practice. Perform all surgical procedures adapted to conditions of fieldwork and thorough clinical examination of all kinds of internal deseases on farm.			
2.5 Course content broken down in detail by weekly class schedule (syllabus)	Teachers and assistants from Item:	content	wethodological units Veterinary practices and farms in areas:

2. COUSE DESCRIPTION					
2.1 Course objectives	Getting students acquainted with basic principles of Herd Health and Production Management. Special attention is to be focused on practical appliance of acquired knowledge and experience. Attendants who finish the course should be able to detect and recognise most problems on farm, and fix some of them using acquired knowledge. For the rest they should ask for help (usually from more experienced veterinarians). General competence: training attendants for team work, improving their communicative skills. Specific competence: introducing to basic Herd Health principles, introducing to basic epidemiologic principles based on practical data collecting and researching without processing and analysing them, detecting of basic cause and effect relations of the most important farm diseases, noticing of specific advantages and disadvantages of environmental and housing factors to herd health, mastering of basic nutrition principles, comprehending of basic reproduction principles pointing out veterinary and technical procedures, equipment and animal manipulation, mastering of regular milking procedures, development and improvement of new milking protocols, detecting of metabolic disorders and veterinary procedures for those, detecting of lameness and veterinary procedures, skills and procedures at appearance of infectious diseases on farms, getting acquainted with specific features of

class schedule (syllabus)

"free range" production principals, comparison between poultry and other animal productions), Preventive principles in wider terms Choice of genetic basis as precondition for a successful production, genetic resistance, adaptability to new environmental circumstances, genotypic-ambient interaction, chromosome deviations, lethal defects and genetic factors of mortality, oligenic determined diseases and deformities, domestication, mistakes in nutrition as precondition of disease appearance, production technology, housing as precondition for animal production and welfare), Preventive principles in narrower terms (Immunoprophylaxis, growth of causative agents and ways of spreading, immunity of bird (specific and nonspecific), immunity defects, factors damaging immunity, vaccination, treatment as preventive measure, stress conditions (environment, nutrition, social stress, incubation), adaptability syndrome, metabolic changes of immunity, stress alleviation, diagnostics as prevention, hygienic, sanitary and administrative measures and welfare of poultry), 2 Viral diseases-Paramyxovirosis, 3 Orthomyxovirosis, turkey rhinotracheitis, 4 Infectious bronchitis, infectious laryngoitracheitis, fowlpox, 5 Infectious bursal disease, chicken infectious anaemia, 6 Marek disease and other lymphoprolipherative diseases (leucosis/sarcoma complex reticuloendotheolisis), 7 Adenovirus infections, avian encephalomyelitis, 8 Turkey Coronavirus enteritis, picornavirus infections, reovirus infections, 9 Bacterial zoonoses, 10 Salmonella and other Enterobacteria infections, 11 Pasteurellosis and related diseases (The most important bacterial diseases specific for poultry and feathered game, especially the ones which can endanger the human health at the same time. Systems of bacterial disease transmission and their role in aetiological complex of multi causal diseases, and procedures for prevention of such disease outbreaks. Ways of treatment without use of harmful medicaments), 12 Fungal and protozoan diseases (Aspergillosis, candidiasis, dactyloriosis, favus, coccidiosis), 13 Metabolic diseases, diseases of skeleton and muscles, Asciteshydropericard

Seminars: 1. Immune system of poultry, immunosuppression and Gumboro associated diseases (Inclusion body hepatitis, Gangrenous dermatitis, Haemorrhagic enteritis of turkey, necrotic enteritis, ulcerative enteritis), 2. Pathogenesis of respiratory diseases (structure of the respiratory system, pathogenesis of respiratory diseases, Paramyxovirus infections different from PMV-1) and prevention of lymphoprolipherative diseases, 3. Other viral infections (avian nephritis, astrovirus infections, transmissible viral proventiculitis, rotavirus infections, Arbovirus infections) and viral infections of waterfowl (Duck viral hepatitis, Duck viral enteritis, Haemorrhagic nephritis enteritis of geese, Parvovirus infection of waterfowl, Circovirus infection of waterfowl, hepatitis B), 4. Mycoplasma infections (Mycoplasma gallisepticum , Mycoplasma meleagridis, Mycoplasma iowae, Mycoplasma synoviae) and other bacterial infections of respiratory system (bordetellosis, Infectious Coryza, Gallibacterium anatis), 5. Other bacterial infections (Prevention of salmonella, Listeria Erysipelas, infections. Enterococcus infections, Stphylococcosis, Pseudomonas infections, Avian Intestinal Spirochetosis, Probiotics and prebiotics in diseases prevention in poultry, Microbiome), 6. Mycoses and mycotoxicoses (Dactylariosis, Cryptococcosis, Zygomycosis and toxicoses caused by trichothecenes, ochratoxins, aflatoxins, deoxynivalenol (DON, vomitoxin), fuminosins, fusarochromanone, cyclopiazonic acid, oosporein, citrinin, zearalenon, moniliformin, rubratoxin, ergotism), diseases caused by mistakes in nutrition, metabolic and developmental diseases (Diseases cause by water scarcity, unbalanced electrolytes, diseases caused by

	avitaminosis, sudden death syndrome, cannibalism, feather pecking, "round heart" and aorta rupture at turkey) 7. Parasitic diseases (Cestodes, Trematodes, Nematodes, Trichomoniasis, Histomoniasis (Blackhead), Hexamitiasis, external parasites and pests), 8. Field cases, 9. Field cases, 10. Field cases, Exercises: 1 Introduction to poultry necropsy, 2 Necropsy, 3 Necropsy, 4 Necropsy, 5 Necropsy, 6 Hatchery egg cull analysis, 7 Bacteriology lab, 8 Virology lab, 9 Principles of vaccination and blood sampling, 10 Molecular lab, 11 Biosecurity 12 Field trip – broiler farm, 13 Field trip – egg layer farm, 14 Field trip - hatchery

(40 points ³)	(coefficient 1)	(coefficient 1)
Σ4	60	100

¹ – For activity on seminars and exercises student can get max. 10 points and min. 5 points. Activity on seminars is obligatory and is graded according to successfully prepared and held seminar and for positively oriented answers with min. 3 points and max. 6 points (for positive answers on 5 written questions 0,1 points can be given, and for 5 answers it is total 0,5 points per seminar, with minimum of 3 positive answers during 8 seminars. Students without positive answers give oral answers to two questions). For given seminar presentation minimum 0,5 and maximum 1 point. Student must collect 2,5 points for written questions and 0,5 points for given seminar.

For activity on exercises (successfully performed practical part) student can get max 2 points (on 15 practicals can get 0,133 points), and minimum 1 point (on 10 practicals 0,1 point). Also for positive answers can get max 2 points (on 15 practicals can get 0,133 points per answers), and minimum 1 point (on 10 practicals 0,1 point).

- ² Continuous assessment brings min. 20 and max. 32 points during colloquium, in which for 10 questions student can get min. 20 and max. 32 points (1 positive answer is 3,2 points).
- ³ Oral exam gives 24 to 40 points. Student answers 10 questions, and for 1 question can get 4 points. Student can aply for the final exam with min 36 points.
- ⁴ Final grade is defined quantitatively, with numeric point scale and a grade corresponding to that scale, from 1 to 5. With grade 1 (one) student is graded if she/he didn't pass the course, i.e. he failed on the exam. For each student its attendance and activity is registered in its personal form, together with its success on the colloquium, what teacher uses to form final grade.

Points Grade do 59 1(F) 60-76 2 (D,E) 77-84 3 (C) 85-92 4 (B) 93-100 5 (A)

2. COUSE DESCRIPTIO							
FOOD HYGIENE AND TECHNOLOGY Dates of veterinary public health in the wider sense of the word can be defined as a veterinary practice in the protection of human health (or as in veterinary public health). In the administrative, however, the sense of veterinary public health can be defined as a veterinary practice in the implementation of regulations in the field of veterinary and health surveillance of foods, especially with regard to the protection of human							

health against diseases of animals and their raw materials and products can be transmitted to humans. The main task of Veterinary Public Health is coordinating the participation of veterinary medicine in the practice of public health and preventive medicine. Security strategy in function of processing and transport and quality control of foods is possible on the basis of the HACCP concept (Engl. Hazard Analysis Critical Control Points), ie, risk assessment and critical control points. In the context of ensuring safety and quality of food is particularly important role of good manufacturing practice (GMP concepts) within the SQA-concept, which includes the quality, safety and acceptability of foods on the market. In the management of product safety priority should be given to the active mediation before the inspection. To familiarize students with facilities for processing meat and other foods, as well as storage systems, cooling and freezing for the purpose of education in the field of health and safety factors and improving the quality of food of animal origin. The aim of veterinary-sanitary control is the protection of human health, preventing the spread of infectious and parasitic diseases of animals and the protection of the economic interests of consumers. The goal of the veterinary-sanitary control in the production, processing, storage and transport of foods eliminated from consumers dangers that may arise eating rotten and health harmful, or faulty medical supplies. Foods are an ideal environment for the proliferation of microorganisms and can be carrier of various diseases, particularly zoonoses, but also those that are just transferred store. May include specific causes of bacterial poisoning people and the microorganisms that its biochemical activity can lead to the creation of various toxic substances. It follows that the hygienic quality of the total valuation basis foodstuffs. The aim is to familiarize students with the regulations governing the proper conduct of veterinarysanitary activities in this segment (Veterinary Act, Food Act, Consumer Protection Act and the regulations which are based on these laws).

ANIMAL HUSBANDRY

Getting acquainted with modern methods used in evaluation of sustainability of certain production systems. Gathering knowledge about genetic basis of characteristics that are most important for quality of animal products. Gathering knowledge about the possibilities of changing genetic basis which is responsible for the animal product quality characteristics.

NUTRITION

Explain the influence of chemical composition and amount on characteristics of animal products. Define approved possibilities of manipulation with the quality of animal products by interventions in feeding. Inform students with EU legislative concerning the using of feedstuffs and feed additives. Feed additives in Croatian legislative (NN 26/98). The concept of food chain in modern world. Explain which deleterious substances could enter food chain and adversely effect human health. Inform students with current scientific advances in GMO field.

ANIMAL HYGIENE, ENVIRONMENT AND ETHOLOGY

Adverse impact of certain factors (the way of accommodation, size of space, rough handling during transfer, inadequate way of separating calves from their mother, cutting tails and teeth, inadequate transport, etc.) on the welfare of animals in group systems (occurrence of stress, pain, suffering) and measures and methods for their prevention. Health aspects related to microbiological contamination of water - hydro infection, inorganic and organic compounds, occurring in water disinfection, MDK. Modern processes and alternative methods of disinfection; effective environmentally acceptable disinfectants new

generation, the basic rules of disinfection and factors affecting performance. Treatment and disposal of the waste and animal fecal matter in order to prevent and control diseases, particularly zoonoses. The use of modern insecticides to combat pests that molest and transmitters of a number of infectious and parasitic diseases, particularly zoonoses. Mechanical and physical measures to prevent the entrance of rodents in enclosed rooms. Choice of means to combat rodents. Precautions against possible contact and the harmful effects of toxins in foods of animal origin.

ZOONOSES

Gaining knowledge about the importance of zoonotic foodborne. Repetition of previously acquired knowledge in general epidemiology. Understanding the specifics of the spread of infectious diseases through products and raw materials of animal origin depending on their agent. Gaining knowledge about the basics of diagnosis of infectious diseases, as well as the implementation of measures to prevent the spread and prevention of zoonoses spreading food.

PARASITOLOGY

Parasitology and parasitic diseases enables students for understanding the biology, morphology and determination of endoparasites as a ethiological factor of foodborn zoonoses. The student will be capable: to distinguish and make identification of each group of parasites and each parasite and their developmental stages among the group; understanding the epidemiology of parasitic diseases and pathogenesis caused by parasites and parasitic developmental stages; developing laboratory and diagnostic skills in the preparation and examination of a range of specimens for diagnosis and identification of parasites and their developmental stages; demonstrate knowledge and practical skills in therapy and control of foodborn parasitic diseases.

PHARMACOLOGY and TOXICOLOGY

Residues of veterinary drugs (pharmacologicaly active substances) in food animals, milk, eggs and honey. Determination of withdrawal time folowing the procedure (algorithm): NOEL (no observable effect level), ADI (acceptable daily intake), MRL (maximum residue limits) and dinamic of depletion of residues from target tissue. Categorisation of pharmacologicaly active substances and auxiliary materials in two groups (regarding MRL).

Residua and sublethal effects of xenobiotics and some esential compaunds. Laboratory instrumental analysis in the context of veterinary public health, contaminants and resida of chemicals, monitoring and validation of methods. Legislation.

2.2 Course enrolment requirements and entry competences required for the course

The requirement for routing: Passed courses Hygiene and Food Technology and courses Quality Control and hygienic Quality of Food; Veterinary Legislation in Food Safety

2.3 Learning outcomes at the level of the programme to which the course contributes

Acquired knowledge and skills are deepen until the specialist knowledge in the field of food security and enable students to work independently in the control and monitoring of biological, chemical and physical contaminants in raw materials and products and in the food chain. In addition, students are introduced to the concepts of production control (HACCP) and prerequisite programs. Also students connect knowledge in the field of animal hygiene, animal husbandry and nutrition, and put them in the context of the food chain. Special attention is given to the zoonosis control and monitoring of residues of veterinary drugs in the food of animal origin.

2.4 Learning outcomes expected at the level of

- knowledge-term veterinary public health and the modern conception of veterinary control in the production and trade of food, explain the role of

the course (4 to 10 veterinary medicine in the protection of human health and evaluate the learning outcomes) hygienic, technological and veterinary requirements for building and equipping facilities for the production of food and the production and sale of foods according to national and EU standards; identify hazards and risks in the production and distribution of food of animal origin - propose appropriate measures to improve the yield and quality of products in a specific animal production system and evaluate and propose the most appropriate way of exploiting breeding animals considering their fentypic genotypic characteristics -knowledge of xenobiotics and essential substances that may be present in animal foodstuff and through adverse effects on human health and connect the adverse effect on reproduction with certain xenobiotics, to link the occurrence of neoplasia with adverse effects, to connect immunotoxicity with adverse effects of individual xenobiotics or more - identify suspected zoonosis that primarily transmitted through products and raw materials of animal origin and to identify important risk factors in the transmission of zoonoses through products and raw materials of animal origin - choose the method of sampling materials and diagnostic procedures to objectively diagnose zoonoses transmitted through products and raw materials of animal origin - apply the procedures of general prophylaxis to protect against zoonoses transmitted through products and raw materials of animal origin, to assess the risk of disease in humans and recommend measures for the control and prevention of zoonoses transmitted through products and raw materials of animal origin - understand the biology, development, pathogenesis and paths of parasitism caused by foods of animal origin. - independently assess the benefit of economically exploitable animals for food production based on conditions in individual technological stages of production - propose appropriate sanitation measures in order to preserve the health of animals and humans and select the appropriate veterinary care waste in order to protect the environment and prevent the occurrence of diseases of animals and humans - conduct laboratory diagnosis and interpret the findings. FOOD HYGIENE AND TECHNOLOGY 1. Significance and sphere of veterinary activity in public health (Definition of the veterinary public health. Veterinary activity in the field of public health. Food hygiene and control systems according to the concept "from farm to table". Directives of the EU relative to the veterinary requirements in the production and trade of foodstuffs). The structure and activity of the Veterinary and Food Safety Office 4 h exercises + 2 h seminars + 4 h field exercise 2. Modern concepts of the veterinary-sanitary control in the production and trade of foodstuffs (Risk assessment in the function of ensuring the safety and quality of food. Risk management in the area of food safety. 2.5 Course content Risk communication. Application of HACCP concept in the production broken down in detail facilities. Prerequisite programs (GMP, GVP, GHP) in the strategy of food by weekly class and nutrition safety. Quality deregulation in the application of good schedule (syllabus) manufacturing practice). 4 h exercises + 2 h field exercises 3. Management of foodstuff quality and safety (Quality management systems in the food industry. Quality assurance. Approach to marketing management. Trends of organisation of the foodstuff production and control (monitoring) from the aspect of production and quality control

management. Production management and organisation of the quality

control of foodstuffs from the aspect of their safety, quality and

acceptability.

2 h seminars

4. Hygienic-technological and veterinary-sanitary conditions of construction and arrangement of food production facilities (Facilities for slaughter of ungulates, equidiae, poultry and rabbits. Facilities for treatment and cutting of meat of slaughter animals and game. Cooling and freezing plants, and facilities for storage of foodstuffs of animal origin. Facilities for meat processing and production facilities for foodstuffs of animal origin. Milk processing facilities).

10 h exercises

5. Biological, chemical and physical contaminants in the nutritional chain. (Risk evaluation. Risk and risk assessment in epidemiology. Risk assessment methods - qualitative and quantitative approach. Risk and supervision, targeted supervision, risk-based supervision. Microbiological risk assessment. Risk management. "Hidden risks". Contamination of foodstuffs with enteric pathogenic bacteria and residues of harmful substances. Systemic control of residues of harmful substances in animal products. Health safety of foodstuffs under the conditions of industrial production and modern procedures of processing and preservation with abundant use of additives)

4 h lectures + 2 h exercises + 2 h seminars

6. Alimentary infections and intoxications (Bilogical risks. Food-borne spoilage microorganisms).

9 h lectures + 4 h seminars

7. Food production in family farms (Production of foodstuffs in family farms, legal regulations, and veterinary-sanitary control. Ecological production).

1 h lectures

8. Food fraud

2 h lectures + 2 h seminars

ANIMAL HUSBANDRY

1. Risk factors and their relationship in different animal productions systems (the definition of certain risk factors in intensive, extensive and ecological production; methods for analysis the relationship between risk factors in animal production; elimination of risk factors in animal production).

2 h lectures

2. Genetic basis of animals and its impact on quality of animal products (methods of population and molecular genetics in quality evaluation of animal products);

2 h lectures

3. Methods and effects of selection of animals concerning quality of meet, milk eggs and other products (the definition of breeding and selection goals concerning quality of animal products)

2 h lectures

NUTRITION

1. Influence of animal nutrition on the quality of animal products (meat quality; milk quality; egg quality; functional feed and nutraceuticals); Feed additives (approved feed additives; forbidden feed additives);

2 h lectures

2. Deleterious substances in animal products (microorganisms; mycotoxins; heavy metals; hormones; pesticides; biogenic amines). Genetically modified feed (types of genetically modified feed; using of genetically modified feed)

2 h lectures + 2 h seminars

ANIMAL HYGIENE, ENVIRONMENT AND ETHOLOGY

1. Economic well-being usable animals for food production (the impact of environmental and breeding and technological factors on animal welfare)

	•						
	2 h lectures 2. The hygiene of drinking water (drinking water quality and health risks; legislation) 3. Disinfection in public health (types, methods and implementation of the disinfection measures to safeguard human and animal health),						
	2 h lectures 3. Veterinary Waste - health risk (faeces and animal matter), Insect pests of importance in public health (modern procedures and alternative methods for controlling harmful insects), Pest Control in Public Health (rodent control procedures in manufacturing plants and warehouses of						
	food of anima	ai ongin).		21	n lectures	
	ZOONOSES 1. Foodborne zoonosis (zoonoses caused by bacteria - salmon botulism, kampilobacteriosis, shigellosis, <i>E. coli</i> infections, bruc tuberculosis, anthrax, listeriosis, Q fever, zoonoses caused by p (GSE - Creutzfeldt-Jakob disease).						
			diagnostics and	control c	of zoonoses in our co	n lectures ountry	
	and in the wo	oria.			21	n lectures	
	PARASITOLOGY 1. Toxoplasma sp. 2. Sarcocystis sp. 3. Taenia sp. 4. Cysticercus celullosae 5. Cysticercus bovis 6. Alaria sp. 7. Family Anisakidae 8. Trichinella sp. 9. Giardia sp. 10. Cryptosporidium sp. 11. Echinococ sp. 12. Family Ascaridae 13. Visceral larva migrans 14. Strongiloidia 6 h ever					e 8. coccus

AGRICULTURAL ECONOMICS AND RURAL DEVELOPMENT

1. GENERAL INFORMATION							
	Assist. Prof. Denis Cvitković	1.6. Year of the study	3				
1.1. Course teacher		programme					
1.2. Name of the course	Agricultural Economics and Rural Development	1.7. Credits (ECTS)					
1.3. Associate teachers	Prof. Marina Pavlak, DVM, PhD, Assoc. Prof Dean Konjević, DVM, PhD	1.8. Type of instruction (number of hours L + S + E + e-learning)					
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course					
1.5. Status of the course	elective	1.10. Level of application of elearning (level 1, 2, 3), percentage of online instruction (max. 20%)					
2. COUSE DESCRIP							
Explain the meaning of the basic economic terms Explain the relation between rural area and agriculture, as well as the rational of integral and sustainable development of rural area present different theories of agricultural development, general economic, agricultural, regional and rural policy prepare the students for appropriate participation in preparing and implementation of the rural area and agricultural development prepare the students for the appropriate economic analysis methods implementation							
2.2. Course enrolment requirements and entry competences required for the course	Completed courses: Animal hygiene, Environment, behavior and animal welfare, General nutrition, Applied nutrition, Animal breed characteristics, Animal husbandry and animal production						
2.3. Learning outcomes at the level of the programme to which the course contributes	To be aware of economic and social environment in which veterinarians work, appropriately responding to challenges. To be aware of personal limitations. To be able to find for professional advice, help and support.						
After the successfully completed course and passed exam, student will be able: - to analyse and clarify the longterm tendencies in the rural area and agricultural development in Croatia - to participate in creating and implementing rural development and agricultural projects - to interpret measures of agricultural policy - to compile planned and actual calculations - to compute and interpret the business success indicators							
2.5. Course content broken down in detail by weekly class schedule (syllabus)	DAY 1. (6 hours) Definition of basic terms, Macroeconomic aggregations, Rural area and its activities DAY 2. (6 hours) Agriculture and rural development, Agriculture development theories, Placement of agriculture in economy development DAY 3. (6 hours) The tasks of agriculture, Agricultural structure and socio-economical traits of agricultural enterprises DAY 4. (6 hours)

ANATOMY OF LABORATORY ANIMALS

1. GENERAL INFOR	MATION						
1.1. Course teacher	Asst. Prof. Mirela Pavić Vulinović (course leader) Prof Damir Mihelić (course leader substitute)	1.6. Year of the study programme	2 nd (second)				
1.2. Name of the course	Anatomy of Laboratory Animals	1.7. Credits (ECTS)					
1.3. Associate teachers	Denis Leiner, DVM, Snježana Ćurković, PhD, DVM						
1.4. Study programme (undergraduate, graduate, integrated)	inegrated 1.9. Expected enrolment in the course						
1.5. Status of the course	elective 1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)						
2. COUSE DESCRIP	TION						
2.1. Course objectives	Introduce students to the basics of a animals.	•	·				
2.2. Course enrolment requirements and entry competences required for the course	Undergraduate courses in anatomy of domestic animals (Anatomy with organogenesis of the domestic animals I., II.)						
2.3. Learning outcomes at the level of the programme to which the course contributes	The acquisition of knowledge of the body's anatomy and comparative anatomy of small rodents, which are used as laboratory animals and pets as a basis for the superstructure of pathology and clinical sciences in further study.						
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	1st Overcoming basic principles sectional techniques of laboratory animals 2nd Describe the basic structure of the body most commonly used laboratory animals. 3rd Identify the basic characteristics of comparative anatomical structure of laboratory animals and to compare them with the anatomy of domestic animals 4th Connect knowledge with future professional work in scientific and technical laboratories.						
2.5. Course content broken down in detail by weekly class schedule (syllabus)	1. Structure of the chicken egg. The embryonic development of chicken embryos (structure of the chicken egg; preembryonal development of chicken embryos, embryonal development of chicken embryos; bloodstream of the chicken embryo allantoic circulation of chicken embryos; chicken embryos amnion, yolk sac of the chicken embryo, allantoic sac of the chicken embryo ductus omphaloentericus of the chicken embryos); 2. experimental strains of mice and rats (strains of experimental mice and rats, homozygous and heterozygous animals; getting highly related strains of laboratory animals); 3. Anatomy of laboratory animals (mammary gland of the mouse and rat, brown adipose tissue, the digestive organs of the mouse, rat and guinea pigs; respiratory organs of the mouse, rat and guinea pigs; urinary-genital organs of the mouse, rat and guinea pigs; circulatory organs of the mouse, rat and						

	and an along and and a planta of many and and and and a planta of many							
	guinea pigs; endocrine glands of mouse, rat and guinea pig, mouse brain, rats and guinea pigs; blood sampling of the mouse, rat and guinea pigs); 4. Reproduction and Embryology laboratory animals (breeding of laboratory animals; vaginal plug; preembryonal mouse development, the embryonic development of the mouse, the mouse fetal development, fetal membrane mouse, mouse placenta, skeletal development of the mouse). Common anatomical characteristics of rats, mice, hamsters, guinea pigs and rabbits - 2 hours Section of the rat: open skin, locomotor system, mammary gland - 4 hours Section of the rat: opening the abdominal cavity, digestive organs, pancreas, liver, spleen - 4 hours Section of the rat: opening the abdominal cavity, digestive organs, pancreas, liver, spleen, - 4 hours Section of the rat urogenital organs - 4 hours Section of the rat: opening the thoracic cavity, pleura, respiratory organs, the heart, large blood vessels - 4 hours Section of the rat head and neck, nose and mouth, brain 4 hours Structure of the chicken embryo - 4 hours

ARCHAEOZOOLOGY

1. GENERAL INFORMATION						
1.1. Course teacher	Full Prof. Tajana Trbojević	1.6. Year of the study	Second year, FOURTH			
	Vukičević	programme	semester			
1.2. Name of the course	ARCHAEOZOOLOGY	1.7. Credits (ECTS)	2			
1.3. Associate teachers	Prof. Snježana Kužir; Kim Korpes, dr. med. vet.; Magdalena Kolenc, dr. med. vet	1.8. Type of instruction (number of hours L + S + E + e-learning)				
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course				
1.5. Status of the course	Elective	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	level (application of VEF-LMS)			
2. COUSE DESCRIP						
2.1. Course objectives	Students will get inside the basic archaeozoological methods, learn to determine skeletal elements and taxonomic affiliation, learn to classify animal's age and sex based on tooth eruption and attrition and long bones epiphysis fusing/unfusing, learn to evaluate animals withers height and biomass, know how to recognize basic taphonomical processes on animal bones, recognize and distinguish traces on bones: chewing marks, disarticulation and butchering traces, animal bones and horns processing into tools and ornaments and learn

course 2.3. Learning	Maximum number of stude	nts: 20 n of the courses, students wi	Il ha familiar with the			
outcomes at the level of the		nical science to other profess				
programme to which the course contributes	·					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Following successful completion of the course, students will be able to: define archaeozoology and taphonomy; identify bone elements, taxonomic affiliation, basic pathological changes and taphonomical traces on animal bone remains from the archaeological sites; choose ways of estimation of animals age, sex, withers height and biomass based on its skeletal remains; interpret archaezoological findings; design archaeozoological analysis to the entire archaeological report from a specific site.					
2.5. Course content broken down in detail by weekly class schedule (syllabus)	1. Introduction to archaeozoology (definition and objectives of archaeozoology, historical development and the division of archaeozoology, domestication and its effect to the morphology of the mammal bones); 2. Basics of skeletal system of mammals and birds (complementing knowledge gained from comparative osteology of mammals and birds; determination of skeletal elements and taxonomic affiliation); 3. Laboratory processing of archaeological materials (preparation, marking and preservation of animal bone remains, quantification of samples (MNI, NISP), determining the age and sex, identification of pathological changes in the bones, teeth and horns of animals); 4. Basics of					

	osteometry (measures on the bones, osteometric indices, estimate height and biomass of animals); 5th Taphonomy (definition of taphonomy, identification of taphonomic changes and time of their creation, marks on the bones, bone and horn processing to tools and jewelry); 6. Interpretation of archaeozoological findings in the archaeological report (writing report, bones storage, archiving documents of archaeozoological samples).						
	Lectures: Introduction to archaeozoology (2 hours) The basics of the skeletal system of mammals and birds (2 hours) The basics of the skeletal system of fish and amphibians (3 hours) Primary and secondary archaezoological analysis (5 hours) Introduction to taphonomy (2 hours) Interpretation of archaeozoological findings (1 hour) Exercises: Determination and quantification of samples (5 hours) Osteometry and osteometric indexes (3 hours) Evaluation of animals age, gender, withers height and biomass (3 hours) Identification of the pathological and taphonomic changes (2 hours) Writing reports, filing of documents (2 hours)

ASSISTED REPRODUCTION IN VETERINARY MEDICINE

1. GENERAL INFORMATION							
1.1 Course teacher	Assoc. Prof. Martina	1.6 Year of the study	6 th (XI semester)				
1.1 Course teacher	Lojkić, PhD	programme	0				
1.2 Name of the course	Assisted reproduction in veterinary medicine	1.7 Credits (ECTS)	2				
1.3 Associate teachers	Assoc. prof. Iva Getz, PhD; prof. Juraj Grizelj, PhD; assoc. prof. Silvijo Vince, PhD; prof. Nikica Prvanović Babić, PhD; assist. prof. Branimira Špoljarić, PhD; Ivan Butković, DVM, Juraj Šavorić, DVM	1.8 Type of instruction (number of hours L + S + E + e- learning)	5+10+15				
1.4 Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9 Expected enrolment in the course	10				
1.5 Status of the course	Elective	1.10 Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)					
2. COUSE DESCRIPTION		,					
2.1 Course objectives	The course is focused on application of embryo transfer in farm animals: superovulatory treatment, embryo flushing, evaluation of embryos, transfer of embryos to recipients. Students will also be acknowledged with application of other biotechnologies such as collection of oocytes for fertilization in vitro (transvaginal ultrasound guided ovum pick up, laparoscopic aspiration), in vitro production of bovine embryos, embryo biopsy and sexing, embryo evaluation, cryopreservation of embryos and regulations related to international trade of embryos.						
2.2 Course enrolment requirements and entry competences required for the course	Farm Animals and Horses						
2.3 Learning outcomes at the level of the programme to which the course contributes	breeding. Assisted rep superovulation, in v introduced to overcom of offspring from select in farm animals. This powerful tool for ra technologies will play a reproductive performa	The course contributes to higher competences in the field of animal breeding. Assisted reproductive technologies like artificial insemination, superovulation, in vitro fertilization, embryo transfer have been introduced to overcome reproductive problems, to increase the number of offspring from selected female's and to reduce the generation intervals in farm animals. This advanced reproductive technology provides a powerful tool for rapid change in animal population. As these technologies will play an important role in future perspective for efficient reproductive performance in livestock, this course presents an important part in education of new generation of students.					

2.4 Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Acknowledgment with application of assisted reproduction in veterinary medicine Selection of donor and recipient cows in MOET Synchronization of donor and recipient cows Transfer of embryos in recipients							
2.5 Course content broken down in detail by weekly class schedule (syllabus)	1. Introduction to assisted reproductive technologies; 2. Embryo Transfer in cattle (selection and management of donor and recipient cows, superovulation, A.I., flushing, isolation and evaluation of embryos, embryo transfer); 3. Embryo Transfer in small ruminants (synchronization and superovulation of donors and recipients, superovulatory response, mating and A.I., flushing, isolation and evaluation of embryos, laparoscopic transfer of embryos); 4. Embryo Transfer in mare (synchronization, mating and A.I. of donor mares, flushing, isolation and evaluation of embryos, synchronization and management of recipients, transfer of embryos); 5. In vitro production of embryos (source of oocytes: slaughterhouse ovaries, OPU, in vitro maturation of oocytes, in vitro fertilization, semen preparation for IVF, in vitro culture. 6. Evaluation of embryos; 7. Cryopreservation of embryos, 8. Introduction to advanced biotechnologies (embryo sexing, embryo splitting, transgenesis, cloning), 9. Preservation of endangered and indigenous animals, Cryobank.

BIOLOGICAL TRACES AND EVIDENCES IN FORENSIC VETERINARY MEDICINE

1. COURSE DECRIPTION – GENERAL INFORMATION							
1.1 Course teacher	Prof Krešimir Severin	1.6 Year of study	6				
1.7 Name of the course	Biological traces and evidences in forensic veterinary medicine	1					
1.8 Associate teachers	Assist Magdalena Palić, DVM	1.8 Type of instruction (number of hours L+S+E+e-learning)	2+4+7+2				
1.9 Study programme (undergraduate, graduate, integrated)	Integrated	1.9 Expected enrolment in the course	10-30				
1.10 tatus of the course	Elective course	1.10 Level of use of e-learning (1, 2, 3 level), percentage of instruction in the course on line (20% maximum)	2, 10%				
2. COURSE DESCRIPTION							
2.1 Course objectives 2.2. Enrolment	medicine to the branch with the identification of preserve evidence and analytical procedures a competences to be able complex decisions in the authorities, the inspection	is to introduce students of forensic veterinary m f biological evidence, prothe level of credibility of and acquired knowledge, to independently asserte case of claims submitted on and legal or natural pof all courses including 1	redicine that deals ocedures to results concerning skills and sand make ted by the judicial persons.				
requirements and required entry competences for the course		-					
2.3 Learning outcomes at the level of the study programme to which the course contributes	 apply the acquired knowledge (of anatomy, histology, pathology, molecular biology, administrative procedures and inspection control, Civil, Misdemeanour and Criminal procedure in forensic veterinary medicine) with newly acquired ones (identification of biological traces) in the field of forensic veterinary medicine to use in veterinary medicine positive effects on expertise and competence of future veterinary staff in dealing on requests by judicial authorities, inspection control legal and natural persons 						
2.4 Expected learning outcomes at the level of the course (4-10 learning outcomes)	veterinary staff in dealing on requests by judicial authorities, inspection control, legal and natural persons o higher expertise and attention to the actions which is aimed at identification of biological traces in forensic veterinary medicine o knowledge of formal and material legislation of Civil, Misdemeanour and Criminal Act o ability to identify the origin of biological traces from various animal species considering morphological / histological characteristics o ability to use the most appropriate molecular techniques considering demands for identification and material traces						

- knowledge of the professional witness and expert witness duties in report writing and giving evidence in court
- represent the opinions about the laboratory reports considering laboratory models (quality assurance level: Government-funded dedicated wildlife DNA forensics facility, Private forensic genetic facility offering wildlife DNA services, University or institutional research facility with separated forensic laboratory space, Multi-use research laboratory) and used methods (validated / non validated)

Lectures (2)

 Application of biological traces identification in forensic veterinary medicine; official (responsible) person obligation in collecting material biological traces pursuant to the provisions and principles of formal (Misdemeanour Act and Criminal Code) and material legal acts (Veterinary Act, Nature Protection Act, Animal Protection Act)

Seminars (4)

- Classification of biological traces due to the origin and demands of veterinary medicine (traces of animal origin tissue, hair, feathers, animal products, animal feed - including traces of plant origin).
- Processing and dealing of court case (Misdemeanour and/or Criminal procedure) where the animal is considered as victim, as witness, as perpetrator; Specificity of identification requirements in case of protection and conservation of endangered species, issuance of certificate of pure breeding and Pedigree of breeding animals, analysis in inspection control of animal products or animal feed origin.

Exercises (7)

- Collecting, labelling and insuring of biological traces by official persons; responsibility of police officers, court official persons, veterinary inspectors and veterinary staff.
- Selection of identification methods according to their specificity and sensitivity, procedure demands, quantity and quality of biological traces; Morphological and histological methods of tissue identification (bones, muscles, feathers, hairs), gas chromatography techniques (forensic population based on fatty-acid profile), molecular methods (analysis of mitochondrial and nuclear DNA genetic markers; most commonly used genetic markers in forensic veterinary medicine in order to determine species from different specimens or individual identification within a species / breeds including determination of geographic origin e.g. STR short tandem repeats-SSR simple sequence repeats, RFLP restriction fragment lenght polymorphism, SNP single nucleotide polymorphism) and immunohistochemical methods of tissues and cells identification.
- Credibility of forensic analytical method data relating to laboratory quality assurance level and used methods (validated / non validated)
- Special requirements in writing records, opinions, court expertise (expert witness report)

E-learning (2)

Court case example, interactive review of selected cases from the moment of biological trace "material trace" collection \rightarrow setting request for identification \rightarrow transport of sample to forensic laboratory (laboratory for DNA analysis) \rightarrow providing storage of sample and traceability control \rightarrow result of requested analytic methods \rightarrow interpretation of results \rightarrow

2.5 Course content broken down in detail by weekly class schedule (syllabus)

	writing expert witness report \rightarrow to the status of "material evidence".

CHEMISTRY OF NATURAL COMPOUNDS

1. GENERAL INFOR	MATION					
1.1. Course teacher	Assist. Prof Luka Krstulović	1.6. Year of the study programme	1-6			
1.2. Name of the course	Chemistry of Natural Compounds	1.7. Credits (ECTS)	2			
1.3. Associate teachers	Assistant professor Kristina Starčević	1.8. Type of instruction (number of hours L+S+E+e-learning)	L-15+S-9+E-6			
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course				
1.5. Status of the course	elective	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRIP						
2.1. Course objectives	Chemistry of natural compounds deals with groups of organic compounds which were only partially described in the Medical chemistry course. The objective of this course is to expand student's knowledge on basic organic chemistry which is needed for attending and understanding Biochemistry in Veterinary Medicine, Physiology of Domestic Animals and other courses during the Veterinary medicine studies, which demand knowledge of structure and chemistry of biologically important chemical compounds. Knowledge of important natural compounds their actions and biosynthesis will allow easier comprehension of the chemical changes that occur in animal and plant organisms.					
2.2. Course enrolment requirements and entry competences required for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	Learning outcomes at the level of the programme: 1. Understanding the basic science on which veterinary medicine is based 2. Research: the ability to search the literature, databases and other information sources, the ability to design and conduct experiments in the field of veterinary medicine, to interpret results and draw conclusions and the ability of use laboratory equipment and make critical analysis of test results 3. Practical skills: the ability of consolidation of the theoretical knowledge and practical skills within the fields of veterinary medicine 4. Complemetary skills: the ability to conduct independent research and work in a team, the ability of presenting the results – oral and in writing					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Learning outcomes at the level of the course: Ater successful completion of the course the student will be able to: 1. differentiate main groups of natural compounds – secondary metabolites; 2. compare the structure and action of secondary metabolites; 3. compare biosynthetic and laboratory formation of important natural compounds: 4. independently use methods for the extraction of compounds from natural sources; 5. propose method for the separation of compounds based on their properties.					

2.5. Course content broken down in detail by weekly class schedule (syllabus)	Definition and differentiation of secondary metabolites. Biosynthesis, laboratory synthesis, properties and action of natural compounds: vitamins, terepenes, carbohydrates, steroids, alkaloids. Methods for separation and identification of natural compounds, examples of laboratory and industrial synthesis, application in human and veterinary medicine. Isolation of caffeine. Spectrophotometric determination of lycopene from tomato juice.

CLINICAL PHYSIOLOGY

1. GENERAL INFORMATION						
1.1. Course	assist. prof. Lana Pađen,	1.6. Year of the study	4			
teacher	DVM	programme				
1.2. Name of the course	Clinical Physiology	1.7. Credits (ECTS)	2			
1.3. Associate teachers	Prof. Jasna Aladrović, DVM	1.8. Type of instruction (number of hours L + S + E + e-learning)	15L+ 15E			
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course	10			
1.5. Status of the course	elective	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	-			
2. COUSE DESCRIF						
2.1. Course objectives	The aim of the course is to prepare students for clinical diagnosis by referring them to research and laboratory procedures that are tailored to specific production cycle and mode of exploitation of production animals. Clinical Physiology gives students an insight into the importance of determining reference intervals of hematological and biochemical parameters in a representative sample and factors that could affect the information contained herein. It instructs students on the importance of clinical enzymology associated with a particular physiological status such as intensive growth and fattening, pregnancy, lactation, and other specific production circumstances. Lectures direct the student to connect the physiological concepts and introduce them to the methodology of scientific research. The organism is seen as a system and physiology is interpreted as systemic clinical physiology. Exercises are used for better understanding of laboratory procedures in the sampling, processing and analytics. Students develop independence in

2. COUSE DESCRI						
2.1. Course objectives	The aim is to give students the ecological and sociological perspective of conservation of rare and endangered species. The course is a specific extension of the course «Zoology», and specifically of the section «basic ecology». Rare and endangered species do deserve special attention. Legal protection is typically basic but not sufficient mean to secure the species survival. Analyzed are the mechanisms of complex management that include all human-interest groups, with positive and negative attitude towards the species in concern. The examples of need for such complex management are species like bear, wolf, lynx, dolphins, monk seals, birds of prey including fish eating birds. International and Croatian models are discussed. Mutual understanding of all interest groups for the role of each species is to be stimulated. The role of veterinarians is exemplified.

ENGLISH FOR ACADEMIC PURPOSES I

1. GENERAL INFO	RMATION					
1.1. Course teacher	Dubravka Vilke-Pinter, Ph.D.	1.6. Year of the study programme	1			
1.2. Name of the course	English for academic purposes I	1.7. Credits (ECTS)	4			
1.3. Associate teachers		1.8. Type of instruction (number of hours L+S+E+e-learning)	8 hours of L+ 40 hours of S (of which 12 hours e- learning)+ 12 hours of E			
1.4. Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course				
1.5. Status of the course	elective	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRI						
2.1. Course objectives	The course English for Academic Purposes I is specially designed for the target group of learners, that is students of veterinary medicine. The general objective of the course is to develop students' overall written and oral competence in English to enable them to communicate efficiently in a professional setting. Special empahsis is given to professional literature analysis. Texts from various information sources (manuals, professional and scientific journals, popular magazines, web pages) are analysed to acquaint students with various types of discourse. Students are acquainted with texts belonging to different genres and having different content, function, style and form (summary, report, discussion, essay, etc.), as well as with the language structures typically used in technical texts. Students develop text organisation skills through paragraph and essay writing, as well as the abilities to					
2.2. Course enrolment requirements and entry competences required for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	The course focuses on assisting write effectively and fluently in a acquainted with the different type English and the discourse charactudents improve and develop to skills of reading research literate proficiency, that is, presenting, following complex lines of arguing	an English speaking academing bes of discourse, in particular acteristic of the field of vetering their overall academic performure. A particular focus is also interpreting and connecting the ments and taking part in mea	c setting. By getting of that of academic hary medicine, nance as well as the put on attaining oral houghts as well as ningful discussions.			
2.4. FEED ADDITIVES - HEALTH MODULATORS

1. GENERAL INFO	RMATION						
1.1. Course teacher	Full professor Željko Mikulec, DVM, PhD	1.6. Year of the study programme	3rd				
1.2. Name of the course	Feed Additives - Health Modulators	1.7. Credits (ECTS)	1				
1.3. Associate teachers	Full professor Tomislav Mašek (vice course leader), Associate Professor Hrvoje Valpotić, Assistant Professor Diana Brozić, Assistant Ana Marija Kovač, DVM	1.8. Type of instruction (number of hours L+S+E+e-learning)	3L + 2S +10E				
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course					
1.5. Status of the course	Elective	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	2nd level, 10%				
2. COUSE DESCRI	PTION						
2.1. Course objectives	The course objective is to show students the newest informations about manufacturing and application of feed additives and ensure the student's acquired knowledge, skills and competences are adequate to evaluate and make complex decisions in field of application of different essential and nonessential feed additives and dietetic preparations						
2.2. Course enrolment requirements and entry competences required for the course							
2.3. Learning outcomes at the level of the programme to which the course contributes		synthesize current knowledge about different feed additives assess the implications of feed additives application in modern animal production					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	to classify feed additives according to its composition and way of using to assess the suitability of certain feed additives in different animal production systems knowledge of influence of certain feed additives on animal health						
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Lectures (3 hours): • Introduction (Feed-food chain. World's trends in food and feed quality and safety.) • Feed additives – importance and classification (The role of additives. Essential and nonessential additives. Micro and macro additives.) Seminars (2 hours): • Antibiotics (Antibiotic use in animal feed – in the past and nowdays.)						
	Exercises (10 hours): • Extramural work - visit to fe	eed aditive factory					

	 Essential microadditives (Vitamins. Microminerals. Synthetic aminoacids.) Probiotic preparations (Probiotics. Prebiotics. Simbiotics. Fitobiotics.) Enzymes (Enzymes in monogastric animal feeding. Enzymes in ruminant feeding. Production and types of multienzyme preparations.) Antioxidants (Antioxidant function and types. The role of antioxidants in animal and human nutrition.) Emulsifiers (Function and types of emulsifiers.) Pigments (Production and types of pigments.) Flavours (Function and types of flavours.) Acidifiers (Organic acids as feed acidifiers. The purpose and applying of acidifiers.) Tannins (Tannins – antinutritive compounds or additional mean of therapy.) Effect of nutraceuticals on the health status of animals and humans. (Current additives in diets of animals and people. Effect of nutraceutics on the immune response of animals and humans.)

At the same time, the subject is the upgrade of an obligatory source. Piclogy and pathology of agustic organisms.					
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	of an obligatory course Biology and pathology of aquatic organisms. By successfully mastered the material of the subjects, the student will be able to: -designate and define the basic elements of the macroscopic structure of fish tissues and organs; -designate and define the basic elements of the microscopic structure of fish tissues and organs; -compare the structure of certain organs in different fish species; -identify and analyze the histological slides of various organs and tissues; -explain the structure and development of fish.						
2.5.Course content broken down in detail by weekly class schedule (syllabus)	Peculiarities of the Characteristics of tele cartilaginous fish. Histor of muscle, contractile the digestive system esophagus; stomach, pyloric endings; liver	cture (teaching rules, so body shape due to so eost skeletal system are ological characteristics of characteristics); 4 Histolog of fish due to the diet intestine, spiral intestine intestine, spiral intestine intestine, spiral intestine intestine, spiral intestine	wimming manners; 3 and support system of fish muscle (a division ogical characteristics of (mouth and pharynx, e in cartilaginous fish; ory system (heart of				

Histological characteristics of the gill of teleost and cartilaginous fish, breathing in cartilaginous fish; breathing in teleost, lungfish; 7 Histological structure of fish bladder; gas gland; oval; 8 Urinary system (opistonefros, histology of the kidney, the difference in the structure of the kidney of marine and freshwater fish); 9 Histology of reproductive system (ovaries, type of fish ovarian, oogenesis, testes, type of testes; spermatogenesis; genital canal); 10 Nervous System (anterior, middle and posterior brain, spinal cord, brain nerves, peripheral nerves, autonomic nervous system); 11 Sensory and electric organs (eye, eye shape and types; structure of the eyeball, eye adjustment to the amount of light, the inner ear, the labyrinth; otoliths; Weber's body; olfactory organ, lateral line; sensory buds; electroreceptors, electric organs); 12 Histology of the endocrine system (pituitary, pineal gland; urophysis; thyroid; ultimobranchial gland; interrenal gland; chromafin cells, the endocrine part of the pancreas); 13 Skin and scales (epidermis and epidermal glands, dermis, scales and forms of scales, poisonous gland; the color of the body; chromatophores and their types; pigments of chromatophores; mechanism of changes the color of the body); 14 Bioluminescence (luminous bodies; structures of luminous organs; alveolar and sac-like luminous bodies; visceral light organs, bacterial and chemical bioluminescence).

Seminars:

- -Basics of fish systematic, body shape, skin and scales
- -Musculoskeletal System
- -Digestive System
- -The Circulatory System
- -Respiratory System
- -Urinary System
- -Reproductive System
- -The nervous system, sensory and electric organs
- -Endocrine System
- -Swim bladder

Exercises:

- -Species characteristics (5)
- -Histology of skin, pigment cells and the scales (2)
- -Anatomy and histology of bone and muscle histological characteristics (2)

	-Parts of	the dige	stive tube a	ınd histoloç	gical	characteristic	s of the

FUNDAMENTALS OF AGRONOMY

1. GENERAL INFO	RMATION					
1.1. Course	Željko Pavičić, DVM, PhD,					
teacher	Full Professor	1.6. Year of the study programme	II			
1.2. Name of the	Fundamentals of					
course	agronomy	1.7. Credits (ECTS)	2,5			
1.3. Associate teachers	Gordana Gregurić Gračner, PhD, Associate Professor; Mario Ostović, PhD, Associate Professor	1.8. Type of instruction (number of hours L+S+E+e-learning)	L 12+ S 11+ E 7			
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course				
1.5. Status of the course	Elective course	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRI	IPTION					
2.1. Course objectives	Livestock and crop production constitute a production unit which is expressed not only by their organic connection, but also with their spatial location. Therefore, the aim of course is that the students acquire knowledge on the impact of weather and climate on plant's life, biological crops and yield, the natural laws on the basis of which a yield could be produced, as well as on the compaction of soil by the antropogenic influence. In the center of discussion is agrotehnicque in all of its aspects and management systems in plant production. Special attention is paid to the ecologic (organic) and sustainable agriculture, so students will gain the knowledge on how to preserve the environment, clean air and soil, drinking water and associated quality of food.					
2.2. Course enrolment requirements and entry competences required for the course	Passed compulsory course Environment, Animal Behaviour and Welfare with minimum grade 4 (B). Mentor type of teaching, up to 3 students.					
2.3. Learning outcomes at the level of the programme to which the course contributes	Understanding of agroecological fundamental facts in plant production					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes) 2.5. Course	After successful completion of the course the student will be able to: -explain the impact of weather and climate effects on plant life -recognize differences in soils and describe soil treatment methods -describe nutrients proceedings in soil - evaluate the right time for planting and distinguish sowing methods - explain the natural laws on the basis of which a yield could be produce - illustrating the ways for saving and storing agricultural products - define the principles of organic and sustainable agricultural production 1 Introduction to agronomy (Basic elements for organic life; Atmospheric impact					
content broken down in detail by weekly class schedule (syllabus)	ecological factor); 2 Soil (Soil definition, chartypes; Soil and vegetation	eather and climate, Natural ecosy racter and function; Basic characte relation; Soils in Croatia); Land cu d modern approach of land cult	eristics if main soil			

	cultivation to physical characteristics and processing in soil; Basic and additional land cultivation; Land cultivation systems); 3 Plants feeding and plants nutrients (Nutrients proceedings in soil; Fertilization; Fertilizers); 4Sowing (Seeds; Field crop seeds characteristics; Preparation of seed for sowing; Quantity determination of seeds for sowing; Sowing types; Sowing time); 5 Crops care (Abiotic and biotic negative factors; Systematic division of crop care grips: Sequence of crop care grips; Veiling of production areas); 6 Weeding (Weed concept and definition; Weeding measures); 7 Harvest, storing and conservation of agricultural products (Grain crops; Root and tuberous crops; Stern crops); 8 Plant production systems (Crop rotation; Free crop shift; Monocrop); 9 Biological agronomy (Biological agronomy directions; Scientific principles of biological agronomy; Legislative regulation on biological agronomy); 10 Maintainable agronomy (General notion about land cultivation in terms of maintainable agronomy; Ecologically balanced measures of managing in maintainable agronomy; Water managing in different plant production systems).

2. COUSE DESCRI					
2.1. Course objectives	Absolved courses in the curriculum "Hunting and nature protection" which elaborates topics from hunting methodologies and technologies, processes the shot game and manipulate the traffic from venison students acquire the necessary basic knowledge on hunting management and protection of natural habitats, as well as special knowledge which enables them to acquire the hunting diploma recognized by CHA (Croatian Hunting Association). Students who are in track 'Veterinary public health and food hygiene', as well as the students oriented to track 'Farm animals and horses' get to know the specifics of the exploitation, processing and trade in wildlife and its parts for the purposes of hunting and veterinary inspection. Such programs not only to be rounded knowledge and skills acquired complete a similar undergraduate amenities, but complements the knowledge of the legal provisions that regulate the cultivation and utilization of wildlife in accordance with ZOL (Hunting Act). It is assumed that students would develop their professional knowledge consideration to specific situation on the ground, consideration of legislation in the light of economic hunting practices, and

2. COUSE DESCRIPTION	ĺ					
2.1 Course objectives 2.2 Course enrolment requirements and entry competences required for the	the matters relative to the game and game birds, at the processing of their mapplicable in the proceding game and their meat, path handling, storage, processibilities of production.	The aim of the subject is to make the students well acquainted with all the matters relative to the hunted and bred game, either large or small game and game birds, and in particular with the procedures applied in the processing of their meat. The acquired knowledge is specific and applicable in the procedures of veterinary control of hunted (and bred) game and their meat, particularly with respect to hunted and bred game handling, storage, processing and cutting of game meat, and possibilities of production of game meat products. The course can enroll only students of study track "Hygiene and technology of animal food and veterinary public health"				
course 2.3.Learning outcomes at the level of the programme to which the course contributes	activities of veterinary pu	hygiene and quality of gublic health and food safe	ety.			
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	By the completion of the course students should be able to: - interpret the results of testing of hygienic quality of game meat - know the legislation in the field of hunted and/or wild game hygiene - differ the type of game farming: hunted and/or wild game - explain the organization of veterinary controls in processing, storage and transport of game meat

HYGIENE AND QUALITY OF FISH MEAT

1. GENERAL INFORMATION					
1.1. Course teacher	Prof. Lidija	1.6. Year of the study	V/VI		
1.2. Name of the course	Kozačinski, PhD Hygiene and Quality of Fish Meat	programme 1.7. Credits (ECTS)	2		
1.14. ssociate teachers	Prof. Lidija Kozačinski, PhD, prof. Željka Cvrtila, PhD, assoc. prof. Nevijo Zdolec, PhD, Tomislav Mikuš, PhD, Marta Kiš, DVM	1.8. Type of instruction (number of hours L+ E+S+e-learning)	9+6+12		
1.4.Study programme (undergraduate, graduate, integrated)	integrated	1.9. Expected enrolment in the course			
1.5 Status of the course	elective	1.10.Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	20%		
2. COUSE DESCRIPTION					
2.1.Course objectives 2.2.Course enrolment requirements and entry competences required for	After audit of the course, a student will complete one's own already acquired knowledge of the major, obligatory subject Hygiene and technology of foodstuffs. The subject explains in details individual parameters of evaluation of health safety of fish. Thus, the students will be able to perform independently the evaluation of the safety of fish with the use of modern methods of evaluation of the quality, freshness, shelf life and hygienic quality of fish. The acquired knowledge is specific and applicable in activities related with veterinary inspection and control in the production and trade of fish, and with veterinary public health. The course can enrol only students of orientation "Hygiene and technology of animal food and veterinary public health"				
the course 2.3. Learning outcomes at the level of the programme to which the course contributes		es of hygiene and quality of fis nealth and food safety	sh within the activities		
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	After successfully completing this course the student will be able to: - know the composition and properties of fish - distinguish certain categories of fish - interpret the results of microbiological analysis of fish - explain the significance of the findings of parasites, heavy metals and other chemical constituents in assessing the health of fish				
2.5. Course content broken down in detail by weekly class schedule (syllabus)	other chemical constituents in assessing the health of fish 1. Fish as food product (Composition and properties of fish. Categorisation of fish). 2. Welfare of fish and influence on quality of fish meat. 3. Evaluation of shelf life of fish (Stunning of fishes. Post-mortem changes in fish (sensory, autolytical, bacterial changes, lipid oxidation and hydrolysis). Influence of the storage temperature on the quality of fish (fresh, frozen, salted and smoke-treated fish, comminuted fish meat); Evaluation of fish quality.				

	 Microbiological quality of fish and fish products (Microbiological procedures in the evaluation of the fish freshness. Natural microflora of fish. Specific spoilage microorganisms. Contamination of fish with pathogenic bacteria). Safety and hygienic quality of fish (Fish parasites as causal organisms of zoonoses. Procedures for determination of the presence of larvae of Anisakis spp. Chemical risks. Finding of heavy metals in fish. Histamine. Biotoxins. Ciguatoxin.)

¹ — For activity on seminars and exercises student can get max. 10 points and min. 5 points. Activity on seminars is obligatory and is graded acording to successfuly prepared and held seminar and for positivelly oriented answers with min. 3 points and max. 6 points (for positivelly oriented answers 0,2 points can be given, and for 5 answers it is 1 point). For activity on exercises (successfully performed practical part) student can get min. 2 and max 4 points (0,5 points per activity).

 $^{^{2}}$ – Before oral exam student have to prepare written seminar which brings min. 20 and max. 32.

	 ³ – Oral exam gives 24 to 40 points. Student answers 10 questions, and for 1 question can get 4 points. Student can aply for the final exam with min 36 points. ⁴ – Final grade is defined quantitatively, with numeric point scale and a grade corresponding to that scale, from 1 to 5. With grade 1 (one) student is graded if she/he didn't pass the course, i.e. he failed on the exam. For each student its attendance and activity is registered in its personal form, together with its success on the colloquium, what teacher uses to form final grade. Points Grade do 59 1(F) 60-76 2 (D,E) 77-84 3 (C) 85-92 4 (B) 93-100 5 (A)

1.5.Status of the course	elective	1.10.Level of application of elearning (level 1, 2, 3), percentage of online instruction (max. 20%)				
2. COUSE DESCRIPTION	DN					
2.1.Course objectives	To introduce students to the characteristics of physiology of amphibians and reptiles: physiology of reproduction, digestion, respiration, hematology characteristics and biochemical parameters. The course gives students a basic understanding of the regulation of homeostasis in amphibians and reptiles: neurophysiology, endocrinology and oversight of structure and function of special sensory organs. Students learn about thermoregulation in amphibians and reptiles, as well as about the specificities of metabolic processes.					
2.2.Course enrolment requirements and entry competences required for the course	-					
2.3.Learning outcomes at the level of the programme to which the course contributes	During class students will learn about basic comparative characteristics of amphibians and reptiles physiology. The course follows after the Physiology of Domestic Animals course, and represents a good introduction to the knowledge of breeding, keeping and diseases of amphibians and reptiles.					
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 - understanding of the biology of amphibians and reptiles - understanding of the basics of breeding in amphibians and reptiles, - understanding of the basics of breeding in amphibians and reptiles, - understanding of thermoregulation and maintenance processes in the homeostasis of amphibians and reptiles - analysis of health conditions, rearing and feeding of amphibians and reptiles 					
2.5.Course content broken down in detail by weekly class schedule (syllabus)	The development of life in the water, adjusting to the life on la cycle, the female and male rep developing tadpoles, metamor of lizards. Physiology of digest characteristics of digestion of a physiology, physiology of the v	and. Physiology of reportance of the productive organs, vive phosis, the developmion, food intake, physamphibians and reptile	oroduction, sexual iparity, ovoviviparity, ent of the offspring siological es. 	(a student must attend minimal 8 exercise hours in order to gain minimal 5 points)	
Attending seminars (15 hours)	5 (coefficient 0,6) 5/0,6 = 8 exercise hours (a student must attend minimal 8 seminars hours in order to gain minimal 5 points)	9 9/15 = 0,6 (coefficient 0,6)
Participation at exercises and seminars (10 points1)	6 6/1 = 6 (coefficient 1) (a student must collect minimal 6 points in order to gain minimal 6 points)	10 10/10 = 1 (coefficient 1)
Continuous knowledge checking (8 points²)	20 20/4 = 5 (coefficient = 4) (a student must collect minimal 5 points in order to gain minimal 20 points)	32 32/8 = 4 (coefficient = 4)
Final exam (written) (40 points³)	24 24/1 = 24 (coefficient 1) (a student must collect minimal 24 points in order to gain minimal 24 points)	40 40/40 = 1 (coefficient 1)
Total	60	100

¹-10 points (writting of the report from field exercises (4 points)+preparation of seminar work during semestar (3 points if in PP additional 3 points)

The final grade is made on the basis of total sum of gained points as follows:

Points	Grade
up to 59	1 (F)
60-68	2 (E)
69-76	2 (D)
77-84	3 (C)
85-92	4 (B)
93-100	5 (A)

2.14. Other (as the proposer wishes to add)

²-8 points (8 questions, every correct answer worth 1 point)

³⁻⁴⁰ points (written exam - 20 questions/ 2 points for each correct answer; a student must collect minimal 24 points in order to gain minimal 24 points. On written exam student can earn maximal 40 points)

POSITIVE IMPACT OF ANIMALS ON HUMAN HEALTH

REPTILE MORPHOLOGY

1. GENERAL INFORMATION						
I. GENERAL INFOR		14.0.1/	0			
1.1. Course teacher	Full Professor Srebrenka Nejedli	1.6. Year of the study programme	Second year			
1.2. Name of the course	Reptile Morphology	1.7. Credits (ECTS)	2			
1.3. Associate teachers	Full Professor Damir Mihelić Assistant Professor Ana Shek Vugrovečki	1.8. Type of instruction (number of hours L+S+E+ e-learning)	4+15+11			
1.4. Study programme (undergraduate, graduate, integrated)	undergraduate	1.9. Expected enrolment in the course	Depending on the interest			
1.5. Status of the course	Elective course	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	1			
2. COUSE DESCRIP						
2.1. Course objectives	Reptiles being nowadays common patients in veterinary clinics and surgeries, the subject "Morphology of reptiles" is meant to teach the students about: the systematization of reptiles; the variety of their body regions as to the locomotion, skeleton construction and musculature; fundamental differences in construction of digestion duct because of different ways of feeding, breathing and construction of respiratory organs due to the living mode (in water or on earth); construction of urinary and reproductive system; heart and blood vessels, particularly the relevant ones for blood taking; central and peripheral					
2.2. Course enrolment requirements and entry competences required for the course	nerve systems and their accessibility for local anaesthesia, etc. Appoint organ systems in reptiles, describe the structure of certain parts of the organ systems in reptiles, differentiate the morphologic characteristics of each system in reptiles, compared to organic systems in reptiles.					
2.3. Learning outcomes at the level of the programme to which the course contributes	Student content can recognize and classify it in the appropriate area. Will seek further clarification: from their mentors or literature.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Knowledge of the systematics of reptiles, knowledge of skeletal and muscular systems in reptiles, knowledge of the digestive, respiratory, nervous, endocrine, urinary and reproductive system in reptiles, knowledge of the circulatory system and for the extraction of blood in reptiles.					
2.5. Course content broken down in detail by weekly class schedule (syllabus)	their locomotion; 2. Locomoligaments and tendons); 3. oesophagus, stomach, interpretation (lungs, trachea, breathing & Blood conducting system (lungs); 6. Urinary armale and female sexual organisheral nerves, autonomolishers, 8. Endocrine system	es and their body forms and regi- otive system (appendicular head Importance of digestion system estines, liver, pancreas); 4. Respi- oy skin, ways of breathing on ear heart, blood and lymph circulation and reproductive system (construc- gans); 7. Nerve system (dorsal s- nic nerve system; frontal, central on (hypophysis, epiphysis, thyroid of, thymus, endocrine part of the p	musculature, (mouth, pharynx, ratory system th and in water); 5. n, blood tion of kidneys, pine, brain nerves, , posterior and small al and parathyroidal			

	Sensory organs (eye construction, vomeronasal organ, hearing organ); 10. Skin (epithelium, derma, olfactory glands).

SELECTED CHAPTERS IN BIOMEDICAL PHYSICS FOR VETERINARIANS

1. GENERAL INFO	RMATION					
1.1. Course teacher	Assist. Prof. Pašić Selim	1.6. Year of the study programme	1.			
1.2. Name of the course	Selected Chapters in Biomedical Physics for Veterinarians	1.7. Credits (ECTS)	2			
1.3. Associate teachers		1.8. Type of instruction (number of hours L+S+E+ e-learning)	20 + 10 + 0 + 0			
1.4. Study programme (undergraduate, graduate, integrated)	Integrated	1.9. Expected enrolment in the course				
1.5. Status of the course	Elective	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)	1			
2. COUSE DESCRI						
2.1. Course objectives	The aim of the course is mor physiological processes of liv	e detailed and better understand ring organisms.	ling of important			
2.2. Course enrolment requirements and entry competences required for the course						
2.3. Learning outcomes at the level of the programme to which the course contributes	Students will be able to use part of the physical laws for explaining and understanding of the most important physiological functions of the body of animals.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Students will better understand the role of electricity in the body of humans and animals. Students will be considerably better understand the transport of substances in living organisms by combining the laws of electricity and thermodynamics. Applying the laws of hydrodynamics (fluid) students will greatly enhance the understanding of blood flow and gas exchange with the environment. Students will understand much better thermodynamic interaction of living organisms with their environment. 					
2.5. Course content broken down in detail by weekly class schedule (syllabus)	Electricity in living organisms (sources of bioelectric potentials (voltages on the membrane of cells, heart and circulatory system, nervous system, muscles, senses, physical fundamentals electro diagnostics and devices for measurement and registration of bioelectric potentials (electromyography, electrocardiography, electroencephalography, electroretinography and electronystagmography)). (2 hours of lectures) Review of methods for electrical stimulation (electrical stimulation of skeletal muscles, respiratory organs, for the growth of biological tissues, and motor nerve system, pain relief). (2 hours of lectures) Transport of substances (active and passive transport of substances; physics transport properties of cell membranes; physical quantities associated with the capillary, the interstitial fluid and lymph; dynamic balance entering and fluid					

	secretion; physical fundamentals of gas exchange, diffusion of oxygen and carbon dioxide through the respiratory membrane). (2 hours of lectures) Biophysical properties of biological fluids and gases (flow models; physical fundamentals circulation; physical fundamentals method of measuring blood pressure and blood flow measurement; transducers in chemical analyzes of blood; physics of diffusion of gases and partial pressures of gases, devices for measuring characteristic parameters of respiration, physical devices that measure the concentration of gases of respiration). (2 hours of lectures) Interactions thermodynamic system with the environment (physics of regulation of body temperature and its disorders; equilibrium closed-system interaction with the environment; correlation of biochemical reactions and thermodynamics of the process, ways of storing free energy using membrane; measurements in bioenergetics). (2 hours of lectures) Seminar papers of students (10 hour seminars)

SPECIFIC ANATOMICAL STRUCTURES OF THE LOCOMOTOR APPATARUS OF THE HORSE

1. GENERAL INFORMATION						
1.1. Course teacher	Prof. Martina Đuras	1.6. Year of the study programme	1 st year, 2 nd semester			
1.2. Name of the course	Specific anatomical structures of the locomotor apparatus of the horse	1.7. Credits (ECTS)	1			
1.3. Associate teachers	Assist. Prof. Mirela Pavić, Assist. Prof. Ivan Alić, Kim Korpes, DVM, Magdalena Kolenc, DVM	1.8. Type of instruction (number of hours L+S+E+e-learning)	15 E			
1.4. Study programme (undergraduate, graduate, integrated)	Integrated undergraduate and graduate study of veterinary medicine	1.9. Expected enrolment in the course				
1.5. Status of the course	Elective	1.10. Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	Application of VEF-LMS			
2. COURSE DESCR	RIPTION					
2.1. Course objectives 2.2. Course enrolment requirements and entry competences required for the course 2.3. Learning outcomes at the level of the programme to which the course contributes	The course presents the specific anatomical structures of the trunk, neck and limbs of the horse and explains their role in the static and dynamic. Completed course "Anatomy with organogenesis of domestic animals I". Following successful completion of the course, students will be able to apply the acquired knowledge on specific anatomical structures of the locomotor apparatus of the horse during clinical courses.					
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Following successful completion of the course, students will be able to: 1. list and describe specific anatomical structures of the locomotor apparatus of the horse 2. identify clinically important structures of the locomotor apparatus of the horse					
2.5. Course content broken down in detail by weekly class schedule (syllabus)	1. Bones and joints of the forelimb of the horse (1 hours); 2. Bones and joints of the hindlimb of the horse (1 hours); 3. Muscles of the forelimb of the horse with special remarks on: m. serratus ventralis; m. triceps brachii; m. biceps brachii; lacertus fibrosus, m extensor carpi radialis; m. flexor digitorum superficialis; m. flexor digitorum profundus; m. interosseus medius, manica flexoria; bursae synoviales (4 hours); 4. Muscles of the hindlimb of the horse with special remarks on: m. quadriceps femoris, m. fibularis tertius, m. flexor digitorum pedis superficialis, m. flexor digitorum pedis profundus, dorsal patellar luxation; bursae synoviales; vaginae synoviales tendines (3 hours); 5. Muscles of the back, neck and the abdominal wall in the horse with special remarks on: m. rectus abdominis, lig. accessorium ossis femoris; ligamentum nuchae (3 hours); 6. Supportive mechanism of the forelimb joints (1 hour), 7. Supportive mechanism of the hindlimb joints (1 hour), 8. Supportive mechanism of the vertebral column (1 hour).

2. COURSE DESCR	RIPTION	·			
2.1.Course objectives	The course is focused on diseases of horses used in different equestrian and canine sports, as well as the police, hunting and other working dogs and male animals used for semen production in artificial insemination centres. Students will have the opportunity to visit different equine competitions; police, army, training centres for sport and working dogs, simulation of sampling for doping in horses etc. After completing this subject they will develop competencies for an analytical and precise approach to specific diseases of sport and working animals. Furthermore, they will learn how to use such animals in reproduction keeping in mind all endogenous and				
2.2.Enrolment requirements and required entry competences for the course	exogenous factors involved.				
2.3.Learning outcomes at the level of the study programme to which the course contributes	The majority of the course will be case-oriented and organized in the field. It will give students practical experience combined with self-explanatory examples designed for developing clinical skills and competencies from a general point of view. It is suitable for both small and large animal-oriented students since the majority of cases involved in the subject will be dogs and horses.				
2.4.Expected learning outcomes at the level of the course (4-10 learning outcomes)	-practical experience in different equine and canine sports disciplines -practical experience in the organisation and treatment of male animals in AI centres -practical experience in simulation of equine doping control -adequate treatment of sport and working animals depending on their use -adequate reproduction of sport and working animals depending on their use				
2.5. Course content broken down in detail by weekly class	veterinary patients 3. Mana	gement of AI centres 4. Formance 5. Competitions	Vet check and Doping control		

schedule (syllabus)	Canine diseases and consequences of long term work 9. Reproduction, breeding and selection of sport and working dogs 10. Reproduction in senior subfertile retired sport horses 11. ¹ – For activity on seminars and exercises student can get max. 10 points and min. 5 points. Activity on seminars is obligatory and is graded acording to successfully prepared and held seminar and for positivelly oriented answers with min. 3 points and max. 6 points (for positivelly oriented answers 0,2 points can be given, and for 5 answers it is 1 point). For activity on exercises (successfully performed practical part) student can get min. 2 and max 4 points (0,5 points per activity).

Number

Points Grade do 59 1(F) 60-76 2 (D,E) 77-84 3 (C) 85-92 4 (B) 93-100 5 (A)

2.11. Required literature (available in the library and via other media)	Title	of copies in the library	Availability via other media
	Swayne, D. E. et all. (2020): Diseases of poultry. 14th ed., Wiley-Blackwell, USA.		Electronic media

² – Before oral exam student have to prepare written seminar essay which brings min. 20 and max. 32.

³ – Oral exam gives 24 to 40 points. Student answers 10 questions, and for 1 question can get 4 points. Student can aply for the final exam with min 36 points.

⁴ – Final grade is defined quantitatively, with numeric point scale and a grade corresponding to that scale, from 1 to 5. With grade 1 (one) student is graded if she/he didn't pass the course, i.e. he failed on the exam. For each student its attendance and activity is registered in its personal form, together with its success on the colloquium, what teacher uses to form final grade.

programme (undergraduate, graduate, integrated)		1.9.Expected enrolment in the course			
1.5.Status of the course	regular (elective)	1.10 Level of use of e-learning (1, 2, 3 level), percentage of instruction in the course on line (20% maximum)			
2. COURSE DESCR					
2.1 Course objectives	The main course objective is to enable the students to acquire the necessary knowledge and skills in emergency and critical care medicine of domestic animals. Veterinary emergency and critical care medicine is the most dramatic part of the veterinary medicine, so resourcefulness and knowledge are critical for the appropriate management of emergency and critical patients. Main goal of the proposed course is to master the basic knowledge and procedures in emergency and critical medicine, so the student will be able to accurately assess, treat and stabilize the patient.				
2.2 Enrolment requirements and required entry competences for the course					

2.3 Learning outcomes at the level of the study programme to which the course contributes	Synthesis of all the acquired knowledge and skills, especially clinical knowledge, in the light of more accurate and efficient management of emergency and critical patients.					
2.4 Expected learning outcomes at the level of the course (4-10 learning outcomes)	After the successful completion of the course, the student will be able to: -triage emergency patients, open venous access, carry out ABC stabilization -diagnose and stabilize patients in shock (of various etiologies) -diagnose and stabilize emergency surgical patients -diagnose and stabilize emergency internal medicine patients -diagnose and stabilize emergency obstetric patients -diagnose and stabilize horses with colic -implement basic critical care					
2.5 Course content broken down in detail by weekly class schedule (syllabus)	1. Triage and primary evaluation and initial laboratory workup,2. Shock and fluid therapy, 3. Emergency bleeding and wound management, 4. Acid-base disorders, 5. Electrolyte disorders, 6. Respiratory distress, 7. Anesthesia and analgezia in emergency and critical patients, 8. Emergencies in cardiology, 9.Urinary tract emergencies, 10. Acute abdomen, 11. Emergencies in gynecology and obstetrics, 12. Emergencies in pediatric patients, 13. Emergencies in neurology, 14. Transfusion in emergency patients, 15. Procedures and protocols in veterinary emergency and critical care medicine, 16. Emergencies in ophtalmology, 17. Emergencies in endocrinology, 18. Critical care medicine 19. Equine emergency and critical care, 20. Small mammals emergency and criticalcare medicine, 21. Practicum					
2.6 Type of instruction	☐ lectures ☐ seminars and workshops ☐ exercises ☐ online in entirety ☐ mixed e-learning ☐ field work		independent study multimedia and the internet laboratory work with the mentor		2.7 Comme	ents:
2.8 Student responsibilities	1. Exercises attendance 2. Workshop attendance 3. Activity on exercises and workshops 4. Contiuing testing of knowledge 5. Final exam					
2.9 Screening of student's work (specify the	Class attendance Experimental	0,2	Research		Practical training	0,3

VETERINARY ETHICS

1. GENERAL INFO	RMATION				
1.1. Course teacher	Prof Krešimir Severin	1.6. Year of the study programme	1		
1.2. Name of the course	Veterinary Ethics	1.7. Credits (ECTS)	2		
1.3. Associate teachers	Assoc Prof Gordana Gregurić Gračner, Assoc Prof Dean Konjević Dipl. ECZM 1.8. Type of instruction (number of hours L + S + E + e-learning)				
1.4. Study programme (undergraduate, graduate, integrated)	Integrated	1.9. Expected enrolment in the course			
1.5. Status of the course	Elective course	1.10. Level of application of e- learning (level 1, 2, 3), percentage of online instruction (max. 20%)			
2. COUSE DESCRI					
2.1. Course objectives	The subject aims to introduce students with development, basic principles and application of ethics in veterinary medicine. Students will become familiar with legislation that covers areas of veterinary ethics and code of ethics on both national and international level. The goal of this subject is to teach students ethical principles in all aspects of veterinary medicine, especially in the scientific research.				
2.2. Course enrolment requirements and entry competences required for the course	None				
2.3. Learning outcomes at the level of the programme to which the course contributes	to learn fundaments of veterinary ethics that will be upgraded during the programme to enhance development of critical opinion in the field of veterinary medicine to improve human-animal-animal owner relations				
2.4. Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	to acquire knowledge on development of veterinary ethics and its differences between different countries. to learn and understand different aspects of observing human-animal relations to understand guidelines of veterinary professional ethics				
2.5. Course content broken down in detail by weekly class schedule (syllabus)	4. to apply ethical principles in all fields of veterinary medicine Lectures – topics (15) 1. Fundaments of veterinary ethics 2. Development of veterinary ethics with emphasis on the Republic of Croatia 3. Sources of veterinary ethics 4. Aspects of human-animal relations 5. Legislation 6. Code of ethics 7. Modern veterinary ethics and burnout syndrome 8. Veterinary ethics in animal breeding 9. Veterinary ethics in food production 10. Veterinary ethics in scientific research 11. Veterinary ethics and communication skills				

	Seminars - topics (15) 1. Animal welfare, animal rights 2. History of veterinary ethics in Croatia and neighbouring countries 3. Relevant (ethics) international legislation, description of ethical guidelines 4. Ethical principles related to clinical work 5. Ethical principles and wild animals 6. Preparation of scientific research 7. Evaluation of ethical principles and guidelines in accordance to veterinary education 8. Veterinary ethics in different countries

WILDLIFE DISEASES

1. GENERAL INFO	RMATION				
1.1. Course teacher	Assoc. Prof. Magda Sindičić, PhD, DVM	1.6.Year of the study programme	6		
1.2.Name of the course	Wildlife Diseases	1.7.Credits (ECTS)	2		
1.3.Associate teachers	Full professor Zdravko Janicki, Full professor Alen Slavica, Assoc. professor Dean Konjević, PhD, DVM	1.8.Type of instruction (number of hours L+S+E + e-learning)	4+0+26+0		
1.4.Study programme (undergraduate, graduate, integrated)	Integrated	1.9.Expected enrolment in the course			
1.5.Status of the course	Elective	1.10.Level of application of e-learning (level 1, 2, 3), percentage of online instruction (max. 20%)	Level 1		
2. COUSE DESCRI	PTION				
2.1.Course objectives	The goal of this subject is to teach basic principles of wildlife diseases, including surveillance, diagnostic procedures, pathogenesis, clinical presentation, epidemiology, pathology, prevention and potential treatment. Emphasis will be given on critical awareness of currents problems in wildlife diseases through case based examples, as well as examples previously reported in scientific literature. During the lectures we will outline interaction between different types of pathogens and hosts, the potential impact of diseases on the population level, especially on endangered populations, and impact of human activities on the spread of wildlife disease. This subject is complement to previous subjects on domestic animal infectious diseases, so knowledge gained during these courses is prerequisite for understanding this course.				
2.2.Course enrolment requirements and entry competences required for the course					
2.3.Learning outcomes at the level of the programme to which the course contributes	- broad overview of wildlife diseases, their impact on human and livestock health - protection of wildlife, livestock and human health - understanding of the effects of human activities, urbanization, and climate change on the health of wildlife populations				
2.4.Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Surveillance of wildlife diseases Prevention of wildlife diseases Diagnostic methodologies Therapeutic measures used in wildlife Assessment of the impact of diseases on game management and endangered species 				

2.5.Course content broken down in detail by weekly class schedule (syllabus)	In modern environment diseases of wild mammals are increasingly important field of veterinary medicine. Lack of wildlife disease surveillance is recognized as one of the factors that contribute to the spreading of emerging infectious disease and zoonosis. Course content: 1. Introduction – particularities of wildlife disease monitoring, diagnostics, prevention and treatment 2. National wildlife disease surveillance systems and the role of veterinarians 3. Post-mortem procedures, including working in field conditions, prevention measures and sample collection 4. Non-infectious diseases – natural hazards, poisoning, trauma, myopathy 5. Viral diseases of wild ungulates 6. Bacterial diseases of wild ungulates 7. Parasites of wild ungulates 8. Diseases of suide 9. Diseases of tarnivores 11. Overview of most important diseases in birds 12. Importance of diseases monitoring in game management and conservation of endangered species 13. Diseases of complex aetiology (Chronic Wasting Disease,, Epizootic diarrhoea syndrome in roe deer

USEFUL INFORMATION FOR STUDENTS

About Zagreb

City of Zagreb is the capital and largest city in the Republic of Croatia. It is a cultural, scientific, economic, political and administrative centre of the Republic of Croatia with seat Parliament, President and Government of the Republic of Croatia.

Area: 641.355 km²

Population: 800.000 (data from 2011)

History in brief: Written documents first mention Zagreb in 904, with founding of the Diocese.

In 1242, Zagreb (then Gradec) was proclaimed Free Town of the Kingdom by the Golden Bull of the Croatian-Hungarian King Bela IV. In 1577, Zagreb was for the first time mentioned in written documents as the capital.

In 1669, Jesuits found the first gymnasium and Academy. The year is taken as the year of establishment of the University of Zagreb.

In 1776, seat of Croatian King's council (Government) moves from Varaždin to Zagreb. On June 25, 1991, Croatian parliament proclaims independence and sovereignty of the Republic of Croatia. Zagreb becomes the capital.

Museums and exhibitions

Archaeological Museum, Meštrović Atelier, Croatian House of Visual Artists, Ethnographic Museum, Gliptoteka HAZU – Sculpture Museum of the Croatian Academy of Science and Arts, Hunting Museum, HT Museum (telecommunications and postal traffic), Croatian History Museum, Croatian Sports Museum, Croatian School Museum, HAZU (Croatian Academy of Sciences and Arts) Department of Prints and Drawings, Modern Gallery, Zagreb City Museum, The Mimara Museum, Museum of Arts and Crafts, Museum of Contemporary Art, Klovicevi Dvori Museum Gallery Centre, Strossmayer Gallery of Old Masters, Technical Museum, Museum of Broken Relationships, Art Pavilion.

Events

Eurokaz (The International Festival of New Theatre), Zagreb Philharmonic Orchestra Festival, The world festival of animated movies, Floraart (International flower and garden show), International folklore festival, Music biennale Zagreb, Week of modern dance, Zagreb Histrion Summer and other theatre performances and concert hall events.

Sport and leisure centres

Hippodrome, Jarun Lake, Bundek Lake, Maksimir Park, Medvednica (Sljeme) Nature Park, Mladost Sports Park, Šalata Sport Centre; Ice Rinks: Dom sportova, Šalata and Velesajam; swimming pools: Mladost, Utrine, Dom sportova; Ski resort Sljerme (10 km from downtown)

PAPERWORK

Keeping up-to-date with the paperwork requirements in a new country is never easy but it's worth the peace of mind. As foreigners arriving to a new country, it is our responsibilities to be aware of laws and regulations pertaining to our stays. However, any current student understands that this is not easy and we'd like to do our best to help this process along for you. Here is our interpretation of the rules, processes and expectations along with what we hope are some useful websites.

If you are non-EU citizen don't forget to have your passport presented (in case of visa, you should get the stamp) at the border when you arrive! Avoid the hassle by asking the border guard to kindly stamp your passport!

EU citizens need to present a national ID.

The official source of the latest information regarding the documents required of foreign residents during their stay is always Ministarstvo unutarnjih poslova, the Croatian police ("MUP") whose main station is located at Petrinjska 30. Their telephone number is +385 1 45 63 623. You can find lots of helpful and the most upto-date information on their website (www.mup.hr). (This is another website where the translate feature of Google can be very helpful!)

OIB

www.oib.hr

Shortly after arriving in Zagreb, you should get your national identity number "osobni identifikacijski broj – OIB"). You'll need this for many purposes including registering for classes in September. You can apply in-person at Tax Administration office, Avenija Dubrovnik 30, 10 000 Zagreb.

TEMPORARY RESIDENCE PERMIT

Be sure to check for info the latest on paperwork requirements and useful downloads on the portion of the MUP website pertaining to foreigners. The English version site is available at www.mup.hr/120009.aspx. Everything is quite well explained on the site but here's a summary of what you'll find. All foreign students staying in Croatia must obtain a "Temporary residence permit". The permission is valid for one year after which time, a renewal application is submitted. All applications can be submitted at MUP in Zagreb. All documentation must be in Croatian, using official translations when needed and none can be more than six months old.

The students, who need a visa for entry in Croatia, should submit the request to a respective Croatian diplomatic mission, while the students who do not need a visa, may submit their requests in the police station in Zagreb.

For additional information, a contact-person from Zagreb's Police Department is available at tel. +385 1 45 63 623.

While waiting for your permission to stay, you will be able to stay in Croatia legally on the visa. Be sure to check the Croatian visa requirements for your country. One month before the Permission expires, you'll need to be in Zagreb in order to resubmit similar documents and paperwork as in your initial application.

Something not mentioned on the pages of the MUP website but can be found in the "Aliens Act" which is available on the site for download, is that once you are the bearer of a Temporary residence permit, you will not be allowed to leave Croatia for more than 30 days at a time in order for your Permit to remain valid.

Another important piece of info that's not explicitly stated is that while you have a Temporary residence Permit, you will be required to participate in the Croatian National Health Plan.

Don't be surprised during your renewal application process when you're asked for a biljeg. This is a stamp that shows you've paid a small fee to the state for handling some paperwork. You can buy them at most Tisak news agents' stands. You'll need one at the tax office for your proof of having paid your health insurance and you'll also need one when submitting your application for renewal at MUP. It's a little tricky to know how to handle these as you may encounter that a price has changed from year to year and you'll only really know how much you owe once someone asks you for one. To be safe, check the MUP website for their current price of paperwork handling (they refer to it in English as a "revenue stamp") and arrive at MUP with a biljeg paper clipped to your application. In all other cases, wait until you're asked for one before dashing to the nearest Tisak.

PUBLIC TRANSPORTATION

The great thing about the city is how you can really get everywhere on foot! That being true, if you're not living in the immediate downtown or need to get out to the Jarun Lake or Maksimir Parks or just want to check out the tram system you might want to acquire a student tram pass. These passes are issued at any of the 13 Zagreb municipal transit system, Zagrebački električni tramvaj (ZET) and offices. The best bargain is with monthly or yearly pass. However if you are not ready for such a commitment you can get single or 24-hour tickets at a newsagent. In any case make sure you are covered because ZET controllers issue unpleasantly steep fines to riders without valid tickets.

There are three ways of public transportation in the City of Zageb – trams, buses and city railway. Zagreb Electric Tram (ZET, www.zet.hr) together with Croatian railway (www.hz-net.hr) conduct the public transport in Zagreb.

How to get a monthly or annual ticket ("pokaz") for Zagreb local transportation?- take a form for a monthly or annual ticket at one of the ZET main tram stations, such as at Borongaj final stop, at Remiza, Dubrava or in Marić passage which is close to Jelačić square, entrance from Gajeva or Praška - confirm the form containing a photo 3x3,5 cm in Students office at the Faculty - submit the confirmed form, "iksica" card and Students grade book "indeks" into one of the listed ZET offices to get your ticket printed. Issuing costs 30 kuna.

Student annual tickets are issued in October in the following ZET offices:

	from Monday to Friday	Saturday
ZET, Ozaljska 105, entrance East	7.30 am – 6 pm	8 am- 4 pm
BORONGAJ, tram terminal	10 am – 6 pm	8 am -4 pm
ZAPRUĐE, Ulica Zlatka Balokovića bb	10 am – 6 pm	8 am -4 pm
DUBRAVA, ZET terminals	10 am – 6 pm	8 am -4 pm
SAVSKI MOST, Savska cesta bb, tram terminal	10 am – 6 pm	8 am - 4 pm
TRG MAŽURANIĆA, Trg Mažuranića	10 am – 6 pm	8 am - 4 pm
ČRNOMEREC, tram terminal	10 am – 6 pm	8 am - 4 pm

At other times, student annual tickets are issued in:

- Marić passage, Mon to Sat, 6.30 am-8 pm
- Ozaljska 105, Mon to Fri, 7.30 am-6 pm

To get more information call ZET, phone: +385 1 36 51 478 or 36 51 479

Visit ZET website for useful information: http://www.zet.hr/

STUDENT RESTAURANTS so called "kantinas" or "mensas" (the student dining halls)

Meals, cafe, refreshments and cakes at affordable prices are served in student restaurants and cafeterias run by the Student Centre University of Zagreb. Services and offerings may vary in over 20 restaurants at various locations in the city, one of which is found at Faculty of Veterinary Medicine. The biggest student restaurant is located in the Student Centre, Savska 25.

At the time of publication, the kantina discount prices are available to students who have a Croatian or EU nationality, as being subsidized by Croatian ministry of science. These discount dining facilities will hopefully become available to all students of the faculty in the near future. Until then, you will have to pay a full price for meals at student restaurants; a complete meal will cost you approx. 20 HRK.

Internet at the Faculty of Veterinary Medicine

The Faculty of Veterinary Medicine is connected to the Internet by Croatian Academic and Research Network (CARNet). Computers can be used in the Library Reading Room and at student premises (Equus student club). Password is not needed for the access. Apart from those personal computers, there are computer classrooms which are mostly used for teaching. Undergraduate and graduate students are entitled to use public computers at the Faculty, to obtain their AAI@Edu.hr (EduRoam) identity (which is used as "electronic identity"), e-mail address as well as personal web page at the Faculty server. AAI@Edu.hr (EduRoam) electronic identity enables access at reduced price to a number of services, such as:

- scientific and research papers databases access (http://bib.irb.hr)
- CARNet public modem Internet access
- Mobile CARNet services (wireless Internet access powered by Vipnet service provider)
- XCARNet service (wireless access by B.net cable television network)
- MetroCARNet service (Metronet service provider)

Read more on the above listed services at http://www.carnet.hr and http://www.vef.hr/ict. A number of accessible services with e-identity has been constantly increasing.

Users account for listed services, AAI@Edu.hr identity and personal e-mail address can be obtained at IT Department (within the Library) by producing a studnet grade book ("Indeks") or student ID card ("X-card", "iksica").

EXAMS & OTHER ESSENTIALS

X-card

This is your official student ID card. For students with a Croatian and EU citizenship, this card also serves to provide discounts at students' restaurants and coffee shops ("kantinas"). During your first days in Zagreb you will have your photo taken (and it's the same photo you will have during the whole of your stay, so smile pretty!) and the card will be available approximately a week later.

LMS

This is the official communication site for all courses during all years of study. You'll be given a username and password during your first weeks here, so as soon as you can, log-on and get familiar with all its features. The administration regularly posts important

announcements here and documents such as course outlines and schedules are available for download. Some professors also provide course materials and use other interactive features of the site.

EMAIL

This is the official school email account: SquirrelMail. This account requires the same username and password as LMS. Some professors require you to use this address when contacting them and any new info posted to LMS routes an announcement here. If you already have an email address that you use and love, you may find it most convenient to re-route your SquirrelMail into your existing account.

Studomat

www.isvu.hr/studomat

Studomat is the website where all your information as a student is held and updated. The student ID number located on your indeks and x-card is the 'user name' you will use to log-in to this site.

All exam dates are posted on studomat. Students MUST "sign-up" here for their exams, usually 7 days in advance. Cancellations are also made via studomat and are usually allowed up until 3 days prior to the exam.

GRADE BOOK ("Indeks")

This thin, dark blue book is the permanent record of the classes in which you've been registered and the marks you've received at their completion. It is as essential as your passport: take good care of it! You'll need it in order to register for classes, to take your exams, to apply for your permission to stay, and any other time you need proof that you're a full time student (such as receiving the student rate for your tram pass).

Usually during the last few days of a course, students are required to present their indeks to the course co-ordinator for his or her signature. Obtaining this signature allows you to apply for the final exam. Eligibility for these signatures typically depends on class attendance and activities. When you pass an exam, the examiner fills in your grade and signs your indeks one more time. So remember to bring your indeks to both written and oral exams!

OTHER (HOPEFULLY) USEFUL INFORMATION

IMPORTANT TELEPHONE NUMBERS

In case of an emergency, Croatia has implemented Europe's wide **EMERGENCY NUMBER 112** which then transfers you to police, emergency or the fire department.

192 - Police

194 - Ambulance emergency

193 - Fire department

1987 - Road help

195 - Search and rescue on the sea

18166 - Weather forecast

18981 - general info

11888 - info about local and national telephone numbers

11802 - info about international telephone numbers

Crime figures rank Zagreb and Croatia significantly lower than most of Europe. Anyhow, you should keep your eyes on your belongings at all time.

POST OFFICES

Jurišićeva 13; 4811-090 (Mon-Fri: 07 am – 20 pm; Sat: 07 am – 13 pm) Branimirova 4; 4981-300 (Mon-Sun: NON-STOP)

RENTAL ACCOMMODATIONS

It is always a good idea to search for information on social network pages and student groups where you can find rent offers and other students looking for a place to stay and roomate (njuskalo.hr, gohome.hr, very known is Facebook group: Erasmus Zagreb 2014/2015 Official Group, rentinzagreb.com, homeinzagreb.com, sublet.com, realitica.com). You can enter search terms like "najam stana u Zagrebu od 350 eura").

The approximate average prices You may expect:

- single room: 150-200EUR + charges
- flat: 350-600EUR + charges

PHARMACIES 0-24

Central Pharmacy, Jelačić square 3 Dubrava, Grižanska 4 Ilica, Ilica 301 Ozaljska, Ozaljska 1 Siget, Avenija Većeslava Holjevca 22

NATIONAL HOLIDAYS

National holidays are important to remember while living in Zagreb because, if for no other reason, you need to plan on most shops being closed and classes cancelled for that day. Be sure to ask your professors about changes to your schedule for courses that run during a holiday.

January 1: New Years Day

January 6: Epiphany

Easter and Easter Monday

Corpus Christi: 60 days after Easter May 1: International Workers Day June 22: Anti-Fascist Struggle Day

August 5: Victory and Homeland Thanksgiving Day

August 15: Assumption of Mary November 1: All Saints day

November 18 Remembrance Day

December 25-26: Christmas - (University Christmas holidays 25.12.-6.1.)
